I have a channel programmed that is fully encrypted, and sometimes comes through with a loud 5-10 second squawk of static... wonder if its something like that.

  I’m not so worried about what the noise was since I was in a relatively high RF area of town, cell towers, mountain-top repeaters/transmitters, but now that all makes sense to me. Now I’m kinda embarrassed. I forgot all about the extra time that it takes to actually shut down after turning off the radio. That certainly makes sense. THANK YOU!

This takes about 5 seconds or so.

As for what the noise was, knowing what was shown on the display would
help greatly.

From: N1CHU
Topic: 1402 Message: 1406

The radio writes to the SD card when it is instructed to shut off using the on/off/volume knob. The order in which this happens is first you turn the knob to the off position. The radio's microprocessor senses that and takes a couple of additional seconds to write to the SD card, storing your current profile and any changes you may have made, and then shuts down. But it only take a couple of seconds to write to the SD card, not the 5 to 10 seconds you stated. And the volume increasing by itself is also interesting. But as long as you believe everything you described is normal, then great.

However, if it continues to happen, I would be thinking of reloading the firmware and formatting the SD card. Starting over as a new radio just delivered. It would mean you would have to load the firmware, the full frequency database and any FL's you have created.

Could very well be. I've never had much interference from the location I was in, but then I've never been there, with the mobile radio turned on, for such a long period of time. Fate may have just caught up with me.

1408. RE: [BCD536HP] Strange occurrence

Yahoo group: BCD536HP
Date: 2015-01-09 22:34:10 UTC
From: Ed (K9EDK)
Topic: 1402 Message: 1408

I simply forgot about the lag time between the radio being powered down and when it actually shuts off. I've also never paid attention to whether I still hear the audio during the shutdown/SD card writing process. This may very well have been quite normal, but the volume of the audio was very loud. Again, it could have been nothing more than location, location, location.

One thing I forgot to mention is that when I turned the radio back on, the radio did have trouble reading the SD card, but only for the zip code. I re-entered the zip code, and the radio seemed to work perfectly. I did take my laptop out later that evening and re-upload my configuration/FL files.

I would suspect perhaps mixing. Hard to say, though. Could also
have been a Close Call hit on an FM Broadcast station or pager.

From: albertoaxmx@...
Topic: 1410 Message: 1410

In the last post I learned a lot about our hobby and have some comments.
On occasion I was in a meeting with the people of Motorola said that some scanners ham can no longer detect the carrier of the new equipment is true?
If I have a spectrum analyzer I can detect these emissions?
Finally, if I set my scanner with this frequency to detect my scanner may be detected and the hearing.
I hope I was clear in my questions.
Thanks for your time

The kinds of carrier are different for FM analog and for digital QAM or other modulation techniques. However, the scanner can still 'hear' these carriers. It may or may-not be able to decode the digital audio or track certain kinds of trunked radio systems.

For example, Motorola sells a lot of APCO P-25 systems. These can be decoded and tracked by the most recent scanners like the HomePatrol series. APCO P-25 Phase-II uses TDMA multiplexing and can only be received by the 436/536 and the new HomePatrol-2 in Uniden's product line. Some other scanners can also decode Phase-II TDMA. A spectrum analyzer will still see these carriers as pulsed streams of digital data. Scanners can tune them but will hear a pulsating buzzing noise and no intelligible audio.

Motorola also sells lots of commercial MotoTRBO systems. These cannot be decoded by any commercially available scanner at this time. If you hear anything, it'll just be a buzzing noise.

That's a loaded question, as how 'new' are they talking?

If they mean the DMR stuff, Close Call will not hit on the DMR Simplex transmissions, but it will hit on Repeaters (being that simplex is only 50% duty cycle, and 20mS or so in length for each transmission while repeaters transmit 100% duty cycle - even if only one of the two slots are in use).

I believe P25 Phase II is the same.

Both can be received on a scanner (even the ones that won't trigger a CC hit), but the DMR cannot be decoded. Maybe that is what they were talking about. The P25 Phase II can be decoded.

Regardlesss of what they were talking about, a spectrum analyzer should see pretty much anything if your sweep time is short enough.

I suspect they were talking about simplex DMR (AKA MotoTRBO).

Good question. But the comment is rather general. I don't doubt there is technology available that might allow frequency hop/switching at such a fast rate a scanner wouldn't detect the signal. And I don't know anything about "spread spectrum", but I see cordless phones advertise this as a way to prevent others from monitoring conversations and wonder about how that works.

But with a the different modes of RF propagation and deliberate encryption techniques available, that General comment by Motorola is probably accurate.

As for your receiver being detected, yes, with the proper test equipment a receiver may be detected. Wherever it's tuned. Unless it has been built to standards that call for zero emissions, requiring shielding of circuits that emit spurious emissions, including hysteresis.

Now I have a question for you... Why are you asking about a scanner's capability to receive signals that are (most probably) deliberately intended NOT to be heard? And secondly, you want to know if technology exists that can detect a receiver listening to these forbidden signals? You just ran a very large red flag up the flag pole!

But I responded to both questions because taken by themselves, they are innocent in nature. However, I wonder how that paranoid FBI analyst, reviewing metadata, from these users groups might handle it. When you think about it it's a bit scary. I think back to 9-11and remember that female FBI agent who was ignored when she reported there were people taking flight lessons who had commented they only wanted to know how to fly once airborne, not interested in learning how to take off or land! And when the agent persisted was told to shut up! As it turned out, the reports were accurate and if pursued, would have exposed the hijacker terrorists, most probably preventing 9-11. Way to go FBI! They learned their lesson... but just a bit late. Be forewarned, they aren't going to ignore this stuff going forward.

Well, if they were talking about TRBO, it is detectable, monitorable,
and legal to monitor (unencrypted), so I'm not sure I would read as much
into the question. It was pretty vague as it is...

Joe,

You "wouldn't read as much into the question" is probably the impression we all have. I merely pointed out its not how we perceive it that counts. Glad I'm not the one who will need to explain motive to some authority following up on what is plainly two questions that cause concern. Maybe if they were asked separately they wouldn't have the same level of interest levied upon them. Interesting dilemma.

It's common knowledge that after 9-11 the FBI was under the gun to enact change-or the bureau would cease to exist-be replaced by Homeland Security instead of becoming part of Homeland Security. They enacted the needed change. And in the process increased staffing on a massive scale. To do just exactly what they should have done when they ignored the "I just want to learn how to fly once the plane is airborne" warning... Track down every concern, no matter how inconsequential.

Flying airliners into towers was unheard of before 9-11. It was incomprehensible to just about everybody-except those (FBI, etc.) who were in the business of second guessing the bad guys, and of course, the bad guys themselves.

I have no doubt the metadata collection is getting the scrutiny each item deserves... Just pointing out what I thought was the obvious... and not interested in debating the importance of the answers volunteered by us. It's all about the questions. They raise eyebrows.

Bill

There is no such thing as a "best antenna" for a wideband receiver like the 536. You can buy antennas for a narrow bandwidth that may be the best, but a wideband antenna is always a compromise. So the real question is where do you want to compromise? Which band(s) are most important to you? Which direction(s) do you want to monitor (or is your goal omnidirectional)?

That said, the Scantenna is a pretty good wideband antenna. There are single-band antennas that are better, but over the entire range of the scanner, I would recommend the Scantenna. If you have particular bands of interest, that recommendation may change.

I agree with all with the possible exception that I believe multi-story buildings were hit with aircraft previous to 9/11. That aside, as it's trivial, I understand your point. But there is also a time when you have to can't place too much emphasis on a question or you will find terrorists everywhere and have to bring foil hats into fashion.

As they say, hindsight is always 20/20. But, you can't devote resources to overturn every rock. Each case has to be assigned a risk vs reward evaluation, and if the possible reward (info of terrorist activity) is not likely, leave that rock and move on to a more likely rock. Otherwise, we will all end up working for DHS and will have to outsource investigations to research every rock.

Again, I agree with you in principle, but I don't see that the question was that much of an indication of illicit activity.

Gee. I hope they don't read too much into this or I'll lose my FBI clearance. :-)

A possible solution might be a beam antenna. It's a directional antenna that will give you gain in the direction it's pointed. ScannerMaster sells a scanner beam that used to be offered by Grove (The Monitoring Times Magazine people, now defunct). From what I hear, it's a modified version of a Radio Shack TV antenna. I use one with a cheap TV rotator. But it can still receive quite well off the sides (as it's not all that great at rejection) while pointed in the general direction you choose, saving the expense of a rotator. (With the money saved on the rotator get some LMR-400 or 600 ultraflex coax instead. They don't call it "poor man's hard line" for nothing.

Ideally, when we shell out better than $500 on a scanner, it means we are serious enough to give it as good an antenna system as available, cost being the only constraint. Come summer, my next step is to purchase a commercial beam, rotator and the best damn hardline for VHF/UHF available. Then I'm going to relocate from the 2nd story back porch to the top of the house, gaining about another 20 feet.

Again, I agree with you in principle, but I don't see that the question
was that much of an indication of illicit activity.

I don't think it was that much of an indication of illicit activity either. And maybe the analyst that catches it agrees with us too. But the point is none of us get to disregard it. It matters not what level of attention we think it should merit. The SOP's are explicit... All threats will be treated as credible until it is determined otherwise.

And coming from a security background as an Information Assurance Manager, requiring the need for secret, top secret, and Special Programs access, I don't care about you or anyone else loosing their FBI clearances. Hell, with all the ratings I had it still didn't mean a damn unless I had a "need to know". So it matters not how high your security clearance goes. I've restricted those with higher levels of clearances than I because they did not have compartmented need. And been restricted when the same applied to me! Don't you think I would have loved to visit the radio shop on my Son's Marine Corp base in Hawaii? But as they say... Request Denied!

IMHO A lot of wishful thinking here about metadata collection and analysis.
Yes the metadata collection and analysis works very well but here in Boston we had lots of metadata and we even had the Russian FSB telling the FBI about some bad people who we really ought to pay attention to.
Add in a triple murder in Waltham that should have been linked back to the suspects and you can count in another missed opportunity,,,

So the Marathon bombing still happened and good people died.

So forgive me if I take your analysis of a question about radio functionality with a bit of salt,,,in fact, using your logic, couldn't the fact that one wants to listen to police communications at all, make that person one of interest?

I have went through several antennas. I even spent $239 on the Austin "Ferret" antenna. The best all round antenna I have found is the Antennacraft scanner antenna. Here is a link:

http://www.amazon.com/gp/product/B001JT1KEG/ref=oh_aui_detailpage_o02_s00?ie=UTF8&psc=1

It is mounted on my chimney about 30 feet above the ground. It out performs that Ferret antenna by leaps and bounds (a dummy load could too). I wasted my money. The Antennacraft antenna comes with 50 foot of coax and the 300 ohm matching transformer. It covers all the bands my BCD536HP receives. With a little help from propagation, I pick up 800 mhz trunking from Birmingham 70 miles to my Southeast and several sectors of both Atlanta and Memphis Centers . For $55, you will be extremely pleased. The Austin Ferret? It sits in my closet gathering dust.....

Wow, someone finally gets it. YES, the paranoia is such that using logic, in its strictest sense, the deduction would be that listening to police broadcasts should be prohibitive. I do not want this to happen of course. But knowing what I know from my work experience with federal government agencies over the past 40 years, and the new constraints we were subjected to as a direct result of 9-11, the paranoia started. Everyone looking at each other with suspicions. It got to a point we were wondering just who was trustworthy and who was not! A bad state of affairs. By the way, it's not "my logic" as logic doesn't belong to anyone. It's a given, that all agree to as valid deductive reasoning. And the fact you listed additional "failures" to run down possible threats relating to the Boston bombings only validates the point I have made. Did you happen to hear the responses (after the fact) from those who were asked why nothing more was done? The pat answer is that they have learned from it and will redouble their efforts. Meaning yet another round of paranoia! Yep... Ain't we got fun. Sorry about the poor attempt at humor but needing to recognize our human failures along with our accomplishments presents so many contradictions.

Bill

On Jan 11, 2015, at 4:18 PM, Jim Keay reach147@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

IMHO A lot of wishful thinking here about metadata collection and analysis.

Yes the metadata collection and analysis works very well but here in Boston we had lots of metadata and we even had the Russian FSB telling the FBI about some bad people who we really ought to pay attention to.

Add in a triple murder in Waltham that should have been linked back to the suspects and you can count in another missed opportunity,,,

So the Marathon bombing still happened and good people died.

So forgive me if I take your analysis of a question about radio functionality with a bit of salt,,,in fact, using your logic, couldn't the fact that one wants to listen to police communications at all, make that person one of interest?

Again, I agree with you in principle, but I don't see that the question
was that much of an indication of illicit activity.

I don't think it was that much of an indication of illicit activity either. And maybe the analyst that catches it agrees with us too. But the point is none of us get to disregard it. It matters not what level of attention we think it should merit. The SOP's are explicit... All threats will be treated as credible until it is determined otherwise.

And coming from a security background as an Information Assurance Manager, requiring the need for secret, top secret, and Special Programs access, I don't care about you or anyone else loosing their FBI clearances. Hell, with all the ratings I had it still didn't mean a damn unless I had a "need to know". So it matters not how high your security clearance goes. I've restricted those with higher levels of clearances than I because they did not have compartmented need. And been restricted when the same applied to me! Don't you think I would have loved to visit the radio shop on my Son's Marine Corp base in Hawaii? But as they say... Request Denied!

Just for reference, that is the Scantenna. Not sure why they didn't
put that in the title unless they are showing the wrong pic.

You are never going to be able to track down every lead. Listening to PD prohibitive? The same can be said for any monitoring of government. So, where do you stop? File something under FOIA, you are tagged for investigation? We have not only the right, but the duty to monitor our government - from the President to the dogcatcher. That is one of this country's founding principles. When our government starts to hide things, that is when things to bad (and yes, that includes encryption of normal dispatch calls). Does it make it easier for terrorists? It might, but when you change your ideology, you play into their hands.

Simple point is that you cannot run down every lead. There simply aren't enough people on this world to do that, nor will there ever be.

Another simple point is that the terrorists WON shortly after 9/11. They don't have to do anything else to promote their agenda. The government and populous is doing more than they ever could do to make us fearful. The minute we changed our lifestyle, they won. It's that simple.

That said, I'm going to go back to the list topic.

Topic: 1415 Message: 1427

It will largely depend on what you want to hear and on which band it resides. If a single band, choose an antenna for that band, suffering a loss on other bands. For maximum coverage from far away, a directional antenna (beam or panel array) provides the gain in that direction but at significant loss to all other directions.

If multiple bands and omni is desired, the discone is about as 'perfect' as you will get. While it has no gain (or very little) it is resonant on many wide ranges.

Avoid the rubber duck antenna unless you're carrying it around on your hip. They are also known as semi-radiating dummy loads if attached to a transmitter. What works for transmit, works equally for receive.

Most of my everyday traffic is nearby. I use the stock antenna on the 536, upstairs. I use an external ancient Radio Shack mag mount on the 436 in a vehicle. However, I have used a TV antenna (32 element bow tie array for UHF) with the preamp to copy traffic from 95 miles away at 470 MHz. (I oriented the antenna for vertical instead of the standard horizontal). This is in hilly country and (by license requirement) that signal is supposed to be contained in that county. :o) That TV antenna also picks up very well on VHF (the broadband amp helps). It is certainly directional (25 degree bandwidth) and not for all cases, but it's sometimes fun to hear the place I used to work...

Only if you need phase 2 and have unlimited data plan for the wifi app (if it ever gets released) otherwise my opinion is no.

Wait I'm confused. The WiFi app allows me to stream from the scanner to my Android / iPhone device, right?

Why would that use up any data? (Note: DATA meaning mobile data)?

On my TiVo app, if I stream locally, it does not use anything but WiFi. If I am away from home and not near a WiFi hotspot, it uses the minutes on my plan.

If the Siren app will have similar capability, it would be the same.

The WiFi connection will only apply between the scanner and your home network. Once on the net, you will be subject to other charges unless using a public hotspot.

Think of it the same as using one of the streaming scanner apps. They use data.

And oh.... did that TiVo HD stream eat up a LOT of data quickly...

Been there. Done that. Got the bill. Fixed the roof.

Joe M.

I've been seeing this every now and then on my 536. I haven't done an analysis of it yet, but what appears to be happening is that the due to the dropping voltage from the vehicle battery the processor has gone a bit crazy.

One easy solution is to start the vehicle, or power cycle the radio. Either of these force a reboot of the radio and everything is fine. This started happening after the firmware change that corrected the loss of audio from time to time, especially when you started the vehicle. I think what you are seeing happening is the fault that caused the loss of audio presented in a different way.

When this happens it doesn't mean that the vehicle battery is getting to low, once you restart the scanner it can continue to run on the battery for additional time. Just something odd about voltages dropping past certain levels.

1435. Re: [BCD536HP] 536 RTC Battery

From: Rickey Singleton
Topic: 1232 Message: 1435

I had been noticing lately, that I was being prompted to enter the time on my 536 more frequently than what I had previously experienced (I listen occasionally so the scanner may not be turned on for long periods of time). With the recent "noise" about the RTC battery, I left my 536 on for over 48 hours and then turned it off. I turned it on the next morning and was prompted to enter the time. So, there is either something wrong with the battery or the charging circuit I guess. For now, I'm just going to live it and see if there are most postings about this issue.

Thanks for the feedback. I might get one of these this summer. I got $500.00 in the bank, but I need some other stuff to go with it, triplexer of some sort, so I can use my Yaesu VX6R handheld on 2/220/440 and listen to the scanner too. I'd also need a couple of adapters too.

anyhow, I think it'd be a good addition to the shack here.

There are a ton of other features over the previous model:

* Recording and replay capabilities built-in
* Display of much longer text tags
* System/Department/Site/Channel hold keys to quickly hold.
* Much improved alert light
* Much improved DMA memory - allows nearly unlimited data
* Zip code entry (for selecting what you scan)
* Selectable range entry
* Holds the entire USA RR database
* 100 Department/Site Quick Keys (up from 10 Group Quick Keys)
* 100 Favorite List Quick Keys for quick changing of multiple Systems

Not to mention the Siren remote control app that should be out soon.
(this is the main contention of some critics - Uniden had an issue with
a hardware vendor that delayed this about 9 months and counting)

There also may be issues with the display dimming and clock battery
charging on some units.

So, there is the good, the bad, and the ugly. Even ignoring the delayed
Siren app, it has a ton of features that make it much better than the
previous models. And I am confident that Uniden will come through on the
Siren app soon. Not sure when, but they will come through.

By contrast, I've been waiting for a two-way radio to be released. It
was delayed in R&D, but I can't wait for it to be released. As they say,
ca-ca happens. Until then, I'm on the waiting list.

Scanner runs on your wifi. The App you will be downloading in the App Store for your phone will use your data to connected to scanner unless you are connected to wifi on your phone. So unless you can travel on wifi everywhere you better spare 5GB my estimate if you plan to use the app on a daily basis without your phone connected to wifi 100% of the time.

???
I am streaming video over the Internet (WiFi). It's a camera I use to keep an eye on my grandson when he is napping. I don't pay additional fees because of it... The camera connects to my local area network wireless router just like my laptop.

My 536 is a base unit at home. I expect it will connect to my router in the same fashion as my laptop and camera. Where am I incurring additional costs?

I also have a 536 in my truck and understand that if I don't have the optional hotspot on my cell phone I won't have an Internet WiFi connection. The cell phone charges $50 w/4 gig for the option per month plus any overages. Using the 536 over a months time would probably put me over my 4 gig limit. I suspect that's what is meant by extra charges.

But I'm canceling my hotspot option on my cell. I got it and kept it years ago when public WiFi sites were scarce. Now that they are more peeve last I can save myself the $50 per month. Any scanner streaming I need will come from my 536 at the house using Comcast instead of Verizon.

On Jan 12, 2015, at 11:33 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

On my TiVo app, if I stream locally, it does not use anything but WiFi.
If I am away from home and not near a WiFi hotspot, it uses the minutes
on my plan.

If the Siren app will have similar capability, it would be the same.

The WiFi connection will only apply between the scanner and your home
network. Once on the net, you will be subject to other charges unless
using a public hotspot.

Think of it the same as using one of the streaming scanner apps. They
use data.

And oh.... did that TiVo HD stream eat up a LOT of data quickly...

Been there. Done that. Got the bill. Fixed the roof.

Amend my comments as necessary when you include Michael's reply. I had missed the obvious concern (duh) when your cell phone is not using someone's WiFi instead of the phone's ability thru the carrier's connections to the Internet. I was looking at it from the other end, using an optional hotspot on your phone, which costs money.

Just got one, nice radio but surprised at some of the OTHER issues (other than WI-FI)

For example, any idea why you need to use a serial cable for PC control of the radio while the USB port is only for data upload / download?
That's with the BuTel software, but an older GRECOM or Radio Shack uses a single cable for both with all the different vendor software.

The USB datalink cable needs to be unplugged each time to resume normal operation?

And plugged back in again so the radio senses the serial connection?
Unless there is something I am missing, this makes using the radio with your computer a pain in the butt.

You can use rsr232 serial DB9 on the 536 for PC control it's recommended.

Thanks Alan, that is a good cable, I apologize for being unclear in my question / observation.

I have an RS-232 cable that connects to the port that would normally be used for GPS connection.
I have tried both BUTEL an Proscan and control is fine.
However, in order for the radio to actually "see" that serial connection, you first need to have the front USB connection (a second cable) in place so you can select either Mass Storage or Serial via the radio keypad, when the radio is first turned on.

My question is, why does the serial connection only allow control of the device and not data manipulation?
Once you select serial mode, you can no longer access the data base and use that functionality without a restart of the radio.
Once you select data storage mode, you can longer access the radio for control purposes and a restart is again required.

From my perspective, in an age where we have devices that can sense presence on a data bus, this is awkward functionality. and I don't like tying up two USB ports to one device, in fact I don't know any other device that requires two physical USB cable connections for full functionality.
For example, PSR-600, one connection to the front of the device. Software allows upload and download of data from the radio and radio control is via the same cable and the control is another tab on the software. (Win500)

I suppose if the Wi-Fi functionality actually allowed you to do both operations, wirelessly from a remote client (e.g. computer) that would be superior., but since there is no wireless functionality,,,well,,,

Unless there is something I am missing, this makes using the radio with your computer a pain in the butt.

Amend my comments as necessary when you include Michael's reply. I had missed the obvious concern (duh) when your cell phone is not using someone's WiFi instead of the phone's ability thru the carrier's connections to the Internet. I was looking at it from the other end, using an optional hotspot on your phone, which costs money.

On Jan 13, 2015, at 12:34 AM, Michael O'Brien obrienphotos@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Scanner runs on your wifi. The App you will be downloading in the App Store for your phone will use your data to connected to scanner unless you are connected to wifi on your phone. So unless you can travel on wifi everywhere you better spare 5GB my estimate if you plan to use the app on a daily basis without your phone connected to wifi 100% of the time.

The rear port should not have that requirement, and should always be
active. It sounds like you are using the front port for serial rather
than the rear port. Have you set the rear port settings in both the
scanner and to match in the PC?

> My question is, why does the serial connection only allow control of the

Because the serial port cannot talk to the SD card which only 'speaks' USB.

> Once you select serial mode, you can no longer access the data base and

Neither does the 536. It only requires the one cable. You can omit the
rear cable completely and either control the scanner or write the card.

> For example, PSR-600, one connection to the front of the device.

Because both use Serial. People were criticizing Uniden for using serial rather than USB, so they added USB to write the SD card. The 996 series use serial both for control and writing the scanner's memory.

Thanks Joe, that helps a lot, I can get Proscan running with just the Uniden USB cable on both Windows 7 and 8.1 :-)

The problem has to be the old RS232 cable, I will purchase the one Alan indicated below, but my goal was only having one connection so I am good for now anyway.
Thanks again

Win 7 and especially 8 are issues of their own - especially with
USB-serial drivers. That may be the issue with your serial cable.

Specifically, some Win7/8 machines have updated drivers that won't work
with some adapters. But, it's working for you. That's what's important.

1452. Re: [BCD536HP] Now serial port use

Yahoo group: BCD536HP
Date: 2015-01-15 00:48:03 UTC
From: terry bill
Topic: 1429 Message: 1452

I was only successful with the rear port after following the setup instructions: From the scanner setup set the rear serial port to 115200 by selecting MENU, Set Your Location, Set Up GPS, Set Serial Port,115200 bps. FWIW, the serial cable I'm using was an old one when I started using it with my 396 in 2006

Apparently the using the front USB 24/7 in serial mode can be hit or miss.

Using ARCPRO I do everything, including programming, from the rear port. I really like the recording on the PC instead of the radio so that the radio can always be running and I can easily access and choose the recording(s) to playback whenever I want without losing any monitoring capabilities.

1455. Sentinel Question

Yahoo group: BCD536HP
Date: 2015-01-19 14:34:04 UTC
From: Paul Wolsko
Topic: 1455 Message: 1455

Every Monday, I download the new RR main database with Sentinel and write it to the scanner. Works just fine. I notice that there is a check box, the description of which is "Erase Favorite lists on sanner" . I never check it, but wondering exactly what this does? If I take it at its literal sense, I would expect to have no favorite lists - just the main database left on the card. But does it somehow refresh the favorite lists or something else? I cannot find anything in the doc that covers this Sentinel option.

Thanks,

Paul W.

It erases your FLs, then rewrites any set to do so from Sentinel.

Perhaps "Rewrite Favorite Lists" might be more accurate.

It's good to do that every so often. It keeps things in sync.

1458. Sentinel Question

Yahoo group: BCD536HP
Date: 2015-01-20 11:07:42 UTC
From: N1CHU
Topic: 1455 Message: 1458

Joe,

"It rewrites FL's"

Not sure I got the meaning of the origional question correct... And your reply, which I show above...

Updating the "master" database is understood. But rewriting my FL's after they have been deleted is confusing me. And since I have changed some of the names of the system's the master database uses, I expect the rewriting of my FL's isn't going to correct any changes in my FL's. Not that I expect that to happen even if I didn't edit the names.

So, just to be sure, my understanding of how it works is 1) update the database. 2) manually correct/update my FL's for the things that have changed. Is this a correct assumption?

Bill

"It rewrites FL's" --> It first erases all the FLs on the scanner. It then writes to the scanner the main database and any FL's in Sentinel that are set to be downloaded to the scanner. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Not sure exactly what you are asking, but checking that box erases any FLs currently on the scanner. You may want to do this if you loaded a different profile and you want to delete any FLs not in that profile (set for DL to the scanner).

You may also want to do that if you want to make sure your FL content matches Sentinel. (to undo any changes you made since your last write)

Does that answer what you're asking?

1461. Re: [BCD536HP] Sentinel Question

Yahoo group: BCD536HP
Date: 2015-01-20 21:10:26 UTC
From: N1CHU
Topic: 1455 Message: 1461

No, not really. My question has to do with that FL delete option we may avail ourselves of when we update the database. Since deleting my FL's is the last thing I want to do, (and see no advantage to having that ability globally) unless it INCLUDES an automatic update of any needed edits in my FL's.

I suppose the better way of answering my question is for me to state what I believe to be correct and see if you concur... So here goes...

It is my understanding that;
1) downloading a new updated database will NOT automatically update any portion of any FL I may have created.

...so it follows;
2) if I notice one of the systems I have included in an FL has had an update change in the master database, I will have to MANUALLY update that affected FL in order for it to be the same as what is listed in the master database.

I'm betting you concur?

From: MCH
Topic: 1455 Message: 1462

Yep. I concur.

Another case in addition to what I said below.

You add a new FL in Sentinel, but if you write that as-is to the scanner, it will be at the end of the list. So, you would want to erase the current FLs so the FLs are in the correct order in your scanner, which they will be when they are all written at the same time.

So, there are at least three cases where erasing the scanner's FLs first would be useful. You may not want to do any of those, but others do. So, the erase FL option may not be of any use to you.

Yahoo group: BCD536HP
Date: 2015-01-20 21:36:45 UTC
From: N1CHU
Topic: 1455 Message: 1463

Yea, I could really get into it and utilize all the options, QK's, etc., but I've got my various FL's set up (I use Butel software) and merely load or unload them as needed. I know there are additional options that would make any switching process easier and quicker for me but for now I'm happy. As time goes on I will explore those other abilities at my leisure. That way I will always have something new to discover with the scanner instead of plowing through each and every facet leaving little to discover later. Upman said the X36HP's are going to be the flagship radios for years to come so I figure I've got time.

On Jan 20, 2015, at 4:26 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Sound like what my 436 did - audio on digital was ok, but no analog audio.
I played with recording - not sure what I did, maybe hit replay or made
a recording. It came back and has been fine for months.

What he means is plug in a speaker or headset several times to exercise the connector. Sometimes dirt or worse gets in there to not allow a connection with the internal speaker.

If you have some, a TINY drop of contact cleaner can be applied on the plug as you exercise it.

Rick, WA6NHC

iPad = small keypad = typos = sorry ;-)

Assuming you are talking about the Scantenna, it is fully assembled. You just need to extend the elements 90 degrees until they lock into place. The box is about 53" long and maybe 6" wide.

When the weather improves, I will get the itch again and look at directional log-periodics. Possibly a dual array, vertically polarized. At which point pictures are a must for posting.

I am trying to regain reception of Bradley Intl Airport, about 20 from me. My previous scanner beam antenna had no problem catching the airport. But it was mounted 20 ft higher than my present beam, an identical replacement for a storm related damaged previous one. Then I considered an upgrade to something of a commercial grade, possibly aircraft band directional antennas for improved gain. The rest of what I listen to is already strong enough where side rejection won't be a factor but I'll mount the antennas on a rotator anyway. Add on some good coax like LMR400 or LMR600 (maybe look at hard line also) and if I don't hear the airport I'm moving closer!

The problem with the Elk log-periodic is that it's too short and has too short maximum length elements to be resonant much below 144 MHz or above 450 MHz. Almost all log-periodic antennas are limited to about 1 octave of acceptable performance tuning range.

Now, redesign the Elk for 118-236 MHz and a second harmonic from 236-472 and maybe a 3rd harmonic from 472 to 944 MHz and you'd really have something... I'd imagine it would be a) expensive and b) quite unwieldy. Now a good Discone, though unity or negative gain, does have a really wide bandwidth.

Why not buy/build a 700 MHz antenna then? It would be lossy on lower bands if you want to hear them too, but lower bands often run more power and that may be enough to compensate for the loss. Such antennas are available in omni or directional (beam) arrangements.

At 700 MHz, one should also consider replacing coax with hard line, should the run be more than 25' or so (and if still coax, use RG-8, not -174). The loss in coax can offset much of the antenna gain.

If the non 700 loss was too high, a diplexor could be used to merge multiple antenna feeds into one. You can get one with an internal amp or use a standard TV antenna amp (which covers 54-75; 300-900 with a trap for FM channels if you want wider coverage). Such an amp should be placed AT the antenna (hard line to the radio location, pigtail from the antenna to the amp). I've used a TV antenna on a flat panel array, low gain on VHF, a LOT on UHF (18 dbi gain).

I live in the foothills and I can listen to MERA (Marin, 90 miles direct) on 470 MHz. using that TV antenna and amp as described (but I turned the elements to vertical instead of the expected horizontal configuration). According to their license requirement, this is not possible to do but the radio waves don't know about the license rules. :o) With the amp, that's over 30 db of gain (a lot!) and it's killer on the local VHF bands too, even pointed in the 'wrong' direction.

Its good to understand the physics, the WHY you make the choices. The remaining issue is monetary, the budget.

Rick, WA6NHC

Try reducing the antenna to the least size you can. A 700 MHz. quarter wave is about 3" tall. (A paper clip will do for a test.)

In your case this would provide zero gain and would allow one site to capture others.

Using the ATTenuator feature may provide further relief.

Because simulcast systems are on the same frequency - you can't lock out
that frequency without locking out the same one (if you follow).

My take on that was locking out a site locked out any received frequencies sent from that site, that other unlocked sites transmitting on the same frequency would still be received. I listen to just a couple of sites on the Ct. St. Police. Troops H, W, and L. I've locked out sites that are either out of range or troops that I don't care to hear and it works ok. All of those troops that I've locked out were done using geographic sites, not the troops themselves (for the most part). If what you are saying is true, I must be missing transmissions. So now I'm going to use an additional scanner, without the sites locked out and compare. Let you know how I make out.

That is a physical impossibility (against the laws of physics).

While it's true that site may be locked out, and only the other site shown on the display, if they are transmitting on the same frequencies you will receive both if they are in range. And if the one site isn't in range, it cannot cause simulcast interference.

But, if you have two sites that are simulcast, they should not be programmed as separate sites anyway.

That's correct Joe, the different towers are using the same frequencies. My scanner shows that it's receiving very strong signals but many times (though not all the time) it won't play audio. In my research I'm seeing the 436/536 does a much better job with the problems the simulcast creates. I have tried using smaller antennas, and my next experiment will be in trying a directional antenna--not for gain, but rather to isolate the incoming signal to just one tower...Regardless, I'm certain I'll end up buying a new scanner.

I use a Yagi on a rotator and it does a great job on SAFET . you can get them in all kinds of gain variations including zero gain.
If there's a major incident I just rotate the antenna to the site I want and listen. Its only 21' up but it works great. I can actually pull in sites from Michigan, Ohio, Illinois and Kentucky and I am just East of Indy by about 5 miles.
Its really great when using Unitrunker as I have copied the Univ. Of Michigan trunked system down here with it. I even get the Univ. Of Cincinnati 900Mhz system here.
The antenna cost about $78 but I forget who I got it through. The one I have is a 15db gain. It also works very well at keeping out some nearby simulcast sites from interfering as well. Its an Antenna Specialist Yagi.

It may be that I am describing a totally different issue, with different frequencies used but transmitting the same audio. The old Simulcasting definition, as we know it on previous systems.

Meaning we are not on the same page. And that's my fault. I'm on the wrong page.

As I don't have simulcasting issues, I will bow out. Sorry to have interrupted.

Enjoying your posts,

Bill

No problem at all. That is a zoned (AKA multi-site) system if it is using different frequencies. It doesn't help that different industries use the terms differently. You can also have a zoned simulcast system that has several towers on the same frequencies in each zone.

That said, you may lock out the various zones or sites separately.

got my 536hp up and running. Receive is great on it. i also went with the scantenna and it is very nice, receive is great on it as well.

i activated priority channels(2) and worked fine. Now i have redone my fl a couple times and priorty wont work. I have double checked all and it is all set right. When I activate Priority scan, readout says, Priority Scan. No Channel. I checked every setting and nothing is avoided. So I am lost. I have changed priority channels to off and on and rewrite to scanner and still nothing. My 2 channels have the P on them showing they are set for Pri. Channels. ???????????? Any sugesstions... Tnx Gentlemen,,,,,,,,Mark, K9DEA

Question #1

I’m sorry to bring this up again, but I can’t find what I’m looking for in the previous message. I’ve followed all of the threads about the clock batteries in the 536, so I’m aware of the problem, but looking back through the messages, I can’t find if a solution has been identified, other than to keep the radio turned on and plugged in to a power source. Does anyone know if Uniden is working on resolving this issue or if it’s been resolved, or just a design flaw that we’ll just have to live with? I have a watch that’s still running on the same battery for about 10 years, but the clock battery in the 536 doesn’t even come close. Leaving a radio on in my car, just to keep the clock battery charged, seems kinda senseless.

Question #2

I love the Sentinel software for programming my 536, but use the ARC software to log the hits on the radio. In the past, I’ve had 2 different radios in the house and could use ARC396 to log entries from one radio and ARC996 to record hits on the other radio. I currently have a 436 and a 536, but I can’t log from both radios at once since they both utilize the same ARC program. Is there any other software out there that can log from either radio so that I can continue logging from 2 radios at once?

Thanks a million

Ed

You can run multiple instances of ARC change the usb port to the appropriate radio before clicking start

If the clock problem you are referring to is the one where you have to leave the scanner plugged in and turned on for 50 hours then my understanding is that it is neither a problem or a design flaw and therefore there is nothing for Uniden to fix. My understanding is that Uniden purposely designed the battery so that it needs to be charged every so often, I guess their reasoning is that most people will use the scanner often enough to keep the battery charged after the initial 50 hour charge.

My guess is the OP is talking about how the RTC seems to 'fail' as it has on myne. I've left the scanner connected and on for well over 50 hours, and then set the clock. But if I leave the scanner off for more than about 7 hours, it loses the time.

I submitted a ticket with Uniden, they said it needs to be sent in for warranty repair.

While Uniden’s instructions for charging the internal RTC battery is not a problem, THERE IS a very big problem concerning the RTC batteries in some 436s and 536s. Several have already reported the PROBLEM where their 536s will no longer HOLD THE CHARGE and demand that the clock be set after the scanner has been turned off for as little as 5 minutes. Several, including me, have reported the same PROBLEM with the 436s.

Actually, based on my personal experience there is a "real" problem with the battery or the charging circuit. I recently left my 536 on for 48+ hours and then turned it off. The next morning, I was prompted to enter the time so the battery was not holding the charge.

Thank you all for your responses. I'm sorry if I stirred this one up again. It's an annoying problem that I feel should be easy to resolve, but I'm by no means technically skilled enough to know what reasoning there may have been to do things the way that Uniden has done them. I just keep thinking that I have old watches that are still running after a decade on the original battery. Obviously it's a different technology.

My problem is that the radio is in the car. It has a constant 12VDC power source, and still I'm prompted to enter the time after the radio has sat idle for a few days (I haven't yet been able to determine exactly how many days). I guess my real question is if this is a problem I'm going to have to live with, or is there a fix available from Uniden that will do away with the problem? I'd even be OK with changing the battery out every few years if it were user-serviceable, but it would have to last longer than a few days, or weeks, to begin with.

Ed

That’s probably the part I didn’t understand, and now it makes more sense, although I guess I wonder why they went this route instead of a separate battery, but, like I said, I’m a bit technically challenged at times.

Thanks,

Ed

Topic: 1495 Message: 1505

This clock battery thing, with people reporting its just a user problem, that the user is not doing something correctly, has me wondering why it is that I never experienced any problem with the clock battery. Especially when my 536 came out of the box, got installed in my vehicle immediately, and I never had a problem. I did NOT first plug it in and leave it on for 50 hours as per instructed. And my installation incorporates an automatic power switch that divorcees all power to the gear in the radio console, 536 included, two minutes after I shut off the ignition.

One would think anyone divorcing power in this manner (instead of using the power on/off switch on the radio) would cause the 536 to object and let its owner know about it in some fashion. But the only thing I have to remember is if I make a program change (lock something out or on for example), and I want to save that change, I need to manually switch the radio off in order to let it write to the SD card.

So I don't understand why it is people are experiencing the need to re-enter the time each time they turn on their 536 as a result of something they either did or didn't do. Mine automatically boots up when I start my vehicle/shuts down when I turn off the ignition switch and never has been left on for 20 hours straight, never mind 50 hours. So if I can have a setup that works, I'm thinking there is a defective component, a bad batch of chips, for example, that cause this problem, causing certain "production runs" to have the problem.

Weren't we mapping serial number groupings trying to narrow down those radios with the problem? What became of that? And those who sent theirs back for repair, how are they making out with their repaired radios? Do they still have the problem or has Uniden found a corrective action?

Bill

That is a bet you will loose. The power is completely isolated from my radio console when the vehicle Is off. I run a large gauge power cable directly from my vehicle battery (appropriately fused on both positive and negative legs) to the input side of the automatic switching device. The output side feeds the plus and minus busses inside my console where all powered devices are connected. When I installed the console I metered everything for continuity and voltage levels, making comparisons in order to verify all voltage levels were the same, be it power off (zero) or on.

I would like to tell you I have an option to toggle the clock on or off, and have it toggled off, thereby eliminating the need to reset the time each time the radio powers up. But since there is no such option... you see the dilemma, my 536 is telling the correct time.

It's got to be a defect of some kind related to a component within the radio... Doubting an engineering flaw in the design of the 536 leads me to believe it has to be some bad part that got by a quality control inspection and was installed. If mine works, and yours doesn't, and both radios are identical (programmed and operated within accepted parameters), what's left?

It is an interesting topic. I am still waiting for all the other "heavyweights" to weigh in and offer some credible replies to the questions I posted. I'm no expert on the x36 series but this Yahoo group has the best resources I have found to date.

Like any battery, it is not necessary to charge it all at once.
While it may be preferable to start with, it's not required.

Several short charge cycles may be better than one long one.

Huh?
You're saying you *don't* have enough power getting to your scanner?

John does raise an interesting point, however. Maybe those with issues have some as yet undetected issue that is not obvious - such as lower voltage running to the scanner that results in the battery not charging.

Or maybe there is a firmware issue that it only charges while scanning trunked systems (I've seen stranger things).

Bill, the issue you raised (QC issue with the batteries) is one of the most credible possibilities I've heard. While not the first time I've heard it, it does seem plausible. It could also be a bad solder joint on the battery or some battery defect.

As not everyone has the issue, I think that rules out a design flaw. So, that leaves 'environmental factors' if it's not the QC issue or battery QC issue. I would think Uniden is seeing enough scanners with the issue that if it were a QC issue, they would know about it by now.

All that said, I would have preferred a backup line similar to what your AM/FM radio has over the more user-friendly all-in-one design.

Anyone remember the 210 series that used the 9-volt for clock backup?

Thanks Joe. Observation noted. But my comments you reposted are more of a sidebar. The real question is why are there a few radios out there with this battery reset problem? Sorry if I'm asking something that has already been addressed, but has a cause been identified? How close is my guess about defective components being the cause? Or was it maybe a firmware tweaking that fixes it?

Bill

I would guess that those few units having the issue might have bad batteries. That happens, and batteries seem to be getting worse instead of better the past 10 years or so.

1516. Has Siren App Intention Changed from WAN to LAN-Only Access?

Yahoo group: BCD536HP
Date: 2015-02-02 02:00:42 UTC
From: photo58625@...
Topic: 1516 Message: 1516

Uniden materials previously described the long awaited Siren app functionality as:
...the WiFi functionality allows for never-before seen features: App connectivity to your smartphone or
tablet from anywhere in your house, your car, or the world.

However I noticed the Uniden web site product page listing today reading a bit differently from other, previous Uniden materials:
...the Wi-Fi feature lets you use the exclusive Uniden Siren App on your smartphone or tablet to access your scanner from anywhere in your home or vehicle+.
The first description indicates access over the Internet while the second description could mean access limited to a local area network.

The "+" is interesting, and could also denote no changes of intention for the app. However, I just wanted to see if anyone knew if the scope of the Siren app functionality has changed?

Thanks!

Mark

Joe,

That "low power" excerpt is in relation to my comment about my never charging the clock battery by leaving the radio on for 50 hours... And never having a problem with resetting the clock each time I turned it on. It was a suggestion that possibly a little bit of power was getting by my automatic on/off switch... And that power was enough to initially charge the battery. Not so but that's what that was all about.

From what you have related, I guess no one knows what Uniden has learned. I wonder why a capacitor discharge process isn't used instead of a battery like in the old days. Maybe too much needed circuitry?

On Feb 1, 2015, at 12:53 PM, MCH mch@nb.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

That wouldn't be my first question... But then, my 436 and 536's never had that problem...

Find the fault on one radio. Then fix it. If that same fault is also found on the other radio, all well and good. But needing to learn if both models suffer from the same thing before looking for a cause isn't necessary.

My first question would be "what can I do to disable the clock whereby I would be able to turn on the radio without needing to re-set the clock each time? ... But I never needed a radio that doubled as a timepiece. Since I don't use any of the features that needs a clock (there might be internal behind the scenes needs for a clock I'm not aware of), I wouldn't miss it. Frankly, I just look at my wristwatch when I want to know how late I'm going to be!

OK. I read John's comments differently, but maybe he will report to clarify what he means.

There isn't much difference between a capacitor and a rechargeable battery from an operational standpoint.

The reason the HomePatrol family have a RTC in the first place is so they can properly name and keep track of the files on the microSD card. When you record to the card, you have to name the files. The names contain the date and time of the recording so you NEED an RTC chip which is synchronized with the actual time and date.

Bob,

Thanks. I know about file structure in general but never guessed the radio needed a day/date stamp as a way to sort files. If that's the way Uniden set it up, so be it. I certainly don't object.

Thanks for the input.

Bill

I thought more people were experiing this in the 436? That's where I'm seeing the RTC failure. And trust me, not much you can do 'wrong'. Run the scanner a good 48 hours. This is supposed to charge the RTC. Turn scanner off. Turn it back on a few hours later, and rtc clock is reset.

From: John
Topic: 1495 Message: 1525

Sorry I missed this Joe, been a bit crazy here.
Anyway I am thinking some of the issue isn't with the charger being used, specifically some laptops/netbooks as their power doesn't appear to be up to spec on USB power and many phone chargers are all over the place with voltage and current.
I have been testing both laptops and USB phone chargers and its surprising the differences even between one manufacturers different models and the voltage and current output to the 436. One phone charger takes 4 hours longer to charge the 436 than all the other chargers I have tried. One laptop and a netbook take an hour and a half longer to charge than another laptop and the only thing that I found really descent was a desktop. I also have a couple USB hubs I got off Amazon that have separate power source and those are as good as the desktop computer. Only one of the phone chargers works very well and that is for a Droid Max but it died the second time I tried to charge the 436 with it.
Anyway I think what may be happening is many USB ports don't put out.enough to charge both the batteries and the RTC battery too and get it done in the time required. It may take a longer charge time by several hours like the one that took 4 hours more.
I tried 7 different types of phone chargers.
One other thing I found is those who use laptops/netbooks is to make certain your not allowing USB ports to sleep as this will either cut off all power or limit the amount of power to the port and it won't charge at.all or will lower it too much to get a full charge.

Nope... don't use a USB charger (have always charged externally), and this doesn't address the 536.

1527. Batteries vs caps

Yahoo group: BCD536HP
Date: 2015-02-03 11:32:38 UTC
From: N1CHU
Topic: 1527 Message: 1527

Joe M.,

"There isn't much difference between a capacitor and a rechargeable
battery from an operational standpoint."

Thanks Joe. I was wondering if anyone remembers examples of radios that used the capacitor instead of a battery to retain memory when not plugged in. Another point I wonder about is capacitors vs batteries... Which last longer? I can remember replacing batteries but never caps...

Bill

Batteries are better, capacitors will discharge eventually and not recharge until power restored to circuit.
Its been awhile for me, but there is a formula for how long a cap will hold a charge in a circuit when un-powered.
Some caps can hold a large charge for long enough to zap you good after power is removed.

.It depends on the type of cap and its capacity vs load on how long it takes to discharge it.
However caps have a much longer lifespan than batteries which break down faster due to the heat they generate

Agree, but most of the computer motherboards I have seen use batteries for CMOS settings, with usually a two or three year life-span, which might very well be the functional life span of the board.

I have some motherboards that have been sitting idle and one is at least 10 years old and the battery is still good. That said, most systems are built to only last so long, 2-3 years which is what keeps the industry alive. If computers were made to last like Model T's the industry would fold up, or computers would be extremely expensive. But then today nothing is really made to last.

1533. Firmware Release for Remote Wifi / App support

Yahoo group: BCD536HP
Date: 2015-02-06 16:10:32 UTC
From: Uniden UPMan
Topic: 1533 Message: 1533

http://info.uniden.com/UnidenMan4/BCD536HPFirmwareUpdate Oh, what is it? It is Phase 1 of our app-supporting firmware release. It includes a new version of Sentinel that will apply updates to both your scanner and Wi-Fi dongle, allowing them to be accessed over an internet link. It also includes a PC based remote-control utility and instructions for installing VLC to get the audio stream from the scanner. Current plan is to incrementally improve the remote control support in 5 phases over the next few months. This gets us to being able to operate the scanner in scanning mode over a IP link. Future updates will add support for additional modes. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

If we're running 436 & 536, will we be required to keep the now older version of Sentinel installed for the 436?

I'll add that both WiFi dongle were working fine under firmware 5.01, showed connected, etc. Now the WiFi dongles won't work at all on either device I've run this firmware update on. Basically dead in the water with this new update…

Error Code 4, no firmware version showing on the WiFi dongles now

Date: 2015-02-06 17:54:28 UTC
From: Rick WA6NHC
Topic: 1533 Message: 1540

I downloaded the new Sentinel, no problem.

I installed the new firmware, BIG problem. Error Code 4

I reformatted the uSD card, cleared the user data and tried again, same issue.

My take is that the server copy of the firmware is corrupted. Is there an archive of older firmware so I can use the scanner again?

Without this, I can't go further and it's bricked the scanner.

Ok, it's the WIFI that isn't updating, not the scanner. It is not bricked. Whew!

But something still isn't right since it won't update the dongle.

Is there a more direct approach, like an app that will update the dongle via USB withOUT the scanner as the middleman? I have the USB_serial driver installed...

Unplug the dongle and restart the scanner. In a few seconds, it will stop whining about waiting for a connection and the scanner returns to normal ops. (HUGE sigh of relief)

The wifi dongle update feature is broken. If the dongle is left connected, the scanner will NOT work around it.

With the new firmware is loaded, the dongle DISconnected, the scanner works. Unplug the dongle until the next upgrade is released OR there is a means to connect the dongle to a computer USB for firmware update.

Rick,

This is the exact same issue I’m having with two of these units. Both have the firmware of the scanner updated, but the WiFi dongles are now useless. Firmware Updater Error Code: 0004 and they no longer work…

Once again, unplug the dongle (for now) and the scanner times out
looking for the dongle, then it runs normally.

Frustrating, I get that. But until this is resolved, it's the only way
to continue scanning.

Hi,
I downloaded it and applied it per the instructions and the radio is functioning fine.
I also updated the database afterwards with the new version of Sentinel, no issues noted.

Not sure how to test the Wi-Fi at this moment,
Jim K.

Tried that. It immediately jumps to the error code 4 and hangs until
you unplug the dongle.

I also tried the USB Serial route for the Wifi dongle update on Win7/32
(yes, I installed the right version). The updater program itself won't
run so even if the firmware is released by itself, that route is blocked.

At least I can scan with the dongle unplugged.

If we're running 436 & 536, will we be required to keep the now older version of Sentinel installed for the 436?

...followed the instructions and am now listening to 536 audio on my laptop...

The crazy thing about it is before today all I got were memory issue errors when attempting to update dongle firmware. I finally gave up and resigned myself to waiting for what happened today. The other posts say the dongle took the previous update-mine didn't. And again, mine works with today's firmware and others don't! So I'm having just the opposite results? Go figure.

Bill

Unplug the dongle and restart the scanner. In a few seconds, it will stop whining about waiting for a connection and the scanner returns to normal ops. (HUGE sigh of relief)

The wifi dongle update feature is broken. If the dongle is left connected, the scanner will NOT work around it.

With the new firmware is loaded, the dongle DISconnected, the scanner works. Unplug the dongle until the next upgrade is released OR there is a means to connect the dongle to a computer USB for firmware update.

This did not occur on any of the 20 units we tested the procedure on. I have engineering looking into it. For now, just unplug the dongle and scan normally. If you don't want to have to wait for the error message timeout, go to the FIRMWARE folder on the scanner and delete the "BC-WF1_V7_28.bin" file. 1556. Two headphone jacks?

Yahoo group: BCD536HP
Date: 2015-02-06 19:40:09 UTC
From: Evan Platt
Topic: 1556 Message: 1556

Sorry if this is in the manual but looked and didn't see it...

I have a friend who wants to set up the 536 in a tow truck. They want to have a speaker in the cab, and be able to rebroadcast the audio through a external speaker (essentially a siren unit). Are there two headphone outputs on the 536 - one for a speaker and one that can go to a siren unit? Or how is this commonly done in these types of installs?

Thanks :)

1557. Re: [BCD536HP] Firmware Release for Remote Wifi / App support

This sounds like a 'normal' growing pain. :)

If I wait for full boot up, THEN plug the dongle in, I can connect to the network (shows on the menu and my router). But since the firmware was not updated in the dongle, no joy on VLC Media.

Is there an alternate means of updating the dongle firmware?

If it is helpful, menu Wifi shows version 0.0 (while connected). Is it possible the update routine is expecting something else?

An alternate USB based dongle update program would be useful here (NOT the ST serial kludge).

I wonder if it's worth a try to delete the update file, then try the
update again.

You are using the latest Sentinel, right?

1563. Re: [BCD536HP] Two headphone jacks?

Yahoo group: BCD536HP
Date: 2015-02-06 20:44:16 UTC
From: N1CHU
Topic: 1556 Message: 1563

You want to install a scanner in a vehicle and feed both an inside (the cab) external speaker and an outside the cab external (weatherproof) speaker. No problem...

First, plug into the scanner's external speaker jack a set of leads that go to a switch. Connect both speakers to that switch. You can set it up as a three position switch whereby you feed one speaker or the other speaker or both at the same time. But I wouldn't do that for practical reasons... If both are on at the same time, you may not know the outside speaker is on when sitting in the cab. That could be disturbing to those outside at an accident scene. And also cause feedback if a rescue unit or cop is trying to use their radios due to feedback. In general, it's best to set up external speakers where only one works at a time.

Just match the speakers to what the radio wants to see. If it's a 4 ohm speaker jack you should use that size. If it's an 8 ohm output use that size speaker.

Bill

On Feb 6, 2015, at 2:40 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Sorry if this is in the manual but looked and didn't see it...

I have a friend who wants to set up the 536 in a tow truck. They want to have a speaker in the cab, and be able to rebroadcast the audio through a external speaker (essentially a siren unit). Are there two headphone outputs on the 536 - one for a speaker and one that can go to a siren unit? Or how is this commonly done in these types of installs?

Thanks :)

Updated fine here. I wonder if maybe there were some glitches during DL that caused these issues.

Sent from my Verizon Wireless 4G LTE DROID

1565. Re: [BCD536HP] Firmware Release for Remote Wifi / App support

Yahoo group: BCD536HP
Date: 2015-02-06 20:50:44 UTC
From: Gerald L. Dubzak, Jr. - W2GLD
Topic: 1533 Message: 1565

I tried that twice, even tried using Windows 7 instead of Windows 8, same issue, both scanners, both WiFi dongles… Constant Error Code: 0004

UPMAN, those 20 or so samples engineering tried, were they all late model serial numbers or units that we shipped back in January 2014, as were ours?

Just wondering if something changed in production, because I seen several users that just bought BCD536HP's within the past three months, and all their updates went through just fine. Possible issue here?

1566. Re: [BCD536HP] Firmware Release for Remote Wifi / App support

Yahoo group: BCD536HP
Date: 2015-02-06 21:02:23 UTC
From: dsugarma@...
Topic: 1533 Message: 1566

My 536 just bricked when applying the new firmware.

Everything went fine until I unplugged the USB. It then said applying firmware and not to turn off the power. Several seconds later unit powered off by itself. I left it like that for about 10 minutes thinking it would re-power & re-boot. It never did. Now unit will not even power on, completely dead.

On telephone hold for customer service now. This sucks.

I've done firmware updates dozens of times on all types of devices & never had this happen before.

Most siren controllers connect to the user's radio by bridging across
the speaker wires on an external speaker or connecting to a fixed level
output on the radio. Otherwise use a DPDT toggle switch to select
between the inside and an outside speaker.

From: w9ql@...
Topic: 1533 Message: 1572

After seeing mixed results, I decided to try the firmware update. The firmware loaded properly and then I immediately received the 0004 error. Turning the scanner off and unplugging the dongle and then re-connecting at the startup error message had mixed results. Sometimes I would go back to scanning and see that the dongle had connected to my wi-fi network and sometimes the scanner just stayed locked up. When I could connect, I observed the following:

1. I could ping the scanner with no problem. I had full signal strength on my wi-fi signal.
2. I could run VLC player for about 1 minute. After that, the player showed an error that it could no longer connect to the stream. I could still ping the scanner with no problem.
3. I could not get the RH536 program to connect to the scanner at all, I received a "scanner not found" message either entering the IP address manually or doing a search. The program would then lock up and the only way to close it down was to terminate it with task manager.
4. If I turned the scanner off, when it was turned back on with the dongle connected, I received the 0004 error message again.

So, it appears that Uniden has more work to do. I have deleted the firmware file off the scanner as UpMan suggested to get back to where I was. Disappointing, in light of the long delay in receiving functionality that was supposed to be present at the time of purchase. However, in the spirit of cooperation and desire to solve this issue, if I can provide any useful data to Uniden engineering, I am happy to reload the firmware and try anything they suggest.

Scanner S/N: 375Z38002110

Most everything went fine but the dongle does not prompt to update no matter what I do. What version should the Wi-Fi dongle be? I have 7.28.

Thanks,

Russell

<http://info.uniden.com/UnidenMan4/BCD536HPFirmwareUpdate>
http://info.uniden.com/UnidenMan4/BCD536HPFirmwareUpdate

Oh, what is it? It is Phase 1 of our app-supporting firmware release. It includes a new version of Sentinel that will apply updates to both your scanner and Wi-Fi dongle, allowing them to be accessed over an internet link. It also includes a PC based remote-control utility and instructions for installing VLC to get the audio stream from the scanner.

Current plan is to incrementally improve the remote control support in 5 phases over the next few months. This gets us to being able to operate the scanner in scanning mode over a IP link. Future updates will add support for additional modes.

Just an update to my dilemma.

Just wanted to let everyone know that it was a bad mico SD card. It was the original 4GB that came with the unit. I tried reading it & formatting on a different device. No luck. The card was dead.

Ran out a bought a new one. Works great.

I don't know if the firmware update killed the original card or it was just a coincidence that it decided to fail at that particular time. Anyway, I'm back up & running & glad I don't need to send the unit for repair.

Just an FYI in case someone else runs into this problem. The unit wouldn't display the "Sd Card Access Error" message until it was unplugged from power for about an hour. Then I had to remove the card to get that message. Also had to insert & re-insert the card several times before I could get that message with the card inserted. Thinking there was a capacitor or the clock battery still providing slight power to the unit that was causing this. The new card powered up right away with no problem.

1576. Re: [BCD536HP] Firmware Release for Remote Wifi / App support

Yahoo group: BCD536HP
Date: 2015-02-07 00:03:42 UTC
From: Gary Saffer
Topic: 1533 Message: 1576

Firmware updates applied first time without problems. WiFi set up didn't work the first time, but did the second time. No idea what I might have screwed up the first time.

VLC installed, but wouldn't work the first time I tried it. Then I realized I had the wrong IP address. Fixed that and it still didn't work.

I reinitiated the WiFi set up on the scanner and now it works fine. Again, no idead what I might have screwed up.

One thing I noticed is that I have to manually reconnect to the network every time I turn the scanner on. Minor pain, either a button on the front panel or automatic reconnection would be really nice.

I'm still working on getting the RH536 application to work. I suspect it's a set up issue, but haven't got it yet. I'm going to install the VLC and control apps on my laptop and see if I can get them to work from across the room.

Pretty encouraging so far.

That's my take on it too. I was referring to the component's life span. Caps win that one.

On Feb 3, 2015, at 2:17 PM, John johnstark@earthlink.net [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

.It depends on the type of cap and its capacity vs load on how long it takes to discharge it.
However caps have a much longer lifespan than batteries which break down faster due to the heat they generate

"Jim Keay reach147@... [BCD536HP]" <BCD536HP@yahoogroups.com> wrote:

Batteries are better, capacitors will discharge eventually and not recharge until power restored to circuit.

Its been awhile for me, but there is a formula for how long a cap will hold a charge in a circuit when un-powered.

Some caps can hold a large charge for long enough to zap you good after power is removed.

Joe M.,

"There isn't much difference between a capacitor and a rechargeable
battery from an operational standpoint."

Thanks Joe. I was wondering if anyone remembers examples of radios that used the capacitor instead of a battery to retain memory when not plugged in. Another point I wonder about is capacitors vs batteries... Which last longer? I can remember replacing batteries but never caps...

Bill

Rechargeable batteries will also "discharge eventually and not
recharge until power restored to circuit". Even the unit batteries will
do this. LSDs, too, only not quite as fast. But, eventually they too
will drain.

The duration of any charged device is:
Duration = Capacity - Drain.
That's very over-simplified, but accurate.

There is no fixed time since the drain is dependent on the circuit it is
powering, and how much power that circuit requires.

Downloaded Sentinel 1.03.1 - no problems. Updated firmware - no problems on the scanner, had the dongle issue where I had to unplug it, start scanner then plug it in. All firmware updated.
Connected to Wi-Fi (entering the password is a pain). Got an IP address.
Ran VLC, entered network stream address. No good, no sound. Corrected misspelling in network stream address. Audio on PC! Sounds better there than the units speaker.

Ran the RH-536HP_mkII program. No luck. Cannot detect scanner. "Unhandled exception - Only one usage of each socket (protocol/network address/port) is normally permitted".

Topic: 1533 Message: 1583

Spoke too soon. After turning off the scanner, when turning it back on I get a Error 0004 "Error updating wifi firmware". I turn off the scanner, unplug the dongle, turn on the scanner get a "Waiting for wifi connection" message, plug in the dongle, error message goes away but wifi dongle firmware is not updated. Every time I turn on the scanner I get the same Error 0004 message. If I leave the wifi dongle unplugged, eventually the "waiting for wifi connection" message goes away and scanner operates as normal.

So - still need to update wifi firmware, then I should be all set.

I have the 5.11 light for life flashglight which uses a 'ultra capacitor'. It's great because it charges in like 90 seconds. However, it doesn't last as long (ie turn on flashlight, leave it on) as a regular 'battery' flashlight. It also self discharges REAL quick. I think in a week or less off the charger it will be dead. They say leave it on the charger 24/7.

If other devices used ultra capacitors, would I prefer that? Yep. If I had say a handheld scanner, it wouldn't last as long but could charge in 90 seconds? Bring it on! :)

Speaker Audio? Line Level? The two are vastly different.

As was stated, some sirens want to see the former, others the latter.

Speaker audio will vary with the volume control. Line level will not.

The siren manual should tell you what input it wants.

I was wondering if the update was the same version
some people were updating to in the past couple weeks...

Maybe the error is caused by the dongle containing the same FW.

1588. Re: [BCD536HP] Two headphone jacks?

Yahoo group: BCD536HP
Date: 2015-02-07 03:20:35 UTC
From: Evan Platt
Topic: 1556 Message: 1588

Ah Gotcha. I believe speaker audio. There's a volume control on the sirens that I've seen. I believe the siren will likely be a galls, although I can't find the exact model. Most seem to be similiar in the documentation:

http://www.galls.com/DOCUMENTS/SK124_Galls_Full_Feature_Siren_ST160.pdf

So it says "Connect the Blue wires to the terminals of speaker or to the output jack of radio"

So output jack to me says headphone, not a line out, no?

Says to me to use the external speaker line (which sorts
mandates an external speaker unless you want to mod the jack).

So, both earphone and line level would be out.

Ok, thanks for the input.. they asked me since I knew the scanner, but hopefully the person doing the install has done it before and knows what to do. Between the two of us, ... have a fire extinguisher handy :)

1591. Re: Firmware Release for Remote Wifi / App support

Yahoo group: BCD536HP
Date: 2015-02-07 12:37:53 UTC
From: mparrott@...
Topic: 1533 Message: 1591

How can one tell the (firmware) version of the WiFi Dongle?

In Menu > Wi-Fi Setup > Show Wi-Fi Information I see an AP (My network name), an IP address, a MAC address and a Version number which reads 0.00.

Is that it or is it some where else?

1592. Question about error when setting day

Yahoo group: BCD536HP
Date: 2015-02-07 21:17:03 UTC
From: Bob McNally
Topic: 1592 Message: 1592

I've had my BCD536HP for a little while now with no issues. Today when I turned it on and it again asked to set the clockI started to do that. I set Daylight Saving to "off", Set time zone to the proper zone, Set year to "2015" (default was 2130), Set month to "02" (default was 13), attempted to set day to "07" (default was 45) and all I get is "out of range" "Press any key" and that takes me back to the set day menu. The system will not take any value I enter.

For some background, I did this when I first turned on the system this morning and it failed at the set day screen. I then launched sentinel and ran a firmware update to update the system to the latest firmware (firmware update was successful) and tried again. It again failed at the same spot (set day). I cleared the system and reloaded everything again with no luck.

Has anyone else seen this issue? Does anyone have any ideas? Thanks / Bob

I'm guessing this has something to do with the Siren App, yet to be released? A list of the various functions we will be able to (should expect to) change remotely? And the app would list these abilities?

Bill

If Uniden wants to post files they have their own site(s). I believe the files were posted by someone other than Uniden on this users group, and are Uniden files, available to all, as it is "open source", intended by Uniden. And someone wanted them to be handy to all. Kind of a one-stop-shopping location. I can not vouch for their accuracy but have no reason to doubt their correctness at the time they were posted. I also have no need for them but did post a question (at least I thought I had) asking if they were a list of various commands the Siren App will use. I believe there may be third party interest in incorporating them In part, at least, by Butel or anyone else who might wish to produce programming. Just a guess mind you.

Scott,

I was somewhat perplexed, as you seem to be) at the instructions
that were out there. Perhaps someone can clear this up for me:

First of all, I plugged in the dongle and found that I WAS at
Version 5.01. Fine. And I understood that, this being the case, I am
to proceed no further. Then, the instructions go on and on about
firmware updates!!??? So my questions...is there anything further I
need to do?

Wanting to be careful, I did the Sentinel update and left it as
that, but I think Uniden should have provided some kind of decision
chart, instead of the convoluted instructions that I found.

Whoever posted them needs to let everyone know what the files are.
There are enough problems with the 536HP without public updates. With
all the problems owners are having getting the Uniden firmware update to
work, I was just surprised to see someone post additional private
firmware updates.

I am still waiting for a response to Upman on my post last week. After updating Sentinel (it works fine) and the firmware, my 536HP says there is no WiFi connected and there is an ! at the top of the display. When the scanner powers up, it looks for wifi and then loads my favorites and scans normally.

RAR files are an archive compressed file like a Zip file do a goggle on winrar - that is the program that is used to generate the file or go to www.rarlab.com

Agreed... But that's another story. I volunteered a possible explanation to your original question and so far haven't seen anyone challenge it so I must be in agreement with others more knowledgable on the subject.

I believe the files were posted by someone other than Uniden on this users group, and are Uniden files, available to all, as it is "open source", intended by Uniden. And someone wanted them to be handy to all. Kind of a one-stop-shopping location. I can not vouch for their accuracy but have no reason to doubt their correctness at the time they were posted. I also have no need for them but did post a question (at least I thought I had) asking if they were a list of various commands the Siren App will use. I believe there may be third party interest in incorporating them In part, at least, by Butel or anyone else who might wish to produce programming. Just a guess mind you.

From: Rick WA6NHC
Topic: 1533 Message: 1612

I have the updated software and firmware, but the dongle won't update. I simply unplugged the dongle so I could scan. When plugged in (after the timeout), the dongle connects to my wifi, but nothing is accessible from it. I didn't do a port scan this time, but the last attempt showed no open ports. Ping responds properly and the router sees it.

If you would like to use my scanner and dongle as a beta site, I volunteer. It is tantalizingly close to working.

I tried the dongle update via the USB - serial software (dongle plugged into a USB port), making several changes to the program access (permissions, run as, environment), no joy. I tried a couple different computers (one fast, one average ability). I tried both versions of firmware that are publicly available.

All the logs show exactly the same communication (which I didn't bother to try to decode) so it isn't a communication issue, but rather I suspect that the dongle is simply saying "I can't do that". There are four lines, each log, then the program hangs.

I went as far as I could with the tools available, without brute force. I can't tell you the actual firmware version that is in place, the wifi data screen shows 0.0.

Regards,
Rick wa6nhc

Uniden is aware of the issue and is working on it. Apparently, it only affects this who were using the 5.01 version of firmware previously. (at least that's what I gather from reading the various posts)

Thanks, but I know what RAR files are. What I don't know however, is what these RAR files are exactly (no explanation given) and who the person is who uploaded them. Being that Uniden's firmware update has caused the problem for owners that it has, I think it is a little irresponsible to post updates this way. In otherwords, if me and many others are having problems with The 536HP's manufacturer updates, how can we trust an outsider's updates??

I could not agree more. There is no downside to waiting for a big green light from Paul Opitz. Sure, I would love to have Siren working now but, after waiting a year, a few more weeks until we are assured that the release is official and the it really works properly and safely means nothing. Some our group may enjoy riding the "bleeding edge" but not me!

Upman;
I have completed the firmware update with no error messages popping up
on my monitor. However, after unplugging the USB cable from the 536HP
and the scanner installing the firmware, I have an exclamation point now
next to the wi-fi indicator on the scanner. I never got an error for the
wi-fi but, I did turn the scanner off and unplug the dongle. While the
scanner was re-starting (display showed "Updating wifi Firmware" and
Waiting for wifi connection"). Still no error msg and scanner shows the
wifi symbol with ! in the display. I even went into the wifi settings
to see if I could turn the wifi on but it says "no wifi connection"

Like others, I have a dongle that will not update – ERROR CODE 0004.
For what it's worth, I bought the 536 within a month of it being introduced and available. There was one dongle update early on, that was applied.

MAC HW ID on the Dongle: FC4DD4E2A2E7

I was able to disconnect the dongle at the error message, and restart the scanner.
I left the dongle unplugged until the scanner returned to normal operations. I then went into
WIFI config and the dongle was able to see my local WIFI networks and get a DHCP IP address assignment.

The version on the WiFi information screen shows 0.0 however after the failed upgrade.

It's been a long while, and I'll wait a while longer. Hope the details will help, and can provide additional details as necessary UPMAN.

Tried this process on our two and still no luck; the updater does nothing to the WiFi adapter dongle. The application just sits there and goes unresponsive if you try to do anything else on the PC. I let it sit for over 30 minutes, and still no response for either dongle reporting 0.00

1621. Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-12 14:33:14 UTC
From: Uniden UPMan
Topic: 1621 Message: 1621

I updated the instructions this morning and changed the updater to version 0.00.05 (from 0.00.03). This version will work with all dongles, including those that have been locked up by attempting to upgrade using the scanner.

If your module is at v4.x, you can skip to the bottom of that page and click the link.
If your module is showing 5.x or 0.00, you must use the steps shown by default when you open that page before proceeding to the link.

1622. 9 Pin Connect

Yahoo group: BCD536HP
Date: 2015-02-12 17:05:56 UTC
From: nysff@...
Topic: 1622 Message: 1622

I bought a 9 Pin plug that is a USB Connect into my Desktop and plug up my 536, set the GPS Serial Port speed to 115200 bps. And I get nothing on the computer side using Setinal, ProScan & Butel. So what am I doing wrong? The front plug works just fine as well as the Wifi dongle.

Thanks in advance for your help.

Shawn

Strike 3…

Tried again this morning, both adapters, Windows 7 and Windows 8.1 with the newer 0.00.05 updater and same results. The updater application just sits there and does nothing. None responsive after about 30 minutes. Seems like Uniden really has a handle on this issue after only a year of development time…

Both WiFi dongles still stuck at 0.00 and so far, every solution Uniden offers is a bust! Just give me a refund already… After strike 3, I'm done! What a shame and waste, there was nothing wrong with the BCD396XT/996XT models, why couldn't you just have added Phase II support that an existing platform. What a joke!

YAY!!! About a .75-1 second delay, QUITE acceptable.

Thank you!! Now, to confirm, if I want to hear it from OUTside my house LAN, I have the router port forward port 554 to the scanner?

This will be awesome, thank you.

GPS is for a GPS Dongle. It sounds like you're trying to connect to the PC?
You need a USB cable. Not sure what you mean by a 9 pin plug (Serial)?

From: bob.peloquin@...
Topic: 1622 Message: 1626

What exactly are you trying to do? 9-pin implies RS-232 serial interface. In order to use Sentinel to update the scanner it must use USB (do not confuse the word 'serial' in Universal Serial Bus [USB] with RS-232 serial interface).

The mini-USB connector on the 536 is the only way to talk to the scanner from your computer. It uses a standard USB-A to mini-USB cable.

For serial interface like the GPS or for certain other serial data uses, use the 9-pin serial connector on the back. For uploading/downloading to/from the computer, use the 5-pin mini-USB connector into a USB-A flat connector on your computer.

1627. RE: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-12 18:51:54 UTC
From: Dewey
Topic: 1621 Message: 1627

Ok Paul,

I didn’t want to update earlier because of all of the issues going on, so when I saw this message, I decided to take the dive. I followed the new instructions to the letter, but was surprised when I continually got the “0004” error myself. Looking deeper, I discovered that my dongle wasn’t updating, but erroring out instead. Based on the error message that I was getting, I figured it was a UAC (User Access Control) issue on the 64-bit Windows 7. So I totally disabled UAC, had no problem doing the update, then turned UAC back on and haven’t had any problems since. Bottom line, I think in my case, UAC was stopping something the update was doing in wanting to write to the Program Files(x86) directory (typical UAC issue). If it doesn’t get stripped, a copy of the error message that led me in this direction is attached. Info only, all is well…

Subject: [BCD536HP] Wi-Fi-Support Update

I updated the instructions this morning and changed the updater to version 0.00.05 (from 0.00.03). This version will work with all dongles, including those that have been locked up by attempting to upgrade using the scanner.

If your module is at v4.x, you can skip to the bottom of that page and click the link.
If your module is showing 5.x or 0.00, you must use the steps shown by default when you open that page before proceeding to the link.

1629. Re: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-12 17:39:35 UTC
From: Gerald L. Dubzak, Jr. - W2GLD
Topic: 1621 Message: 1629

For the record, I gave this one last attempt using a Windows 7 (x86) PC and was able to recovery the WiFi dongles at this time. Both are now running latest firmware now and are working with the scanner. Not sure why this didn't work in Windows 7 (x64) or Windows 8.1 (x64), but whatever, it's fixed now. My suggestion for Uniden is partner with a better third-party vendor for WiFi equipment; this company that provided these is a joke.

Regards,

Jerry, W2GLD

1631. RE: [BCD536HP] 9 Pin Connect

Yahoo group: BCD536HP
Date: 2015-02-12 21:32:21 UTC
From: KE4JD
Topic: 1622 Message: 1631

On the 996s you have to use a null modem to attach a computer to the 9 pin port. That may also be the case for the 536. Sentinel seems to interact with internal file system directly so I don’t know that it would work from the back.

To: BCD536HP@yahoogroups.com
Subject: [BCD536HP] 9 Pin Connect

I bought a 9 Pin plug that is a USB Connect into my Desktop and plug up my 536, set the GPS Serial Port speed to 115200 bps. And I get nothing on the computer side using Setinal, ProScan & Butel. So what am I doing wrong? The front plug works just fine as well as the Wifi dongle.

Thanks in advance for your help.

Shawn

1633. iOS App for remote listening

Yahoo group: BCD536HP
Date: 2015-02-12 22:00:26 UTC
From: HappyMoosePhoto@...
Topic: 1633 Message: 1633

I wish to extend the scanner 'server' to outside my LAN so I can listen to it from anywhere. I've already poked a hole in the firewall to route to the scanner, but need something other than the laptop app.

So, until the Siren app appears:

What are folks using for iOS devices to listen to the scanner remotely now?

Which apps for Android?

Please include a brief description of set up.

Thanks,
Rick WA6NHC

I have a problem that no one has addressed so I thought I'd pass it on. When I installed the firmware update last week, The scanner stopped recognizing the Dongle. It shows the Wi-Fi error icon on the scanner display. I finally talked to Uniden Tech. Support a few minutes ago. I was told by Sam (nice Guy btw) that this was one problem they had not seen before. He advised he would call me back after checking with others. I still can receive fine, luckily. We both wondered if I installed the firmware from Feb. of 2014 if that would help? I can not find that older firmware and he is going to try to find it and send me a link.

According to Sam, I am the first person to report this problem. And by
no prior mention of it here or at the RR forums, I tend to believe him.
I got no error messages nor has my scanner quit receiving. My scanner
just doesn't "see" the Dongle any longer.

1640. RE: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-13 00:17:23 UTC
From: w9ql@...
Topic: 1621 Message: 1640

Dewey,

Thank you for the UAC suggestion. The update failed on my Win 7 64 laptop on the first try. After disabling the UAC, the firmware update went fine and I am able to stream audio over my network. Also, the RH-536HP control software seems to work fine. For others trying this, remember to reboot your computer after disabling UAC so that it will take effect, before attempting the firmware update.

Dave

From: terry bill
Topic: 1622 Message: 1641

I'm using a serial connection to the back of my 536 almost exclusively, using ARCPRO (Butel) for desktop Virtual Control (remote head) and recording. You CAN use the rear serial port to write to and read from the SD card using ARCPRO but you must use Sentinel and the front port for firmware updates (AFAIK).

My first failure with the serial connection (after repeated failures with the front connection going into Mass Storage mode whenever it felt like it) was one you've already solved by setting the GPS port speed on the scanner to 115200. Once I did that all worked rock solid and has for months. I routinely edit my favorites, talk groups, unit ID's etc in ARCPRO and write them to the 536 as well as record 24/7 on the PC. (Everything is working so well that I think I'll wait for the kerfluffle to settle down before I try the latest and greatest)

The only other suggestions I can offer is to confirm the com-port is correctly selected (if using ARCPRO) and make sure you have the correct serial cable. There are null modem and straight through serial cables. Unfortunately I can't tell you which one I have as its the same one I've been using since my 785 days.

I'm presuming your "9 Pin plug that is a USB" is a serial (not USB) connection and you're attempting to use the rear port on the 536. If you can get what you want from the front cable use that. I got tired of coming in to see the 536 sitting in uncommanded (at least by me) Mass Storage mode.

Good luck

I bought a 9 Pin plug that is a USB
Connect into my Desktop and plug up my 536, set the GPS
Serial Port speed to 115200 bps. And I get nothing on the
computer side using Setinal, ProScan & Butel. So what am
I doing wrong? The front plug works just fine as well as the
Wifi dongle.
Thanks in
advance for your
help.Shawn

Don't forget the HomePatrol.com forum area for BCD536HP
It's being talked about on that Uniden America company forum.

No luck.

I followed the instructions and see the firmware updated from 0.00 to v5.01. Ran the firmware update. I see that it gets a little further in that I see the status bar show up before it shows the 0004 error. After removing the firmware file and checking the dongle version it is back to 0.00. I've uninstalled the update software and re-installed several times but no luck. Shortly after running the firmware I get the 0004 error. UAC was already off so that isn't an issue. Windows 7 Home Premium. Any other ideas?

From: N1CHU
Topic: 1622 Message: 1645

TerryBill,

I'm trying to substitute an IPad mini for the BCD536HP's smaller display in my truck. It's simply an attempt to have a much bigger display that I can read. But so far, I haven't been able to. The ARCPRO has the virtual scanner ability but Butel is no help when I asked if there was a way of loading the ARCPRO program onto the iPad. (I could use a laptop instead but wanted a smaller install footprint using the smaller iPad mini). So my question is can you think of a way I can do this? Bluetooth? Or permanent cable connection between the iPad and scanner? I doubt the siren app will be any good if it needs to be pumped to the Internet without a hotspot on my cell phone... There is no interest or need to control the scanner using the iPad, just want it to display a larger version (or same info) of what the scanner display window shows. Your post below has raised my hopes that it can be done with some sort of cable, from one of the ports on the scanner to that mini data port Apple uses on its iPads.

Bill

"Should've got the Surface Pro 2 or 3"

Duh! Not a lot of help Michael. If I had one of those I wouldn't be posting my question, now would I?

All kidding aside, I'd like to explore possibilities using what I currently have. But thank you for the suggestion on the Surface Pros... It may just be the only way to do what I want if I strike out with the iPad.

Follow the instructions and update the dongle (only, direct into pc) to the latest version.

It requires a newer update program, which is also in the instructions.

Try a windows tablet.

I bought a WinBook TW700 7 inch tablet to use for some ham radio applications and was really impressed with the performance in relation to the price. I bought mine for $59.00

This runs windows 8.1, touch screen, has a USB port, and micro sd card port and mini hdmi port.

Might work for your application since it is windows natively.

Thx Upman!

New instructions worked like a charm -- I actually checked the dongle upgrade by plugging in BEFORE running the firmware update just to see that version moved from 0.00 to 7.28.

Everything is happy, and VLC works just great.

I followed the new instructions exactly, including the VCP re-installation. For what it was worth, my setup was Win-7 under Parallels on a mac-mini. The VCP assignment was to COM7, and I checked the port settings and they showed as 4800 baud in case that matters.

I made sure to run the VCP update, THEN plug in the dongle after that installation was completely finished -- there was an extra pop-up that had to be responded to before it was actually done.

Then I reinstalled the firmware updater and ran that selecting COM7. It did as described, sat
for many seconds appearing to do nothing, and then it confirmed the update was completed.

My dongle was 0.00 version before the attempt, and 7.28 once the process was completed.

As with most of these PC things, YMMV - your mileage may vary.

I like your optimism (or is it desperation ;-) I barely know about serial cables so asking me anything about those new-fangled i-devices goes light years beyond my knowledge base.

I'm really showing my ignorance here (which seldom stops me) but a network doesn't require the internet. If you had a router in your truck might the Uniden remote head function work on your mini? Long shot but desperate times...

I haven't seen it work at all, my STMicroelectronics device showing up on virtual comport five when plugged into a USB port and the updater only seeing comports 3 & 4, so I'm just throwing stuff on the wall to see if anything sticks. Good luck

TerryBill,
I'm trying to
substitute an IPad mini for the BCD536HP's smaller
display in my truck. It's simply an attempt to have a
much bigger display that I can read. But so far, I
haven't been able to. The ARCPRO has the virtual scanner
ability but Butel is no help when I asked if there was a way
of loading the ARCPRO program onto the iPad. (I could use a
laptop instead but wanted a smaller install footprint using
the smaller iPad mini). So my question is can you think of a
way I can do this? Bluetooth? Or permanent cable connection
between the iPad and scanner? I doubt the siren app will be
any good if it needs to be pumped to the Internet without a
hotspot on my cell phone... There is no interest or need to
control the scanner using the iPad, just want it to display
a larger version (or same info) of what the scanner display
window shows. Your post below has raised my hopes that it
can be done with some sort of cable, from one of the ports
on the scanner to that mini data port Apple uses on its
iPads.

It worked fine for me using Win 8.1 on an Asus touch screen computer.
Both the RH536 and VLC programs ran without a hitch. Pretty cool to be
sitting across the room from my scanner and listen to it and see the
display.

I'd might actually use a fully developed remote program from somebody if
it worked wirelessly.

1664. Scanner stopped working..

Yahoo group: BCD536HP
Date: 2015-02-15 02:59:22 UTC
From: Howie Seiden
Topic: 1664 Message: 1664

Ok I am on vacation so I arrived and reset the address to the zip code I am visiting and listening away for about 30 minutes. I then hear 2 beeps which sounds like a close call hit but I was wrong. It says SD card access error. So I pop the card out and pop back in. No luck. Keep getting the same error and scanner will not do anything else. I do not have my cables with me so I can't try hooking up to Sentinel

Fyi I have not not anything with the WiFi or download yet so I know that is not the problem.
Any ideas appreciated.

Hate to say it but the fix is:
Try formatting the card and reload it.
Or
Get a new card.
As cheap as they are I have 2 spares for each radio plus the active card. The spares always go with me and have latest updates.

Also, you can use an SD Card reader to format the card, use "CLEAR USER DATA" in Sentinel, and write the dB to it without the cables.

After you've done this, install the new card in the scanner and it will work.

That said, there is nothing special about the cable - it's a stock USB to Mini USB cable. Sentinel is available to DL on the Uniden website.

Thanks Joe and John for the quick reply. Learned my lesson that you can travel with a big enough scanner then you should have room for the cable. Wonder why the disk crapped out as all I did was stop the radio on a conversation. Will try to see if I can do either of those tasks during the week or will bring it back like a brick and fix it when I get home. Thanks again Howie Sent via the Samsung GALAXY S®4, an AT&T 4G LTE smartphone

This is frustrating!
- I followed the new instructions to the letter and immediately was able to stream to my desktop with no issues. Great!
- Turned off the scanner then later turned it back on and immediately got the 0004 error.- Turned off the scanner, unplugged the dongle and turned the scanner back on.- Scanner started with dark screen and message "Updating wifi firmware. Waiting for wifi connection"- After about 30 seconds the scanner will start normally- Plug the dongle back in while the scanner is running- Restart VLC and it links properly.- Turn off scanner- Turn scanner back on and the whole cycle repeats
This is frustrating!

Thanks - that was the issue. Now everything works - as long as I keep the scanner within 5 feet of the PC. That, of course, is not very satisfactory so more work remains. Here's hoping that the Android Siren app works correctly when it comes out.

  Delete the WiFi BIN file in the firmware folder.

1672. OT: VLC Repeater help?

Yahoo group: BCD536HP
Date: 2015-02-15 20:42:18 UTC
From: Rick WA6NHC
Topic: 1672 Message: 1672

Hello all,

While I am VERY pleased that the wifi dongle is now functioning properly, I note that it can only handle one connection at a time. I'm not surprised by this, the processing power was never intended for multiple streams and it could quickly get choked.

At some point down the road, I expect that the Siren app will also let me watch what channel is in use during active audio. It may also allow multiple connections via a (presumably Windows) program.

In the meantime, I have a barely used linux (Debian Wheezy) box that would make the perfect stream repeater (reflector in current parlance). It lives within the same network as the scanner.

I'd like to use vlc-nox (the linux version withOUT a GUI interface) to act as a simple repeater to take the scanner stream and echo it into the Internet so that I (and others) can hear the scanner from anywhere with more than one connection allowed (hear the '536 from home and hear the '436 locally wherever I am). The machine that vlc-nox would reside on has plenty of reserve CPU ability, already serves as my web server and has a fast (60MB/s) connection.

Where I'm getting stuck is the command line to take the rtsp://<ip-address>/au:scanner.au and send it out. My testing has been from the Windows version of VLC, within my LAN, with almost zero success.

The audio should be output in a format that is compatible with ANY simple web browser so that any smartphone or tablet can play the audio. (I'm presuming HTTP feed, .mp3 audio.) Active channel display is not important.

There don't appear to be any VLC support groups and the help documentation presumes familiarity. I'm fluent in 'geek speak', but it isn't making sense.

Is there someone familiar with vlc-nox that can walk me through it?

Thanks,
Rick wa6nhc

5 feet? Wow. Mine connects to a router that is about 20 feet away.

When you open VLC, select MEDIA, then CONNECT NETWORK STREAM and it will have the box to enter rtsp://<ip-address>/au:scanner.au

(if that is what you were asking)

From: Rick WA6NHC
Topic: 1672 Message: 1675

Almost.

I want VLC to accept the stream from the scanner and then re-stream it
in a manner that will allow multiple connects (because the scanner
can't). Then I can listen from various locations, at the same time.

Then I want to do that from my linux box... without the graphic
interface. So I can hear my scanner from anywhere on the Internet.

1676. RE: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-15 22:40:40 UTC
From: Ed (K9EDK)
Topic: 1621 Message: 1676

OK. Dummy alert here. I just spent most of my day after Valentine's Day with my a$$ firmly planted in the chair in front of my computer. I was able to update the firmware and Sentinel just fine. I installed the VLC software, and that's as far as I can get. I'm running win7. When the scanner receives a signal, I get an error message on VLC

Connection failed:

VLC could not connect to "192.168.1.1:554".

Your input can't be opened:

VLC is unable to open the MRL 'rtsp://192.168.1.1/au:scanner.au'. Check the log for details.

So, VLC seems to know the scanner is there. I've tried every combination of the URL that I can think of. Add this, remove that. I'm thinking I'm missing something really stupid and simple and I'm overthinking it. Can someone point me in the right direction. I'm not even going to go down the "remote control" road until I get over this hurdle.

Where do I find the log and what will it tell me? Should I even bother looking at it?

Someone please tell me I'm doing something obviously wrong.

Ed

Run VLC Media Player

After starting VLC, select the scanner's audio by selecting MEDIA --> Network Stream and then entering rtsp://192.168.1.1/au:scanner.au (replace the IP address with the actual IP address of your scanner, which you can find by MENU --> Wi-Fi Setup --> Show Wi-Fi Information after connecting your scanner to a network or initiating Access Point Mode). Note that the scanner and PC must be on the same network.

You should begin hearing the scanner's audio through your PC speaker.

So basically you want to do what has been done for decades stream scanner audio using shoutcast, icecast or other stream software. What are you waiting for? Uniden?

Are you using ACCESS POINT mode?

If not, the address 192.168.1.1 is likely not your scanner's
address. Look in the WiFi settings for the correct IP.

That is the same response to any connection not made, it isn't proof of life for the scanner.

VLC also remembers the faulty connections too (probably left in the registry, I haven't looked). So make sure your connection attempt is to the proper address.

In your example:

'rtsp://192.168.1.1/au:scanner.au' would seem to point to a router, not the scanner unless you're using an ad-hoc connection.

Check (in the scanner wifi menu or on your router) what the actual wifi address is for the scanner. By using 'cmd.exe' to open a command window, you can verify that the address is valid with: 'ping <ip-address>' and watching the replies. There should be 100% throughput, zero lost.

NOTES: In the iOS version of VLC, you _must_ append the port as in: <ip-address*:554*> in the connect string.
In the Windows flavor, even if you tell it to 'store in the config file' any changes to the effects (chopping low frequency audio to notch out the PL tones), never gets written so every restart, you have to set it, again. :(VLC is a work in progress.

The log isn't accessible from the software (in any version). It's also not in the program folder. MIA

Hello,

You entered the internal IP address of the gateway or router. Enter the IP address of the scanner "192.168.1.X" where X is your scanner. The menu system will have the address under Wifi Info.

Dave L.

OK. Dummy alert here… I just spent most of my day after Valentine’s Day with my a$$ firmly planted in the chair in front of my computer. I was able to update the firmware and Sentinel just fine. I installed the VLC software, and that’s as far as I can get. I’m running win7. When the scanner receives a signal, I get an error message on VLC

Connection failed:
VLC could not connect to "192.168.1.1:554".
Your input can't be opened:
VLC is unable to open the MRL 'rtsp://192.168.1.1/au:scanner.au'. Check the log for details.

So, VLC seems to know the scanner is there. I’ve tried every combination of the URL that I can think of. Add this, remove that… I’m thinking I’m missing something really stupid and simple and I’m overthinking it. Can someone point me in the right direction. I’m not even going to go down the “remote control” road until I get over this hurdle.

Where do I find the log and what will it tell me? Should I even bother looking at it?

Someone please tell me I’m doing something obviously wrong.

Ed

Run VLC Media Player
After starting VLC, select the scanner's audio by selecting MEDIA --> Network Stream and then entering rtsp://192.168.1.1/au:scanner.au (replace the IP address with the actual IP address of your scanner, which you can find by MENU --> Wi-Fi Setup --> Show Wi-Fi Information after connecting your scanner to a network or initiating Access Point Mode).
Note that the scanner and PC must be on the same network.
You should begin hearing the scanner's audio through your PC speaker.

When I first installed the firmware update and connected to my router, that's the IP address the scanner gave. I looked on the router and found the correct address. Why that happened, I don't know and it hasn't happened since.

It seems that several of you are telling me the same thing, and the fact that you're all on the same page is very encouraging. In WiFi settings on my scanner, the IP address is, in fact, 192.168.1.1. I had already checked the router settings, and the IP address of the router is also 192.168.1.1, and I think that's part of what has me so befuddled.

These radio is so much smarter than I am. I've successfully updated the dongle and scanner firmware but actually doing something with it is a bit of a challenge. If I try to use Access Point it wants an SSID (whatever that should be) and gives the same IP address as the router 192.168.1.1 and if I want to use Infrastructure it logically wants the password for the Access Point but as soon as I enter a 6 or 4 I'm navigating instead of entering. Even then how does one enter alphas on the number pad? Am I missing a page of the instructions?

I updated the instructions this morning and changed the
updater to version
0.00.05 (from 0.00.03). This version will work with all
dongles, including those
that have been locked up by attempting to upgrade using the
scanner.

If
your module is at v4.x, you can skip to the bottom of that
page and click the
link.
If your module is showing 5.x or 0.00,
you must use the steps shown by
default when you open that page before proceeding to the
link.

The SSID is the name for the scanner.

The IP may be the same as your router, but there will be no conflict
since it is a different network.

You use the scroll button to select the value and 4/6 to move left/right.

Maybe you are missing some of the manual, but this is the same as the
method used to enter any alphanumeric data on the scanner.

1695. Re: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-18 06:15:35 UTC
From: MCH
Topic: 1621 Message: 1695

SSID stands for "service set identifier," and it is used to uniquely identify any given wireless network. In the case of the scanner acting as an ACCESS POINT, the scanner IS the network. You set it so the device you are connecting to the scanner can easily identify the scanner. You might set it for BCD536HP, for example.

You would be correct talking about infrastructure mode where the SSID is set in the access point you are connecting the scanner to.

But, when the scanner is asking you to set it, it's the same as setting it in the access point of a LAN.

Well every vendor who makes routers sets a default SSID for their wireless lan,,I guess Uniden has a better idea :-)

Subject: Re: [BCD536HP] Wi-Fi-Support Update

SSID stands for "service set identifier," and it is used to uniquely identify any given wireless network. In the case of the scanner acting as an ACCESS POINT, the scanner IS the network. You set it so the device you are connecting to the scanner can easily identify the scanner. You might set it for BCD536HP, for example.

You would be correct talking about infrastructure mode where the SSID is set in the access point you are connecting the scanner to.

But, when the scanner is asking you to set it, it's the same as setting it in the access point of a LAN.

Yes, but why would you need to for a radio? Am I going to MAC filter the clients connecting also? Why not simply tie it to the infrastructure and leverage the security investment in the router and firewall? Not to mention getting an actual GUI and web browser interface configuration as opposed to a keypad entry.

I don't know what all plans Uniden has, but it makes sense to want to
give the user the option to set the SSID to something easily recognizable.

As for connecting to a LAN, how many people have a LAN installed in
their car for a remote head?

I've read a lot of complaints, but complaining about the ability to set
a SSID is one of the least significant I've ever heard. If you don't
want to set it, don't set it.

I see what your saying and I personally don't use my radio in my car, I have it in my house.

I wasn't complaining, but making an observation that if you are setting a device to allow easy client wireless access, then you now have security considerations in addition to simply changing the SSID.

Actually, I would want to shut the broadcast off for the SSID in this case.
Anything on wireless without some sort of protection usually gets hacked, to what extent that is a problem I guess we'll find out.

From: Uniden UPMan
Topic: 1621 Message: 1701

ACCESS POINT MODE: You must set the name of the network the scanner will create (SSID). There is a default setting that starts BCD536HP_...
INFRASTRUCTURE MODE: You select the network from the list of discovered networks, then input the security code (if used).
This is nearly identical in flow to using my smart phone:
HOT SPOT (i.e. Access Point): Name the hot spot (i.e. provide the SSID) or accept the default.CONNECT TO A NETWORK (i.e. infrastructure mode): Select the network form the list of discovered networks, then input the security code (if used).
UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

D'oh! This is what happens when I do all of the data entry from the PC and never auger through putting it in from the scanner. Just the answer I needed and an educational followup discussion between you & Mr. Keay, both offering valid observations. Thanks for sharing.

The SSID is the name for the scanner.

The IP may be the same as your router, but there will be no conflict since it is a different network.

You use the scroll button to select the value and 4/6 to move left/right.

Maybe you are missing some of the manual, but this is the same as the method used to enter any alphanumeric data on the scanner.

Paul,

My scanner is on my network, because I can ping it from my laptop (192.168.1.140) and it responds to the ping, but I cannot seem to get VLC to see it. Any ideas?

Yes, but why would you need to for a radio? Am I going to MAC filter the clients connecting also? Why not simply tie it to the infrastructure and leverage the security investment in the router and firewall? Not to mention getting an actual GUI and web browser interface configuration as opposed to a keypad entry.

Give it up on using anything "I" (I-pad, I-phone, I-pod etc.) with software designed for the PC platform. Not gonna happen seamlessly, if at all.

If you want to run Butel for remote display/control then you'll need a Windoze box of some kind to do it - period. Gommert (from Butel) does Windows only software and we've already seen what a hassle it is to get a Mac to run Windows versions of Sentinel.

I might suggest you try a Windows tablet computer with a USB port (or dongle) like the Lenovo Miix-2 8" or similar. There are few Windows tablets with full-sized USB ports but many can run USB host mode with a dongle of some sort and then connect to the front port on the scanner (or maybe the back with a USB-serial adapter) for remote display.

Be careful of having it visible to the driver (likely what you want).
Because such a device can display videos, it may be illegal in your
state (it is in CA). In short, laptops, smartphones and similar may not
be visible to the driver.

Even if the state doesn't have that specific law, it is safe to assume
that a distracted driving law would be used. Caution is advised.

Yes, I did run the BC_WF1_Updater_V0.00.05 updater. I used another machine this morning (Windows XP for the firmware and Windows 7 Professional for Sentinel) and the firmware on the dongle is now updated to 7.28. Thanks for the help.

I'm sorry. I didn't realize that using multiple colors was creating a problem!
Should I just stick to plain text like this?

For pictures of my mobile station, go to this link:
https://driiive.com/Radio-Man/1985PlymouthColt/

1711. WiFi Question

Yahoo group: BCD536HP
Date: 2015-02-16 21:35:59 UTC
From: Paul Wolsko
Topic: 1711 Message: 1711

A little help would be appreciated.

I did the recommended updates, and they worked just fine. WiFi info shows a MAC address, level 7.28 and my Scanner's IP is 192.168.1.140. I know that my network sees the scanner. because I can Ping the scanner from my laptop - Win7. Software can see the scanner.

If I go to VLC and attempt to open a Media Stream using 192.168.1.140, I get an error message. Ideas?

If you're trying it on an iOS device, try:

rtsp://192.168.1.140:554/au:scanner.au

The iOS version is 'different' than the PC version.

The :554 tells it specifically which port to use for connect.

Thanks for the heads up on video displays. As a licensed ham I have researched this topic and have determined mobile amateur radio installations (which include transceivers, receivers, computers and any related programming), provided the gear is NOT being used to circumvent the law, is allowed, as there are allowances in most locals that provide for FCC license exemptions. Of course, as you say, depending upon where you are, there may be certain local or state exceptions to my understanding which can land you in the deep stuff.

But it never hurts to review this legal stuff every so often...

Bill

Michael,

OK. Just tried that. Worked perfectly!!!!

Thanks much!

Paul

As you found out, that's not a complete address.

Joe M.

1724. Re: [BCD536HP] Wi-Fi-Support Update

Yahoo group: BCD536HP
Date: 2015-02-19 22:41:02 UTC
From: Rick Bates, WA6NHC
Topic: 1621 Message: 1724

This is likely redundant to the list, but ALL the directions need to be followed. It's easy to miss, but try (using VLC): rtsp://192.168.1.140/au:scanner.au (That ENTIRE address.)

If you're trying the iOS version of VLC, you must add the port value in the address:

rtsp://192.168.1.140:554/au:scanner.au in order for it to work.

Rick, WA6NHC

iPad = small keypad = typos = sorry ;-)

Untrue. You must append that with /au:scanner.au for it to work.

Not sure I track your point about a MAC and Sentinel. I have been using Sentinel and the other various updaters from Uniden, along with other numerous programs for programming my Yaesu, Kenwood, and some commercial radios under Parallels without a problem.

The hardest part about the process is making sure you set Parallels to ask you whether to connect USB devices to the Windoze VM or to the MAC. Other than that easy-peezy.

Used PC's for over 25 years, and MAC products for last 10 of that 25
and manage to get done whatever needs doing between both platforms.

73's,

Dave, KB3YCK

I had experienced issues with Sentinel using Parallels under Yosemite. When asked whether to connect USB devices to the Windoze VM or to the MAC, which had you selected?

Thanks

Glenn

Really? Just Google RS232 DB-9 pinout.

It is a host device, so it will be the same as a PC.

Always to the VM since that is where sentinel is running.

Parallels allows you to set the VM as the default to avoid the prompt too.

I have it ask just so I know since I have my ftdx3000 connected usb to the mac, and don't want to have that changed.

1732. Winbook TW700 Tablet and BCD536H

Yahoo group: BCD536HP
Date: 2015-02-21 21:59:08 UTC
From: n1chu@...
Topic: 1732 Message: 1732

I am trying to get the Tablet to run the virtual scanner option included in BUTEL's ARC536PRO. The tablet has a regular USB port and should accept the challenge. But I can't get the Device Manager to work as it does on my laptop... Also running Windows 8.1. The device manager shows the USB port shows the BCD536HP Serial Port under Other Devices, not Ports (com & LPT). Additionally, under Ports (COM & LPT) in Device Manager on my laptop which does work with the Butel program, the port is called Uniden Serial Port (COM7).

I thought it might be a driver problem I am having, confused as to what driver I should be using. I thought the Prolific 1.5 serial port driver was what I need but I guess there is another driver called Uniden Serial Port?

Any help on this would be appreciated...

Bill

You need to download uniden windows serial drivers. (If you have to ask where the download is please remove sentinel and sell scanner on eBay.)
Save the driver to the downloads folder. Don't open windows serial driver folder right click on it and extract all to the downloads folder.
Plug in scanner to PC click on serial port on scanner go to Device manager find scanner click on it.
Click update driver. Click browse my computer for a driver software. Click let me pick from a list of device drivers on my computer. Click computer. Click on have disk. Change A:\ to C drive click on browse. You will probably be in documents here change it to downloads and click till the driver comes up then click ok and click next to install. Then in Device manager it will say uniden serial port com and the port number that the port you will use in ARC536PRO.

Thanks.

Still something else going on. I am running latest versions of Sentinel, Parallels, OSX and Windows (with all patches). Trying to access the 436 in Sentinel via the usb cable still corrupts the sd card. I continue to be successful using a Usb card reader though.

Maybe your success and my failure have to do with the USB hardware in my Mac Mini vs your Mac.

I had done a couple troubleshooting sessions with Parallels support and they seemed to be focusing on that.

I had a similar issue. Seemed to be related to the fact that Windoze kept telling me it did not recognize the card. I downloaded sdformatter and did a FULL format of the card, not the quick one.

After doing that, I used sentinel to clear user data and reload to the card. After having done that, the card is not properly recognized every time I plug in the usb cable. Not sure if this is because of the reformat, or the later bersion of Sentinel. There was a comment about card recognition being addressed as a bug fix in the latest version.

73's,

Dave, KB3YCK

How did you format the card? (what file system?)

Sarcasm has no place here. Come to think about it, it doesn't serve anyone well anywhere. Making comments like you did with me when you told me if I can't find USB drivers on Uniden's website I should uninstall Sentinel and sell my scanner on eBay was not called for and certainly should not be tolerated... And you wonder why hardly no one bothered to reply to your comments...
Then to top it off you fire back "no name", admonishing me because I didn't sign my name! That's the best you could do? What a piece of work.

And again John, thank you.

I have a question after reading all these posts these past several weeks. I purposely have held off upgrading firmware, sentinel, database or anything until things stabilize and work properly, is this a safe assumption? What would I gain by doing any of these upgrades right now as my 536 is working fine for now? I live in CT and nothing really has changed here with respect to frequency changes. Also, I assume siren is still not working properly as well?? Thanks, Gil

While I have not spent very much time with the x36 series scanners, let's take a look at this from a different viewpoint.

In a trunking system such as P25 or Motorola Type 1 or Type 2 trunking there are control or data channels and voice channels. The control channel is where the "housekeeping" of the radio system takes place. The data stream broadcast on the control channel is a continuous transmission that includes the system ID, the active talkgroups and the channels that those talkgroups are assigned to.

Only one control channel will be in use at a site, but there will typically be at least 2 channels assigned as possible control channels at any site to provide backup if one fails. The remainder of the channels at a site are designated as voice channels used to communicate with the subscriber radios. Some systems have the control channel fixed to a specific frequency while others allow the control channel assignment to rotate within a list of frequencies. A channel that is used for a control channel can also be assigned as a voice channel when is is not in use as a control channel.

In order to receive a valid talkgroup the subscriber radio (or a scanner) has to know where in the system the transmission for the desired talkgroup is taking place. The control channel data provides that information and the radio or scanner then knows where to tune. Remember that the advantage of a trunking system is that you can pack a large group of users into a small group of frequencies.

So let's take a look at a simplified version of events that take place when a radio configured to operate on a P25 trunk system is turned on.

The radio looks at it's programed information for a list of possible control channels. It will then step through this list checking to see if it can detect activity followed by trying to decode valid control channel data. After starting to decode data it then checks the decoded system ID. If the received ID matches the programmed system ID then the radio knows it is listening to the correct system and will start checking for the selected talkgroup ID. If it hears the talkgroup ID it will also hear a frequency assignment and will leave the control channel and switch to the frequency assigned by the system central controller. In order to deal with the possibility that a radio might arrive on the control channel after the initial assignment the information continues to be broadcast on the control channel as long as the talkgroup is in use. When the talkgroup is no longer in use the radio returns to the control channel. The radio will always remain on the control channel when it is not listening to a transmission directed to the selected talkgroup.

Now let's look at the scanner.

When scanning a SINGLE P25 system AND NOTHING ELSE the scanner looks for the control channel from the programmed frequency list. It will remain on the control channel once it has started to decode P25 data. It does not try to match the system ID because it does not know the system ID. It's only job is to look for matching talkgroup ID's in the decoded data. It will switch to the frequency assigned to a matched talkgroup ID when it decodes the talkgroup ID and the frequency data from the control channel. When the talkgroup is not in use the scanner will sit on the control channel. Monitoring the control channel data at this point is pretty much a background task. The 796D would show the ID's of active talkgroups when sitting on the control channel in ID SCAN and not receiving a valid talkgroup.

The difference comes when the scanner is used to monitor more than one site in a trunked system or a trunked system and some conventional channels. The time spent listening to the control channel will be just long enough to look for the entire data message that indicates the active talkgroups. The scanner will then leave the control channel and move onto the other programmed channels looking for activity. So it will be constantly be jumping from one frequency to another and will only stop on activity or pause on the P25 data. If it detects that a talkgroup is in use it will go to the assigned frequency for the talkgroup.

The DAT indicator is only going to be seen when the scanner is searching, holding on a channel, or if the scanner is programmed to the control channel in a non-trunked mode. During this time the scanner will be muted. The DAT indicator was simply a way to tell the user that there is something being received but it is not voice. I have also seen DAT displayed briefly on a 796D after the radio switches back to the control channel from a voice channel. The 796D would also show LNK during the switch from a voice channel. This would be during the time that certain handshaking was taking place between the radio and the system. The other indicator that might be seen is ENC meaning encryption. Here again the indicator is simply telling you that something is being received but the scanner will be muted.

>I only have the control channel in the radio. I'm receiving fine just<
> missing the DAT. Only get DAT on searching for frequencies<

If the scanner is hearing the talkgroups that you have programmed then it is working just fine. Digging a bit further, page 30 of the manual for the x36 series scanners explains when DAT and other in call indicators will be seen on the display.

You should look at the Radio Reference page for the system in question and enter any frequency that is listed as a control or alternate as long as the system is a P25 type. These are shown in red or blue in the site frequency list.

Older Motorola Type 1 (Privacy Plus) and Type 2 (Smartnet) systems needed the full list of frequencies for each site. MOST but not all P25

systems broadcast all the information required for a Uniden scanner to follow the system once it has started monitoring the control channel data.

For a quick test I set up two systems in a 396XT that I had available. System 1 was a conventional channel with a P25 trunk control channel from a nearby system and a second unrelated frequency.

System 2 was a P25 standard trunk system with the same single control channel and second unrelated frequency with ID SEARCH selected.

System 1 shows the P25 frequency, a full scale RF indication, stayed muted and the DAT indicator was present. Forcing the radio off to the second channel by pressing scan immediately brought the radio back to the P25 channel as expected.

System 2 shows the P25 control channel frequency when scanning and receiving the control channel. When the scanner is in Display Mode 1 and receiving a talkgroup the display changes to show the voice channel frequency and also shows the additional indicators P25(receiving on voice channel)/LNK(end of call)/DAT(re-syncing with the control channel data). It does not show DAT when only receiving the control channel in scan mode. If the scanner is in Display Mode 2 the control channel frequency is shown when the scanner is scanning but when the radio switches to a voice channel only the talkgroup ID is shown. If the scanner is in Display Mode 3 the control channel frequency will be displayed when scanning but it will be replaced with the Unit ID when receiving on a voice channel.

Gil, I too live in Ct and haven't updated the data in weeks, because, as you say, nothing really has changed. (Avon FD did a frequency swap between their fire ground and Fire police frequencies. The RR database has been updated so the next time you update it will already be there.)

As for the dongle updated recently, it's preliminary. The Siren app is not out there yet so there is no rush on the dongle. When Uniden is ready, with the full, or close to full offering, it will be released with full documentation. I did the dongle update and it did work but there are others that experienced issues. That sent Uniden back to the drawing board. They are concerned as to why not all had favorable results and are working the problem. Nothing need be done at this stage. So I'm waiting too.

No matter John. He was just looking for a rebuttal, any rebuttal. Reminds me of "Oh yea? Well, so's your Mother!", or some such thing we did as kids. It didn't work well as a child but now that I'm older it's a great comeback when you can't think of something clever to say... makes the other party step back wondering if you are loosing all your marbles... Then start twitching... Could be dangerous and they leave you alone! It doesn't work on my wife anymore, she's on to me!

I refuse to sign my name on the grounds that I'm doing just what I stated there was no room for here, namely sarcasm. I apologize to the group and will attempt to better behave in the future. Nuf said.

Gil, I too live in Ct and haven't updated the data in weeks, because, as you say, nothing really has changed. (Avon FD did a frequency swap between their fire ground and Fire police frequencies. The RR database has been updated so the next time you update it will already be there.)
As for the dongle updated recently, it's preliminary. The Siren app is not out there yet so there is no rush on the dongle. When Uniden is ready, with the full, or close to full offering, it will be released with full documentation. I did the dongle update and it did work but there are others that experienced issues. That sent Uniden back to the drawing board. They are concerned as to why not all had favorable results and are working the problem. Nothing need be done at this stage. So I'm waiting too.

From: Rick WA6NHC
Topic: 1736 Message: 1759

Bill & Gil,

I've been using it since the second release (I had one of the dongles that didn't want to update). It's been fine, nice to have other listening options. There is no reason to NOT upgrade at this time, using the second iteration.

Be aware of two thing:
1) that the VLC software that is suggested is 'a work in progress' and that the various flavors (Win v iOS for example) have different command lines. (iOS requires the addition of the port value :554 after the IP address). I haven't spent a lot of time using my Nook HD+ as it stumbles over it's own apps (severely slow and retarded, crippled OS).

2) that the scanner can only access ONE remote user at a time (annoying but not unexpected since it involves increasing CPU use). If you attempt adding more, it may stop all efforts requiring the original 'user' to restart the connection. If you want to allow more than one listener, you must create a relay (repeater) that has the bandwidth and can handle the load.

I look forward to increasing ability of the firmware and software but for now I'm happy. I can run the scanner in my RV and hear it in the tow vehicle without moving a thing (using an iOS device or my Nook) saving time and space. I can also hear it from another room when I'm home. More features would be nice, but it's functional now.

The control app released (designed for in house use only originally) also shows great promise. A few added features (adding/deleting favorites on the scan mode; passing audio; other OS) and it will be plenty for most.

In other words, accept that it is all a work in progress and you'll be fine. You can safely update now or wait, but I'd expect that there will never be a 'final' edition for quite some time (by then we'll be using different scanners anyway).

Regards,
Rick wa6nhc

From: w9ql@...
Topic: 1761 Message: 1761

Since I installed the last firmware upgrade on my 536, I notice that whenever I have to re-enter the time (after the internal battery discharges), the scanner powers up with all favorites lists disabled i.e. "nothing to scan". Entering the favorite list number 00 then E/yes does not reactivate the list. I have to go into the menu and turn the list(s) on from there. Then, all of the System lists under each favorite have to be turned back on, they are also all disabled. Once they are back on, I can them turn them on and off with the appropriate number and E/yes keys and everything runs fine. Anyone else experiencing this? For the record, the battery seems to stay charged for about 24 -36 hours after the scanner has been constantly on for 24 hours. The scanner will be a year old in April.

1762. RTC issue / clock issue / time issue / time reset

Yahoo group: BCD536HP
Date: 2015-03-01 12:30:23 UTC
From: MCH
Topic: 1762 Message: 1762

Re-posted from UPMan:

Shortly after we started shipping the BCD436HP and BCD536HP, we began to receive complaints regarding the clock needing to be reset after every power cycle. Some of these reports were related to needing to charge the internal real-time clock (RTC) battery for a while in order for time to be maintained. However, I also noticed some people reporting the RTC battery not keeping the time even after following the recommended procedure.

After investigating internally, we were at first unable to explain why this was happening. All units we checked worked as designed (and this is a common design as the HomePatrol-1 and HomePatrol-2, for which we've received virtually no complaints). I was able to exchange known good units with some customers who had known bad units and we confirmed that these bad units really were bad. However, the cause was elusive.

Recently, however, Engineering has been able to determine that the failure is caused by an intermittent production issue, and we are preparing a service campaign for affected units. We believe fewer than 5% of total units are experiencing this issue.

To test if your scanner is subject to this repair campaign, follow these steps:

1) Operate the scanner continuously for 2 days (turn it down at night, if need be). For the BCD436HP, you can operate continuously by connecting a USB Power Source to the scanner and selecting "Serial Mode" at the prompt.

2) Turn off the scanner overnight.

3) Turn on the scanner.

If you were prompted to enter the time in Step 3, then your scanner is affected.

Our general procedure will be to send you a shipping label, expedite repair on your scanner when it is received, then ship your scanner back to you. Based on similar campaigns, we do not expect your scanner to be out of your hands for more than about 2 weeks during normal repair facility operation.

We are building a site for you to enter your personal and scanner information, and also waiting to receive a stock of repair parts, which should arrive in about 2 weeks.

Once the web site is operational, I will post the link to this thread.
We might start processing repairs sooner than 2 weeks (we have some
parts on hand), but our target to be fully ready is about March 11.

Joe M.

Dave,
Try this, once you have everything the way you want it, turn the scanner off and then cycle back on.

This in theory will write the way you have it configured to the memory card and restart in the same manner.

I'd also do a download when it is scanning just the way you want it as well.

1764. Feature want

Yahoo group: BCD536HP
Date: 2015-03-04 01:44:34 UTC
From: Rick WA6NHC
Topic: 1764 Message: 1764

I'm using a GPS to reprogram the scanner according to where I am.
However, I don't always remember which data format is used on which GPS.

In one of the next firmware updates, could the screen marker for GPS signal do a slow blink when it is receiving valid location data? That would make it consistent with my Kenwood radios at least and easy for me to remember, off is none, steady is bad, blinking means it's working.

Upman?

Thanks,
Rick wa6nhc

The HomePatrol 1 and 2 have different colored indicators (red, yellow, green) for the status of the GPS. Dunno if something similar is available on the 536 (like different shapes etc.) but that would do it I suppose.

Hi Bob,

As you likely already know, the BCDx36 scanners have an LED that displays color (optionally) on receipt of certain groups or frequencies. On the LCD display(s) there is a "GPS" that appears.

What I'm suggesting is that on receipt of a valid GPS data stream, that GPS icon does a slow blink to signify validity (less obnoxious to a driver than a flashing LED). This would be good for anyone using a GPS, including those without a display (as in a GPS 'puck' receiver). Since the scanners can read either decimal or deg/min/sec, a blinking icon would show the user has selected the proper mode. There isn't any way to confirm quickly otherwise.

Yes, one can attach the GPS to a serial port and read the data stream, that isn't the point. :o) One small change and the scanner could tell you it's content with the data stream. No blinky, no good, try the other GPS mode; no blinky either mode, either the GPS has no lock (no stream) or it's busted.

It's a great feature, one of the reasons I opted for them since I travel. In the long run it'll save DAYS of creating favorite lists as I travel across country.

By the way, since you included your call; I'm using the second data port on the Kenwood TM-D710a (works on G too) from the GPS, so it's feeding the APRS stream AND the scanner with data. I have enough GPS units in the vehicles already, I didn't want to add another (NAV, OnStar, APRS).

Well if the issue is that you may have multiple types of data streams available for the scanner to use, you have to select the correct format (NMEA0183) and match the baud rate before connecting it. This is standard procedure and should be covered by the user's manual (but it isn't). I added a small GPS puck receiver with its own power source to run my HomePatrol-1. It could also be used to run an APRS radio if I wanted but I'd have to split and possibly duplicate the serial data stream and make sure both radios were set to the same speed and data requirements. Since the Uniden scanners must have only NMEA0183 data fromat, you must pre-set the GPS to output that stream format and match the baud rates. In my opinion, there's no need for a status display change in this case. It either works or it doesn't and the cause can only be that you got the setting wrong upon setup or that the GPS has stopped sending valid NMEA0183 data.

The only time I see a change in my data indicator on the HomePatrol-1 is when I drive into a parking garage or something and it stops sending valid data due to loss of signal. When signal is restored, it goes green again and that's all I need to see. On the 436 or 536 all you should ever need to see is whether the GPS symbol is on or off in my opinion. If it's off, you have a problem. You don't know what the problem is, but you know there's a problem.

As a ham you should have other means of isolating the problem and fixing it. You don't need your scanner to be used as a diagnostic tool in my opinion.

1768. Re: [BCD536HP] Re: Feature want

Yahoo group: BCD536HP
Date: 2015-03-04 17:20:42 UTC
From: Rick WA6NHC
Topic: 1764 Message: 1768

Hi Bob,

The stream is NMEA and the baud rate of 4800 seems to be the standard, that part is simple. It is up to the user to ensure which format the GPS produces, not always a simple thing for some (they need plug and play). The question remains as to which of the two data stream formats available are being sent by the GPS; decimal or deg/min/sec. One can presume decimal is more common, but it's not a guarantee.

There is currently no way on the BCDx36HP to know if the data stream is being interpreted correctly, until you drive beyond the 'range' setting and notice hearing 'new' things (and that isn't a guarantee). The icon is the perfect way to know things are the way you want (expect) them to be.

I don't need it for diagnostics however if there is an icon status change, the average user would be reassured that the data stream is being interpreted correctly. If the code writers choose, leaving the icon OFF without a valid stream would be just as effective. But since our eyes notice motion more quickly than something static, a blinking LCD icon (on valid data) would be my choice. I would not want the LED to shine as that is a distraction to the driver, the LCD is informative and subtle.

Yes, you should be able to safely split your data output on the puck to feed scanner and APRS, since it only sends in the blind without 'listening' for a response or handshaking. I'd suggest using only two wires, ground and data. The only caveat is to not load the output too far, which shouldn't be an issue for feeding two radios; feeding 5 would be an issue. ;o)

As to the manual, while it covers things technical, it could use a lot of HOW-TO (and why) added. A rewrite would be a HUGE endeavor. It is currently daunting to many. I'm fluent in Geek and there are portions that I had to read several times (and reference other sections) before the light came on. It's a complex radio because the systems we listen to are complex. The manual is the place to make it simple (operating features too). C-, improvement needed.

73,
Rick wa6nhc

The 'why' is not the place of an operator's or owner's manual.

That's the place of education.

My car's owner's manual doesn't tell me how to drive - it simply tells
me how to operate that particular car.

Just as the manual doesn't tell you WHAT to listen to, but should rather tell you HOW to listen to what you wish to hear. The 'why' the user needs a particular setting is the education. The manual is the perfect logical place to give both how and why to the user.

The NMEA format does not output anything but a stream of decimal digits and
some letters and commas. Anything that converts them from that to another
format is optional. No GPS-enabled scanner I know of requires more than
the minimum GPRMC sentence consisting of:

$GPRMC,123519,A,4807.038,N,01131.000,E,022.4,084.4,230394,003.1,W*6A

Where:
RMC Recommended Minimum sentence C
123519 Fix taken at 12:35:19 UTC
A Status A=active or V=Void.
4807.038,N Latitude 48 deg 07.038' N
01131.000,E Longitude 11 deg 31.000' E
022.4 Speed over the ground in knots
084.4 Track angle in degrees True
230394 Date - 23rd of March 1994
003.1,W Magnetic Variation
*6A The checksum data, always begins with *

While we are talking of added features, I would like to see the LED on both the 536 and 436 to stay on the entire transmission like both the GRE's and Radio Shack models do also a combination of colors plus more flash rates (slow, meadow, fast and steady) unless this is a patent on GRE/Radio Shack (Whistler) scanners.

As has been mentioned before, it is widely
believed that this would be a patent violation.

Joe,

Seriously? Ok... What part of his suggestion might violate a patents right... Since there is already (on the 536) a lighted indication, that flashes, at various speeds, and different colors, what's left? The duration?

So what, did GRE/Whistler/Radio Shack invent the power source that pulses on an off? And then attach an LED to it? It sounds like trying to get patents for rain water!

My meaning is nothing would surprise me about the legal eagles squeezing every last bit of worth out of a product but patent infringement for this? A bit over the top. I would love to learn more about this. Was it an agreement settled upon over an unrelated issue? (ex; Ok, I will agree to this if you agree to not do something in the future...).

Yes - seriously.

Yes - the duration.

No agreements involved AFAIK.

Someone else has the patent that (roughly) says they patent an activity LED that lights or flashes for the duration of the transmission. No far fetched at all. In fact, there are a slew of patents that apply to the 536 alone - including Close Call. If you think Signal Stalker is the same, it's not. It operates just differently enough that they don't infringe. Specifically, Signal Stalker takes the 'Close Call' hit, then initiates a search of 1 MHz of spectrum based on that hit. Then they hope that is the only transmission within range during that search.

On a related note, Uniden is removing the requirement that you press a key to display the frequency on a Close Call hit, as the patent held by Optoelectronics that the frequency is automatically shown expired.

As for attorneys, they live to file infringement suits. Potentially big money.

"Well, there ya have it... Democracy at its finest", or something like that. Clint Eastwood used that line in the Grenada War movie he starred in. I think of it every time I confuse common sense with the law.

And duration... As a power conservationist, especially where portable equipment is involved, the lights, even the LEDs, drain unnecessary for the most part. But then I'm a practical guy with simple needs. I don't want or care to draw attention to my radios (a great trick when you have 4 antennas mounted on your truck). Unnecessary lighting just draws more attention to them, and yourself. If I wanted that kind of attention I would have gotten a circus wagon! Well, I did, come to think of it. A Harley Davidson Ultra Classic Electra Glide! But that's different (he says as he turns red).

I've got a few handheld amateur radios that utilize LEDs which light when a signal is received-and stay lit, or pulsate for the duration of the transmission. I'm betting "that's different" also.

I'm thinking somebody will be getting around to sharing with anyone who is looking for it. It shouldn't be too hard to modify or reprogram the radio to gain what the guy wants. After all, the radio is already doing it each time it shows a "capture" in the display

The patent might specify multi-color LEDs or LEDs that can be different colors for different channels. Not sure, but you may raise an interesting point.

For that matter, remember the 70s Regency scanner that had different colored lenses for the different channels? In a sense, that might be the same thing, too.

But, I'm quite certain Uniden had their legal eagles look into the matter. With all the people asking for the change, I'm sure there is a reason they aren't adding it.

Interesting. I posted a simple COR light modification for the
Radio Shack PRO-2004 earlier than March 1989.

<http://www.qsl.net/n5sdd/mods/mods/tandy/pro2004.txt>

I built a flashing COR light into the front panel of
a PRO-2022, but nothing as sophisticated as using multiple colors
to signify different frequencies or channels.

The latter is a neat innovation.

I think you meant Robyn scanners. I finally tossed my Robyns couple of
years ago during a massive scanner decluttering project.

Maybe it was Robyn. You're probably right.

Still, it all comes down to:
"Is this feature worth the cost of a potential legal battle?"

1786. HELP Memory not taking?

Yahoo group: BCD536HP
Date: 2015-03-07 15:16:36 UTC
From: wd6fox@...
Topic: 1786 Message: 1786

Good Morning All!!

Just got BCD-536.. Actually ordered from BestBuy.com I updated the firmware out of the box, and have the latest sentinel software.

So on a few of my favorite lists when I write them to the scanner, the scanner says nothing found! Here is an example:

Startup Key #2 (System Name= LADOT)
Then I assigned the proper group keys, save it to the computer, but when it transfers to the scanner, its like nothing happened?

Bad memory in the scanner? CAN ANYONE HELP?

Thanks,
Sean

It likely 'took'.

Common issues are:

Did you enable the Service Types you set for the channels you programmed?

Since you assigned a Start-Up key, did you enable that key when you
powered on the scanner? (and my suggestion is that unless you're sure
you need it, disable the Start-Up key).

Did you enable any Quick Keys that you programmed?

Did you set Download to ON in your profile?

Did you set Monitor to ON in your profile?

We will just start with those, which 99.9% of the time will resolve the
issue.

Does is say "nothing found" or "nothing to scan"?

I have much the same thing happen a couple of times. In the end I just built a new favorite with the same frequencies and the same talk groups and it worked. To my eye the original favorite and the replacement appear to be identical but one works and the other says Nothing To Scan. Go figure.

1792. SD Card Issue

Yahoo group: BCD536HP
Date: 2015-03-08 14:55:04 UTC
From: Jim Stein
Topic: 1792 Message: 1792

I am trying to install a new 16GB SD card. I think I have followed the manual instructions carefully:- downloaded the special SD Formatter program- formatted the card using the utility- inserted the SD card into the 536HP and got the expected message "Clear User Data"- opened Sentinel and ran Clear User Data - Sentinel found the new SD card as expected and ran Clear User Data- Clear User Data failed with a message "Database is corrupt. Operation canceled. Incorrect function."- Started all from scratch and repeated, still get the same failure - Returned to the original SD card and the 536 runs fine and and the database is fine
Any suggestions?

1793. Re: [BCD536HP] SD Card Issue

Two things.

1. Make sure the card is formatted as FAT or FAT32. I think you did this or Sentinel would not recognize the card.

2. Copy your existing card to the PC. Then, copy that to the new card.

After you cleared the user data add the firmware with firmware update will ask you what scanner you have I do this with an adapter and not in the scanner and then it should work.

Joe,

Sorry to hit on the same subject but just yesterday I also experienced the same thing. I put together a favorites list using ARC536PRO, loaded it and got the nothing to scan message. What's funny about this is I've never manually set any quick keys and have the radio scanning away. I guess I thought the ARC program was taking care of business transparently. It caused me to ignore the other guys posts (and yours) experiencing this problem. But now I see I do fall into this trap. And I don't see what you posted earlier on my cell phone when I go to the group and I've tried assigning quick keys with no luck. Can you repost?

Thanks, Bill

Sure.

Common issues are:

Did you enable the Service Types you set for the channels you programmed?

Since you assigned a Start-Up key, did you enable that key when you
powered on the scanner? (and my suggestion is that unless you're sure
you need it, disable the Start-Up key).

Did you enable any Quick Keys that you programmed?

Did you set Download to ON in your profile?

Did you set Monitor to ON in your profile?

We will just start with those, which 99.9% of the time will resolve the
issue.

Favorites lists with Location Control enabled MUST have locations and ranges set for systems in that favorites list. For user-created Favorites Lists it's important to realize that you must set a Service Type, Location and Range for each and every entry at the system level and optionally at the department level.

Location-based scanners rely heavily on this data so select or deselect the systems to scan. Assuming that if these fields are left blank, the scanner will scan them by default is a major mistake. If you select to use location control for a favorites list then you're going to have to have valid locations and ranges for everything in that list. If you leave the service type blank, none of the data will be seen as valid to scan by the HP-series scanners.

The sheer volume of data that had to be created by Uniden for the initial release of the HP-series scanners is just staggering - and it was just a very basic framework at the time. In many areas the RR database has been vastly improved and I've rejected user submissions which don't have locations and ranges assigned to them if the user who submitted them refused to provide that data upon contacting them. It's become a standard (for me) of all data submissions to the RR database. Unfortunately, many scanner users who would provide great frequency information appear to be lacking in the map and/or GPS skills and knowledge necessary to give good data for their "private" frequencies. They don't own locations-based scanners and don't care about the location or service types.

We, as owners of these location-based scanners, have more reasons to learn about and become experts at using geographic location and range to enhance our scanning experience. It's all part and parcel of Uniden HP-series scanner ownership in my opinion.

So, if you don't use or fully understand location control or service types, you'd better start learning...

Thanks Bob,

Well said. As with most, I suppose I went after the frequencies I was interested in and applied them to the scanner. Like you say, the previous scanners (BCD396/996XT) didn't look at location based. And as I was in a rush to program the radio, I neglected to set the required parameters. One thing I still question is what Joe calls my profile... I'm not challenging the process, just don't know what is meant by profile. I guess it's semantics, my understanding profile by another description or term. But all's well that ends well. Now that I understand location control. In fact, I'm in the process of assigning unique long/lat data to each town in my county instead of using RR data. RR uses the same long/lat for each town in a given county in Ct. I'm trying to get the radio to recognize or drop each town as I drive through them, setting the range to zero or 1 mile. When I finish that then it's off to learn how to better define the town boundaries using the rectangular instead of the circular. Once completed I will submit to RR.

In Sentinel, if you click EDIT then PROFILE, you will bring up a page with a lot of tabs. All those settings are what make up your profile. It's basically everything in Sentinel except for the FL data. Some FL settings are part of the profile, but none of the FL data itself.

hello,
just my two cents.
the profile is "you, the user's" configuration file, with all bells n whistle that you want the scanner to preform..
speaking of service types, in your profile, open service type, right click, choose "set all services". this takes any future service type problems out of the equation..the setting app[ies to all FL in your "profile".

Favorites lists with Location Control enabled MUST have locations and ranges set for systems in that favorites list. For user-created Favorites Lists it's important to realize that you must set a Service Type, Location and Range for each and every entry at the system level and optionally at the department level.

Location-based scanners rely heavily on this data so select or deselect the systems to scan. Assuming that if these fields are left blank, the scanner will scan them by default is a major mistake. If you select to use location control for a favorites list then you're going to have to have valid locations and ranges for everything in that list. If you leave the service type blank, none of the data will be seen as valid to scan by the HP-series

scanners.

The sheer volume of data that had to be created by Uniden for the initial release of the HP-series scanners is just staggering - and it was just a very basic framework at the time. In many areas the RR database has been vastly improved and I've rejected user submissions which don't have locations and ranges assigned to them if the user who submitted them refused to provide that data upon contacting them. It's become a standard (for me) of all data submissions to the RR database. Unfortunately, many scanner users who would provide great frequency information appear to be lacking in the map and/or GPS skills and knowledge necessary to give good data for their "private" frequencies. They don't own locations-based scanners and don't care about the location or service types.

We, as owners of these location-based scanners, have more reasons to learn about and become experts at using geographic location and range to enhance our scanning experience. It's all part and parcel of Uniden HP-series scanner ownership in my opinion.

So, if you don't use or fully understand location control or service types, you'd better start learning...

1808. Question for 536hp owners or informed people

Yahoo group: BCD536HP
Date: 2015-03-10 00:32:29 UTC
From: neil.neilbell@...
Topic: 1808 Message: 1808

Questions for people knowledgeable about the Uniden 536hp:

Has the battery discharge problem been resolved in newly purchased scanners?

Is the audio recovery for SF Bay Area P25 systems been improved over my 996XT?

Is the Sentinal software usable and USEFUL for programming the scanner?

Any good third party software working for this 536hp (like freescan, etc)?

Neil Bell, KJ6FBA

1809. Re: [BCD536HP] Question for 536hp owners or informed people

Replied elsewhere, but...

Uniden has a program to deal with the battery issue. It's likely the new ones were checked for the issue.

Not in SF, or anywhere near, so can't comment on that.

Yes, Sentinel does anything you need to program the scanner. Other SW may have more bells and whistles, but that's not what you asked.

Only alternative SW I know of is ARC. ProScan may also support it (not sure about that one).

From: Ed (K9EDK)
Topic: 1808 Message: 1810

I’m not as knowledgeable as so many others out there, but I can answer a couple of your questions.

The battery issue will be eternal, from the explanations I’ve gotten from everyone but Uniden.

The audio problems I had in Phoenix with my 996 are much better with the 536 (and the 436). MUCH better.

This covers both of your last two questions. I am an avid ARC Software user, but prefer the Sentinel software over the ARC Software for the 436/536. Once you understand the hierarchy of the way the radio is programmed, the software is a breeze, and I was able to transition easily from my 396/996 radios.

Ed

Adding to the others, Sentinel (as far as I know) is the only way to update the entire database in the scanner. A few more tweaks and features, it'll be awesome.

My take on the clock battery issue is that Uniden has identified the problem's cause and has (or will very shortly) put in place a process whereby you send your radio in and it gets a quick turnaround, within a couple of weeks. BUT you should follow Uniden's process for the return/repair, possible RMA number that might be needed. Search last weeks posts and you should find a post where the Uniden info has been forwarded to the group. As far as this issue being an ongoing problem, all I can tell you is my 3 BCDx36HP radios never had this problem. It's been a year now without issue. So the problem was isolated to certain production batches which have been identified. Of course, it remains to be seen how long the useful life of this battery is. But I'm sure Uniden didn't design a radio with an internal, (non-accesable to the user) battery that would require routine replacement every year or two years or even 5 years. Who wants to buy a radio you have to continually return for new clock batteries?

The Sentenel software comes with the radios as part of the purchase price and is fully functional. (You might want to get an "Easier to Read" instruction manual that someone was nice enough to compile or buy the Jiffy manual to better understand how to program your radio. Radioreference.com capable. A note on RadioReference; a subscription donation is recommended-not sure if required but it's a good idea to help support the totally volunteer effort of compiling this massive database.

Bill

Aftermarket software is available. Butel produces a product called ARC536PRO, which also allows connection to RadioReference.com where you can customize the programing of your radio by downloading systems, services and departments into Favorite Lists (FL).

When Paul said that the RTC design was the same as the HP-1, that was enough to put me at peace. The HP-1 has been around long enough to prove that its RTC design is up to par, so unless the statement is false (which I doubt), I am convinced that it is again a supplier/parts problem, and not something that we will see on a regular basis.

Thanks Dewey,

I didn't know that about it being the same as the HP-1. I have one of those on my motorcycle (along with an amplified speaker) which I store in the travel pac for extended periods of time and never noticed if the clock needed to be reset. It's ok with me if it doesn't tell the right time because I didn't buy it to tell time. And as long as it doesn't prompt me to reset the clock every time I turn it on I couldn't care about it. Does the Hp-1 do that like the 536?

Sentinel will handle all your programing needs. It is all I use.
Regarding third party software; I use Proscan. The display looks like
and has all the buttons the 536HP has. Plus, being sight-impaired, I
like the big display Proscan gives.

1816. BCD536HP/BCD436HP/HomePatrol-2 Real-Time Clock

Yahoo group: BCD536HP
Date: 2015-03-11 19:16:57 UTC
From: Uniden UPMan
Topic: 1816 Message: 1816

First, I want to apologize for the delay in starting thisprogram. We've been studying the long-term results from the initially proposedfix, and found them lacking. We will continue to study for a hardware solution,but in the mean time we will make some software changes to remove a lot of theannoyance loss of an accurate real-time clock has been causing.We will issue an update for the BCD536HP, BCD436HP, andHomePatrol-2 (which, while not currently exhibiting the problem shares enoughof the design features that we suspect they might start to arise on some units)that will do the following:

- Upon startup, if the clock setting has beenlost, you'll simply be asked if you want to set the clock. If you answer "Yes",then you will go through the existing dialog. However, if you answer "No" thescanner will set a default (incorrect to real-time) time and otherwise startnormally. The default clock setting will allow the scanner to operate normallyfor events that happen on a timed basis, but otherwise don't rely on having theactual real time known.
- Many files that are currently named based on thetime setting will change to be named based on a simple sequential numberingbasis (i.e. file0001, file0002, file0003).
- If you request a function where knowing thecurrent time is helpful, and you booted using a default time rather than theactual time, then you will again be prompted, asking if you want to enter thecorrect time. If you answer "No" then the default time will continue to beused. Knowing the correct time is helpful for Record (so that when you playback, you can see the actual time stamp of each recording) and for WeatherAlert (which has events that expire at specific times), but the functions willcontinue to operate, albeit not ideally, using any random time.

There might be some other minor changes relating to theabove adjustments, but the above hits the high points.We are still working with engineering to determine atimeline for this update. Note that we are prioritizing this work ahead ofother firmware tasks, so developing this fix will delay slightly the release ofthe Analyze functions for the BCD436HP and BCD536HP beyond what I hadpreviously estimated.Again, Uniden cannot even begin to apologize enough for thisissue. We do thank you for your patience and understanding.

1826. RE: [BCD536HP] SIREN APP AVAILABLE!

Yahoo group: BCD536HP
Date: 2015-03-16 16:55:36 UTC
From: Mark K9BOO
Topic: 1818 Message: 1826

A question for those with the Siren app:

Is the Siren app functionality limited to a "local" connection on the router (i.e. LAN access only)? The alternative would be access via the internet remotely (WAN access).

Recently, I noticed the Uniden web site product page listing reading a bit differently from other, previous Uniden materials:

"...the Wi-Fi feature lets you use the exclusive Uniden Siren App on your smartphone or tablet to access your scanner from anywhere in your home or vehicle+. "

The previous description indicates access over the Internet while the more recent description above could mean access limited to a local area network.

Thanks much.

Mark

The scanner can be set up as either a client on your existing network or as an access point in which it is its own network.

When you use it around the home, connected to your existing network it's just another client on your network. Done properly, you can configure your router/firewall such that it can be reached from outside your LAN by using a dynamic DNS service. This would allow you to access your home scanner from virtually anywhere in the world where you have a data connection on your smart-phone. However, this is beyond the scope of Uniden's documentation and technical support so once you have it working around the house on your own LAN, you're on your own getting it to work outside your LAN.

In your vehicle, it's intended to utilize the direct-connection method of WiFi connectivity (peer to peer). You connect your smart-phone to the 536's 'network SID' it's broadcasting and then it reaches as far as the WiFi dongle's radio can be heard by your smart-phone's WiFi radio.

They're two completely different methods of operation with their own built-in limitations. Better brush up on your network knowledge I guess.

You can configure your router to port forward, but eventually it is
expected that the app will allow connection anywhere you have internet
without the need for custom routing.

I don't have the app since i'm an Android user.... But I would think that if on your router you would port forward port 8080 to your WiFi module and then on the siren app use your ISP public IP it should work.

1832. Re: [BCD536HP] SIREN APP AVAILABLE!

Yahoo group: BCD536HP
Date: 2015-03-16 17:31:53 UTC
From: Rick WA6NHC
Topic: 1818 Message: 1832

So in theory (haven't played with this yet), if you port forward both port 554 (audio) and 50536 (control) in your router to your scanner IP, you'd be able to use Siren using your public IP address. That's something worth trying, you'd be able to hear your home scanner from anywhere. I'll make some time to play with that, likely not today though.

Caveats:

* only _one_ connection at a time, the scanner isn't able to manage multiple connections (which can be quite intensive). To do multiple (audio) connections, you'll need a real audio server (which won't show control/channel displays).
* it will only work if the router appears as the source *if* the scanner limits to the LAN IP addresses (an unknown).

Will remotely adding/removing of favorites be an option later? If not, I have to brush up on Quick Keys as I've never used them. ;o) I keep a list of favorites that change according to what I want to hear, which changes with the time of year. Fire season/winter cops/no cops...

I note (NOT complaining) that the audio delay is greater using Siren than VLC, enough that the display shows scanning started again while the audio is just being heard (audio latency about 3 seconds). I'd expect that later versions may be able to tighten this up (or extend the display delay setting in the scanner or app).

It will be interesting to see just how much remote control and audio the scanner will be capable of handling.

Perfect! Best of all worlds, a local scanner for traveling while hearing home from anywhere. And an off switch when it gets to be just noise. :o)

Thanks Joe. Can you tell me where you got the expectation you wrote about?
Is it based on any vendor communication/announcement?

"...but eventually it is expected that the app will allow connection
anywhere you have internet without the need for custom routing.".

Thanks much.

Mark

It was from a post by UPMan, but I don't recall
exactly where. It was about a month ago or so.

This is also assuming Uniden's plans haven't changed.

Depending on how successful people are with setting
up their own port forwarding, it's possible they may
delay or abandon plans for another scheme.

Of course, port forwarding would not always work for non-static IPs.

1837. Fwd: [BCD536HP] SIREN APP AVAILABLE!

Yahoo group: BCD536HP
Date: 2015-03-16 18:03:15 UTC
From: Rick Bates, WA6NHC
Topic: 1837 Message: 1837

I ran a very quick test. The scanner can be controlled (watched) by multiple sources at the same time (my iPhone and iPad were used, both on Siren) but the AUDIO is single sourced (only one device will get the audio). This was only done on my LAN.

An app to repeat the audio for multiple listeners will still be required. That will require some fancier port forwarding (one for control, the other to the audio repeater app).

Is it safe to presume that rtsp is used within Siren for the audio chain?

That's all the time I have for testing today, but it's looking VERY promising. Well done!

Rick, WA6NHC

iPad = small keypad = typos = sorry ;-)

> Caveats:
> only one connection at a time, the scanner isn't able to manage multiple connections (which can be quite intensive). To do multiple (audio) connections, you'll need a real audio server (which won't show control/channel displays).

Thanks Joe.

Port forwarding the control should be a no brainer. Setting up a rtsp repeater for multiple audio feeds is quite a bit more effort (my preference would be under linux since I already have that running 24/7).

Back to work...

Rick, WA6NHC

1840. "Advance" Swap should be implemented for 536 warranty issues

Date: 2015-03-16 18:29:16 UTC
From: Evan Platt
Topic: 1840 Message: 1840

I just sent my 436 for repair for the clock battery issue, and now it seems my 536 is seeing the same issue. I have my 536 on at LEAST 4 hours a day - reason I can say at least 4:
I have it wired to my igniton off of a second battery, so it's on when my car starts. It's running off a secondary battery which is on a timer, and when I turn my ignition off, it runs for an additional hour and a half. So my commute is 45 minutes on a good day, 1 hour normally. So figure minimum 2 hours in the morning and 2 hours at night. And now it's started with the "Set Clock" in the morning. I got home Friday night around 8 PM, and Saturday morning at 7 AM, it already said set clock.

So here's the problem: I'm not an installer, and the 536 is mounted in the dash - installer did a real nice job. It's right below the FM radio. So I'm going to have to go to a shop to have it pulled out. If I can go there once and just have them pull out the radio then swap in a replacement, I'm only charged labor once. Otherwise, if I have to go, have them pull the radio out, ship the radio to Uniden, then wait till I get it back and go back to the shop, I'm charged labor twice. So I'm wondering if they can send me a refurbished unit with the fix, and I send my 536 back once I get the replacement?

I'd say that's only fair and should be an option.

1842. Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-16 20:03:07 UTC
From: Rick WA6NHC
Topic: 1837 Message: 1842

Thank you Joe. Break time, so I have two questions that you might be able to answer.

I realize that this is a work in progress. My end goal is to be able to hear my (home) scanner from anywhere, available to multiple other listeners regardless of platform, via any web browser. The Siren app is certainly a great start!

If an app to allow anyone to 'see the display' and hear the scanner by any web browser will be forthcoming from Uniden, this is all moot (and excellent news, I already forward web pages to my linux server). That would be the 'best' simplest answer for many users interested in listening from afar. (Any 'remote control' limited to specific iOS/Android users only is reasonable security.) Anyway... back to nuts and bolts stuff I'm curious about...

Is the audio being spooled to the memory card first for transport via the scanner's rstp server routine? (explains the latency) If so, it might be possible to (via the serial port?) source that file then stream it out using another rtsp server. Source the card's file(s) and stream it, no matter the OS.

That would be simpler than making an rtsp repeater... computer reads the scanner file and streams it, router port forwards audio stream from computer while also forwarding scanner control port. Using text mode linux, this is NOT a trivial thing to accomplish (I'm constrained to not use the audio card in that computer, it's already being used for other things).

If not, then rtsp repeater sources scanner stream then resends it out the same port value, forwarded by the router to the world; messy for most generic users.

Next question... any idea what outside port (range) is required to initiate the connection request for the rtsp audio stream? If not 554, that port (range) would have to be forwarded into the scanner as well to start the stream.

Thanks in advance,
Rick wa6nhc

Opening all ports is not a grand idea, you just dropped your computer pants to the wildness of the Internet. Many routers won't do this anyway.

For temporary nakedness, put the computer in the DMZ. Anything NOT already forwarded by the router will be dumped at that computer. When done playing, forward only the required ports at the target computer and take it out of the DMZ (unless it's REALLY robust like linux).

Often there is a control/data port pair for data transfer. 554 appears to be the data port, but what is the control port (so the scanner knows WHO to send the data to)? That must (if it exists) be handled by routing too.

1844. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-16 20:18:46 UTC
From: MCH
Topic: 1837 Message: 1844

The latency is primarily due to the D-A conversion in the device or SIREN app. I would think the audio is streamed from the card, but I don't know the answer to that one. If not, then there would be additional latency in the WiFi dongle from the A-D conversion as well.

Ports should be 50536 for data and likely either 8000 or 8080 for audio. I don't recall that one offhand. You could try making the scanner the DMZ as well. I've never tried that one, but it should work.

Not sure it uses 8080 as that's one my security system uses and I have no conflicts. It could be possible one of the programs uses the next available port though.

Sent from my Verizon Wireless 4G LTE DROID

Alas my linux boxes are already in the DMZ at both locations I use...
but an interesting idea for anyone else... You can't hack into what
isn't there...

The latency is easily triple what VLC gets, by using the Siren app, so
it's interesting...

Thanks,
Rick

You can adjust the latency on VLC (to some extent). You can't on SIREN.
It would be nice to see that added to the settings, though.

When listening from another room, it's annoying. If I'm someplace not in audible range of the scanner, I wouldn't know. 3 seconds is not critical, 99.9% of the time. Not worthy of spending much effort on when other things need to be finished.

IF they mounted it properly you should be able to remove it quickly yourself.

If you notice on both sides of the radio there are 2 slots about 1/2" in size. These are used to remove the radio or in this case scanner from the internal sleeve.

Your installer should have left you with the removal tool. It's a small piece of metal about 6" Long.

You would simple insert these in both sides and pull the scanner out.

Well I wish it were that simple..

Not sure if this photo will make it - not my car but same model

The Bezel goes around the stock stereo and the scanner. I can't access the screws (scanner is actually scdrewed in) without taking out the bezel. Taking the bezel out requires a few tabs, and then a bunch of things disconnected - the AC controls, the hazard light control, etc.

I'm not aware of an online order page. But when you do get through on the number you posted (it's a good number-just takes all day) perhaps you might ask them if they have an online order page. I forgot to ask when I called. But since I didn't know the part number I wanted, I had to call them anyway.

Bill

Are you on a LAN?

Try clicking SETTINGS then CONNECTION then hit ACCEPT.

1856. Re: [BCD536HP] Uniden Scanner Parts

Yahoo group: BCD536HP
Date: 2015-03-17 15:22:55 UTC
From: Jeff Dale
Topic: 1852 Message: 1856

I was just on with them on Friday and it took about 35 minutes. I waited on hold so long when the guy came on I forgot who I was calling.

I asked about online ordering and they said that it's not available for the public at the moment.

From: Jeff Dale
Topic: 1837 Message: 1860

I don't personally have any Apple devices but I am willing to work with someone who has one to get the whole internet control/streaming working.

We can work via Skype or something to try and sort out the settings needed.

If anyone is interested email me directly.

1864. Scanner On The Internet - Yay!

Yahoo group: BCD536HP
Date: 2015-03-17 19:39:25 UTC
From: Rick WA6NHC
Topic: 1864 Message: 1864

I had a few minutes to play while home this morning.

I port forwarded my home router to point at the scanner the following (both TCP and UDP) ports (comments in parenthesis on the router for me later, so I don't have to remember who/why):

554 (Scanner Audio)
50536 (Scanner Control)

I rebooted the router (because not all routers add port forwarding ALL the time as the entry is made; call it insurance). I confirmed that the port forwarding was still in place.

I entered my PUBLIC IP address (found on the router status [NOT the 192.xx.ww.yy] page since I can't enter my FQDN address) in the Siren App; it works beautifully. My scanner is now reachable via the Internet to ONE user, me. All current Siren functions work, audio is being passed along.

My home LAN is on cable, it RARELY changes IP address, but isn't to difficult to find out remotely, if changed.

-=-=-=-=-=-

Next project when I have a block of time: install, configure and run an rtsp server (on my linux box since it lives in the DMZ already), sourcing the scanner directly (I'll test it using the VLC app); then change the router port forwarding FOR THE AUDIO ONLY to the computer running the rtsp server. This will (should) allow more than one AUDIO listener for the scanner.

Final project on this stream: Create a web page based player so anyone with any web browser can hear the scanner audio AND see what channel is talking. It won't be pretty, I believe in function before form (make it work THEN make it pretty).

**If Uniden is going to evolve to these last two wants in the (near) future (while still developing the Siren App); I'll wait because it is more effort than I wish to expend and there is no use reinventing the same wheel. Since I want the results on my linux box, I can forward their 'web page' to my server and correct the links for the audio stream on my server (don't want another Windows app, that machine is already as busy as I want it, the linux machine is still under utilized and far more capable).

More when I have the time to play, but this is working for my immediate wants.

Best regards (73), good luck (gl)
Rick WA6NHC

1865. Re: [BCD536HP] Was: SIREN APP

What I found... it may apply here.

Tap the lower scanner line (NOT the app line, the one showing what is scanned) to ensure that it goes into hold. Tap again to scan. That proves the control portion is working. Yes, if you see it changing it SHOULD be working so far, this is insurance.

Press the MUTE function (app, bottom line). It should turn YELLOW. Tap it again and it should go white.

You should now hear the audio.

For some reason, the audio link isn't as solid a connection on app start up. Once made, it's fine until you change devices (only one at a time for audio).

So try this and report back please.

Thats really odd since there's nothing other then being on the same network and entering the correct network ip the scanner on into siren app. I'm out of options for you.

1868. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-17 20:38:55 UTC
From: N1CHU
Topic: 1837 Message: 1868

I tried successfully putting the scanner on hold by tapping the lowest of the three as you specified. It did communicate with the radio, putting it on hold. I then unlocked the hold and scanning resumed. I then tapped the mute button and it turned yellow, tapping it again returned it to white. But still no audio...

On Mar 17, 2015, at 3:44 PM, Rick WA6NHC HappyMoosePhoto@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

What I found... it may apply here.

Tap the lower scanner line (NOT the app line, the one showing what is scanned) to ensure that it goes into hold. Tap again to scan. That proves the control portion is working. Yes, if you see it changing it SHOULD be working so far, this is insurance.

Press the MUTE function (app, bottom line). It should turn YELLOW. Tap it again and it should go white.

You should now hear the audio.

For some reason, the audio link isn't as solid a connection on app start up. Once made, it's fine until you change devices (only one at a time for audio).

So try this and report back please.

Try access mode on scanner
Default password to connect to iPhone or ipad is uniden-scanner
Check scanner for ip should be 192.168.1.1 enter that into siren app

From: Michael O'Brien
Topic: 1837 Message: 1874

Sorry. On scanner go to wifi setup, set connection, access point mode. Just keep hitting E yes for the setup since you are keeping the default settings can be change later. On iPhone go to settings, wifi look for bcd536hp wifi and connect to it password will be uniden-scanner Your ip to the scanner ip should be 192.168.1.1 then, because it's transmitting it's own Wi-Fi

Michael

I think he meant access point mode.

Sounds like you are using infrastructure mode if the ip is not 192.168.1.1

Joe M.

1876. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-17 23:38:31 UTC
From: N1CHU
Topic: 1837 Message: 1876

Michael,

I did as you instructed... Got an IP of 192.168.1.2 and set the app to it. Still not getting the audio. Beginning to wonder about IPhone settings that may need to be configured. I'm also checking Upman's Twiki.

On Mar 17, 2015, at 7:24 PM, Michael O'Brien obrienphotos@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Sorry. On scanner go to wifi setup, set connection, access point mode. Just keep hitting E yes for the setup since you are keeping the default settings can be change later. On iPhone go to settings, wifi look for bcd536hp wifi and connect to it password will be uniden-scanner Your ip to the scanner ip should be 192.168.1.1 then, because it's transmitting it's own Wi-Fi

Michael

1877. RE: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Yahoo group: BCD536HP
Date: 2015-03-18 00:06:26 UTC
From: Joe Polcari
Topic: 1840 Message: 1877

If the “Pro” can do it, so can you. Get the manual for your car and it will show you the points on the plastic bezel to pry it off. Then, if it’s a DIN mount, as was stated, you’ll see the slots. Get a metal coat hanger and cut off a couple of 8” pieces and push them in the slots and the scanner should just pull out.

Subject: Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Not sure if that made it through, but here's an actual pic of my car

http://www.espphotography.com/carsetup.jpg

You can see how you can't access the screws on the 536 :(

On Mon, Mar 16, 2015 at 4:07 PM, Evan Platt <evan@espphotography.com> wrote:

Well I wish it were that simple..

Not sure if this photo will make it - not my car but same model

The Bezel goes around the stock stereo and the scanner. I can't access the screws (scanner is actually scdrewed in) without taking out the bezel. Taking the bezel out requires a few tabs, and then a bunch of things disconnected - the AC controls, the hazard light control, etc.

On Mon, Mar 16, 2015 at 2:31 PM, Jeff Dale jeff.dale@gmail.com [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

IF they mounted it properly you should be able to remove it quickly yourself.

If you notice on both sides of the radio there are 2 slots about 1/2" in size. These are used to remove the radio or in this case scanner from the internal sleeve.

Your installer should have left you with the removal tool. It's a small piece of metal about 6" Long.

You would simple insert these in both sides and pull the scanner out.

On Mon, Mar 16, 2015 at 2:29 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I just sent my 436 for repair for the clock battery issue, and now it seems my 536 is seeing the same issue. I have my 536 on at LEAST 4 hours a day - reason I can say at least 4:

I have it wired to my igniton off of a second battery, so it's on when my car starts. It's running off a secondary battery which is on a timer, and when I turn my ignition off, it runs for an additional hour and a half. So my commute is 45 minutes on a good day, 1 hour normally. So figure minimum 2 hours in the morning and 2 hours at night. And now it's started with the "Set Clock" in the morning. I got home Friday night around 8 PM, and Saturday morning at 7 AM, it already said set clock.

So here's the problem: I'm not an installer, and the 536 is mounted in the dash - installer did a real nice job. It's right below the FM radio. So I'm going to have to go to a shop to have it pulled out. If I can go there once and just have them pull out the radio then swap in a replacement, I'm only charged labor once. Otherwise, if I have to go, have them pull the radio out, ship the radio to Uniden, then wait till I get it back and go back to the shop, I'm charged labor twice. So I'm wondering if they can send me a refurbished unit with the fix, and I send my 536 back once I get the replacement?

I'd say that's only fair and should be an option.

There are no screws to see - the slots on each side release in, if it's mounted (properly) in a DIN sleeve.

Before you set the app, you have to connect your device to the scanner in AP mode.
Look for something starting with BCD536 on the wifi.

E yes for the setup since you are keeping the default settings can be change later. On
iPhone go to settings, wifi look for bcd536hp wifi and connect to it password will be
uniden-scanner Your ip to the scanner ip should be 192.168.1.1 then, because it's
transmitting it's own Wi-Fi

That's why I wanted you to try this but you shouldn't have gotten that ip. Very interesting. Do you have the latest firmware for the dongle? Check on scanner wifi info see if it says version 7.28 under the ip. Also what's the scanner firmware version?

Michael

1882. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-18 00:45:59 UTC
From: N1CHU
Topic: 1837 Message: 1882

That's one thing I'd like to try... Deleting the app and reinstalling it. I use iCloud an got the cloud symbol which meant I wasn't getting a fresh copy of the app. So I turned off iCloud delegated the app and tried to download a fresh app but the cloud symbol was still there. Wonder what that's all about. I expect I only got a reinstall of what I wanted to get rid of.

I've seen them do it, my concern is breaking something. I'm not the most deliciate person in the world. And if I recall, the cords (Power, antenna, speaker) aren't the longest, so I'd need to 'tie' them somewhere so they don't fall into the dash somewhere. And regardless, whether I do the work or someone else does the work, I'd rather take it apart once, swap in a scanner, and be done as opposed to take it apart, take out the scanner, put it all back, have a huge hole in my dash for 2+ weeks (or more), then have to take it all apart again to put the replacement scanner back in.

I've e-mailed Uniden and Paul to ask, but I don't think it's an unrealistic request. Many companies I've dealt with do this.

Especially when it's such a huge and common problem.

If so, they didn't install it using the manufacturer's recommended procedure.

Best to let them take it apart since it's a custom install.

Come to think of it, unless you specifically asked them to put screws into the scanner. I would argue with any bill for the job since they chose to mount it in such a way that prevents standard removal which would not require removal of the bezel at all.

Are you absolutely sure the screws are into the scanner, and not just holding the DIN sleeve to the dashboard? (which would be the norm)

No, can't say for sure. I can't recall if they asked me. But regardless, I need to remove the bezel to get to the scanner. That's not their fault, that's the design of the car. The bezel covers part of the scanner. So even if it used the standard 'keys' to remove the scanner, I'd need to remove the bezel. If the bezel simply pulled off, I'd have no problem unscreiwng the scanner. That's the easy part. It's the bezel removal that has me concerned.

From: N1CHU
Topic: 1837 Message: 1891

All,

I'm stopping at the Apple Store today. I've noticed I've lost the audio on all the things I've tagged like when I receive a text or email it goves me an audio alert. Well, now it doesn't and I can't find where to turn it back on. So before we go any further, I must resolve this. Don't want to be the guy who winds everybody up with "Why won't my TV work?", having you rack your brains, when all that was wrong from the get-go was I forgot to plug it back in after removing the plug so I could vacuum. I will let all know how I make out and proceed from there.

Bill

1892. Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Yahoo group: BCD536HP
Date: 2015-03-18 10:03:38 UTC
From: N1CHU
Topic: 1840 Message: 1892

The coat hanger idea is dependent on the thickness of the coat hanger. The slots on the 536 are not big enough to accept a coat hanger. And, correct me if I'm wrong but doesn't the 536 come with those "keys?"

On Mar 17, 2015, at 8:06 PM, 'Joe Polcari' Joe@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

If the “Pro” can do it, so can you. Get the manual for your car and it will show you the points on the plastic bezel to pry it off. Then, if it’s a DIN mount, as was stated, you’ll see the slots. Get a metal coat hanger and cut off a couple of 8” pieces and push them in the slots and the scanner should just pull out.

Subject: Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Not sure if that made it through, but here's an actual pic of my car

http://www.espphotography.com/carsetup.jpg

You can see how you can't access the screws on the 536 :(

On Mon, Mar 16, 2015 at 4:07 PM, Evan Platt <evan@...> wrote:

Well I wish it were that simple..

Not sure if this photo will make it - not my car but same model

The Bezel goes around the stock stereo and the scanner. I can't access the screws (scanner is actually scdrewed in) without taking out the bezel. Taking the bezel out requires a few tabs, and then a bunch of things disconnected - the AC controls, the hazard light control, etc.

On Mon, Mar 16, 2015 at 2:31 PM, Jeff Dale jeff.dale@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

IF they mounted it properly you should be able to remove it quickly yourself.

If you notice on both sides of the radio there are 2 slots about 1/2" in size. These are used to remove the radio or in this case scanner from the internal sleeve.

Your installer should have left you with the removal tool. It's a small piece of metal about 6" Long.

You would simple insert these in both sides and pull the scanner out.

On Mon, Mar 16, 2015 at 2:29 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I just sent my 436 for repair for the clock battery issue, and now it seems my 536 is seeing the same issue. I have my 536 on at LEAST 4 hours a day - reason I can say at least 4:

I have it wired to my igniton off of a second battery, so it's on when my car starts. It's running off a secondary battery which is on a timer, and when I turn my ignition off, it runs for an additional hour and a half. So my commute is 45 minutes on a good day, 1 hour normally. So figure minimum 2 hours in the morning and 2 hours at night. And now it's started with the "Set Clock" in the morning. I got home Friday night around 8 PM, and Saturday morning at 7 AM, it already said set clock.

So here's the problem: I'm not an installer, and the 536 is mounted in the dash - installer did a real nice job. It's right below the FM radio. So I'm going to have to go to a shop to have it pulled out. If I can go there once and just have them pull out the radio then swap in a replacement, I'm only charged labor once. Otherwise, if I have to go, have them pull the radio out, ship the radio to Uniden, then wait till I get it back and go back to the shop, I'm charged labor twice. So I'm wondering if they can send me a refurbished unit with the fix, and I send my 536 back once I get the replacement?

I'd say that's only fair and should be an option.

Topic: 1840 Message: 1893

I think the confusion here is (as related to the DIN sleeve) how it was used, IF one was used. I have used a double DIN both ways. I used screws on one install and the "slide in/slide out" (intended method of a DIN sleeve). Now, this IS a custom job. There are other dashboard installed items that first need to be removed in order to get at the mounting system for the radio. But one thing is for sure, in this particular install, screws WERE used. So the radio will not be easily slid out. And at the risk of repetition, the entire concern started when it was learned there would be additional labor costs to remove and replace the radio in order to return it to Uniden for service. The install job was beautifully done-looks great! But Monday morning quarterbacking tells me there's one question that wasn't considered in the planning stage (or may have been thought of but discounted). What happens if I need to remove that radio? It's happened to me in the past, teaching me a lesson or two. If I lived close enough to this problem I'd uninstall the thing for the owner without charge, and investigate the use of a DIN sleeve when reinstalling.

I suggested perusing the Crutchfield website to look at their direction sheets available but the other stuff that first needs to be removed could possibly be what's scaring the owner. Even though Crutchfield shows how to do that too!

A caution to the owner; if you do decide to tackle this yourself, wait for warm weather or find a heated garage. Plastic bezels and the such are not very forgiving in cold weather-don't need to buy new parts if you don't have to.

Hope this helps,

Bill

1895. Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Yahoo group: BCD536HP
Date: 2015-03-18 13:14:00 UTC
From: Uniden UPMan
Topic: 1840 Message: 1895

If you are taking this out due to the clock issues, don't. We are not repairing any units for this issue at this time (still studying for a long-term fix). We started beta testing a firmware update, today, and hope to release something in the next couple of weeks. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Subject: Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

  Come to think of it, unless you specifically asked them to put screws into the scanner. I would argue with any bill for the job since they chose to mount it in such a way that prevents standard removal which would not require removal of the bezel at all.

Are you absolutely sure the screws are into the scanner, and not just holding the DIN sleeve to the dashboard? (which would be the norm)

Thanks Mike,

I never remembered the ring/silent switch on the side of the iPhone. Found it in the silent setting. Don't know how I turned it off but somehow I did. Test it out upon my return home. You saved me a trip to the Apple Store.

What would you suggest for WiFi connectivity? Use the dongle or my LAN? (I believe both have security options which I want to incorporate.)

Bi

1897. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-18 15:05:16 UTC
From: Michael O'Brien
Topic: 1837 Message: 1897

I recommend your Lan. The benefit is you are connected to your wifi and can close app and continue to use phone online. You won't have audio once you close siren till uniden fixes that. Using the dongle you are only connected to scanner have to switch back to wifi or your carrier 3G or 4G is a pain. I'm also having problems with the iphone dumping the dongle connection going back to my wifi.

Michael

From: Rick WA6NHC
Topic: 1840 Message: 1898

No. The 'key' comes with the DIN sleeve, which is an optional package.

Rick

1899. Re: SD Card Issue

Yahoo group: BCD536HP
Date: 2015-03-18 15:20:08 UTC
From: ws0z@...
Topic: 1792 Message: 1899

I just experienced a similar situation with my 536. It started with me turning it off, which has been something I've tried to avoid due to past issues I've had with this scanner not coming back on. This time the screen was completely blank when I turned it back on. I tried to power cycle it a few times and still nothing. I removed the SD card and turned it on and the screen at least showed something, though just an error about not having a card. Tried again with the card and nothing.

I had just obtained a 64 GB card for something else, but wasn't using it yet, so I tried the steps to get it going. The card had the files copied to it when I did the erase user data option. I tried with and without writing to the scanner (to get my config back), but the scanner kept giving an SD card error with the card. I cleared the old card manually (or at least tried) and eventually got to the point the card wasn't readable or usable at all (the original 4GB card).

I found an old 16GB card from an old phone that wasn't in use and thought I'd try it since it was old enough it should be recognizable by the scanner vs. the new 64GB card. I put the card in and got an error. I then went through the process of clearing the user data (though nothing was on it). I had to show all drives to get it to show in sentinel. Once I did that and removed the cable, the scanner came to life. I then chose to write to scanner (which then showed up) and everything seems fine now.

So at least in my case, the newer 64GB card was unusable by the scanner, but the old 16GB card is working fine and the original 4GB is dead.

One thing I'm noticing is that the 64GB and the 16GB cards both showed up as mass storage devices within maybe 10 seconds when connecting the cable, where the old 4GB took maybe a minute. So now I'm wondering if the SD card was the source of all my prior issues with the scanner. Silly that something so small can cause so many issues with this scanner.

For reference, the 64GB card I tried is class 10. The original 4GB and the 16GB I'm now using are both class 4.

I hope this helps others having similar issues.

Understood. Thank you. I will post once I return home, my results.

Bill

On Mar 18, 2015, at 11:05 AM, Michael O'Brien obrienphotos@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I recommend your Lan. The benefit is you are connected to your wifi and can close app and continue to use phone online. You won't have audio once you close siren till uniden fixes that. Using the dongle you are only connected to scanner have to switch back to wifi or your carrier 3G or 4G is a pain. I'm also having problems with the iphone dumping the dongle connection going back to my wifi.

Yes, it comes with the "keys", and in the event you
don't have those, some small knives will work.

1904. Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Yahoo group: BCD536HP

From: Rich Carlson
Topic: 1840 Message: 1904

If the radio was properly installed in the DIN sleeve then it should be able to be removed using just the keys. The keys would come packaged with the DIN sleeve.

The installer should have left enough tail on the antenna and power leads to properly remove and reinstall the radio. Just be sure to insulate the power connector when the radio is removed to avoid shorts

Rich Carlson, N9JIG

1905. Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

So based on your previous comment - the RTC failure will still obviously be an issue, however this firmware fix will allow me to press a key to bypass having to reset the clock, however the clock than will be off?

That to me wouldn't be an acceptable fix. That could mean - potentially every day (assuming I turn on the scanner every day), the scanner could be 3-4 hours off. So after a week (7 days), the scanner could be 24 hours off?

Rich is correct about the keys - they technically come with the DIN
sleeve, not the scanner, and the DIN sleeve is optional.

From: Evan Platt
Topic: 1840 Message: 1907

Again, I have to remove the bezel to be able to get to the radio. Removing the radio from the din sleeve isn't the tricky part, that's the easiest part. And it is held in with screws.

Success. iPhone is working with the Siren app.

Original complaint;

No audio

Cause of complaint;

Operator error. More commonly referred to as DAS (Dumb Ass Syndrome)

Detailed specifics of cause;

I had the slide audio on/off switch on the side of my iPhone inadvertently turned off and did not even consider checking the switch. In fact, I had completely forgotten about that switch.

Thank you all for your effort.

Bill

1910. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-18 18:13:10 UTC
From: N1CHU
Topic: 1837 Message: 1910

I know the Siren App is a work in progress and it may be a bit early for questions like this but this inquiry deals with parameters I expect are already in place, namely the size of the text in the 3 windows. I am running an iPad mini in my vehicle and I would like the ability to grow the size of the text at some point in the future...

1911. Re: [BCD536HP] Was: SIREN APP

Yahoo group: BCD536HP
Date: 2015-03-18 18:32:19 UTC
From: N1CHU
Topic: 1837 Message: 1911

Yea, that works too... I'm a bit ashamed that I asked for help, like crying wolf, when it was a simple issue overlooked. But on the upside, I realized I was getting a bit lazy, relying on the group instead of contributing to the group. The responses got me thinking again. Gotta watch that in the future. As usual, the group was great! Coming through for me and stimulating the thinking process worked. It's true that if we are not careful we will loose the ability to reason things out on our own. Gotta keep exercising the brain!

Now to go update the other 536 in my pickup with the newest dongle firmware and use my IPad mini as a "jumbotron". Then I can glance at the larger screen without taking my eyes off the road but for a split second. Lasik eye surgery has me seeing at a distance, without wearing glasses, but I gave up my close vision and need reading glasses. So I'm compensating.

On Mar 18, 2015, at 1:43 PM, 'Joe Polcari' Joe@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

My usual acronym is UBD, User Brain Damage.

Subject: Re: [BCD536HP] Was: SIREN APP

Success. iPhone is working with the Siren app.

Original complaint;

No audio

Cause of complaint;

Operator error. More commonly referred to as DAS (Dumb Ass Syndrome)

Detailed specifics of cause;

I had the slide audio on/off switch on the side of my iPhone inadvertently turned off and did not even consider checking the switch. In fact, I had completely forgotten about that switch.

Thank you all for your effort.

Bill

Minor update: Proof of concept

Using the Windows version of VLC, without any transcoding, I am able to re-stream the audio from the scanner to multiple devices at the same time. I'm using the iPhone/iPad VLC app (only for testing) to hear the scanner on the iPhone and the iPad at the same time (pointed the source to the Windows box, still limited to my LAN). There is significant latency, about 3 seconds, which is not critical for remote users, nothing new for Siren.

I briefly tried to port forward the audio stream from the Windows box and it works too, but it is limited to one client again. This appears to be a limitation of the router because it works flawlessly across the LAN. I may investigate later, but not likely because once I get my Linux box to re-stream, it's in the DMZ and I won't need port forwarding (for audio).

I am putting this info out there so others can follow along, perhaps share their scanner audio with several devices at the same time without it blasting anyone out in any room. The above is a basic how-to for your LAN.

It will require a spare or lightly used Windows box that stays on 24/7, the VLC Windows app, then you can use Siren or an rstp capable program (VLC) in multiple locations throughout your LAN. (Yes, a work in progress.)

If it is THAT important to you to re-stream your audio to a wide audience, you can through Radio Reference but that is public and limits you to Windows apps, an audio connection to the scanner and your sound card... things I'm not willing to give up. My intention is a very narrow, limited, local audience (and me no matter where I am traveling).

A brief look at creating a web page interface shows that it will be a fair amount of work, because most, if not all browsers do NOT know how to handle rtsp data transfers so at some point, transcoding and a mini app/player will likely be required for a web based player (my end goal).

I'm hoping that the Uniden team is moving in that direction. Perhaps enhance the control utility (display, not control) or something in that direction. We'll have to wait, no info has been released on that topic. Other needs for improvement are higher on the to-do list (RTC clock, Analyze...).

On the control utility, de/selection of favorites list(s) would be a really nice feature to have. :o)

I know, that utility was originally not intended for public release, but it's showing what's possible to manage remotely so well... it shows such terrific promise!

Subject: [BCD536HP] Re: SD Card Issue

I just experienced a similar situation with my 536. It started with me turning it off, which has been something I've tried to avoid due to past issues I've had with this scanner not coming back on. This time the screen was completely blank when I turned it back on. I tried to power cycle it a few times and still nothing. I removed the SD card and turned it on and the screen at least showed something, though just an error about not having a card. Tried again with the card and nothing. I had just obtained a 64 GB card for something else, but wasn't using it yet, so I tried the steps to get it going. The card had the files copied to it when I did the erase user data option. I tried with and without writing to the scanner (to get my config back), but the scanner kept giving an SD card error with the card. I cleared the old card manually (or at least tried) and eventually got to the point the card wasn't readable or usable at all (the original 4GB card). I found an old 16GB card from an old phone that wasn't in use and thought I'd try it since it was old enough it should be recognizable by the scanner vs. the new 64GB card. I put the card in and got an error. I then went through the process of clearing the user data (though nothing was on it). I had to show all drives to get it to show in sentinel. Once I did that and removed the cable, the scanner came to life. I then chose to write to scanner (which then showed up) and everything seems fine now. So at least in my case, the newer 64GB card was unusable by the scanner, but the old 16GB card is working fine and the original 4GB is dead. One thing I'm noticing is that the 64GB and the 16GB cards both showed up as mass storage devices within maybe 10 seconds when connecting the cable, where the old 4GB took maybe a minute. So now I'm wondering if the SD card was the source of all my prior issues with the scanner. Silly that something so small can cause so many issues with this scanner. For reference, the 64GB card I tried is class 10. The original 4GB and the 16GB I'm now using are both class 4. I hope this helps others having similar issues.

Amazing that someone would suggest an issue with the original
4 G SD card.
I had the same 'errors' in two of my 536's and it turned out that
both the original 4 G cards were bad after only 2 months use.
I put 8 G cards in the scanners, copied files from a third radio
and both the 536's came to life again. I'm hoping the 8 G cards
will last more than two months. The 8G cards are class 10.

1917. Siren App Modification

Yahoo group: BCD536HP
Date: 2015-03-18 22:38:26 UTC
From: N1CHU
Topic: 1917 Message: 1917

Is it possible to load the Siren App onto a Windows PC? What mods might be needed? I like the looks of the display (reminds me of the HP-1) and the practicality of seeing the display in a room other than where the radio is.

Thanks,

Bill

I've loaded OSX in a Virtual Machine and then loaded the IOS Dev Kit with
the emulator on top of that to run the app. Buggy but it works... somewhat

Evan,

Not sure how an Android app will help? I'm using the current Siren app... But I will hold on to the link you provided for future reference.

Thanks Jeff,

I wonder how much of that "buggyness" is associated with the display, and how much the audio?

1927. Re: [BCD536HP] Siren App Modification

Yahoo group: BCD536HP
Date: 2015-03-19 16:30:02 UTC
From: N1CHU
Topic: 1917 Message: 1927

Siren App works on my iPhone and iPad in the Infrastructure Mode but I can't get it to work in Access Point Mode.

If my understanding is correct, the Infrastructure Mode is the LAN (if I get too far away from my computer router I will loose connectivity) and Access Point Mode is when the radio is not using the LAN, just the dongle?

So if I want to use my iPad mini in my vehicle, I would need to connect to the 536 through its Access Point?

But so far I've had no luck (or little luck-don't remember but think it was running once) with Access Point. Is there a need to reset parameters each time when I want to use Access point?

Using both method your router would give you a little more distance then the dongle. Set up access point mode on scanner iPhone go to wifi look for the bcd536 wifi use the password to connect to dongle default is uniden-scanner
Enter the ip of the scanner in app that radio displays in wifi info on scanner and you are off and running

While I've not had the need to try it yet... But I intend to when I take the RV out next (scanner in RV+device in the cab=more cab space).

Put the scanner in access mode. Note the address [192.168.1.1], name and password (in previous emails, not at my fingertips).

Attach your device to that access point as you would for any other network, using the above info. [This will stop any other data connection normally used for email etc. The device will ONLY be connected to the scanner. This is why I'll use my Nook HD+ as the scanner device, it's wifi only and will keep me connected to my e-world on other devices.] Once connected;

Start the Siren app (or VLC in the case of my Nook until the Android flavor is released).

It should work now.

If not, figure out which part is not working correctly. Your range from the scanner will be VERY small (measured in feet) and greatly depends on what the signal has to pass through to get to your device (and vice versa).

I've noted that connections for the audio stream are um, fragile. Control is robust, no issues. It may take a few retries to get the audio stream to flow to your device. Once started, it is stable, until you switch to another device.

Ok. I missed a step. Working now on access point. It's what I want for the iPad's larger multi-colored display in the vehicle. I'd be out of range using the infrastructure home LAN.

Thanks,

Bill

Well to be honest when you layer virtual on top of virtual you have to
expect some bugs.

Since Uniden doesn't have 20 developers working on this project I suspect
that they can only progress so far at a time.

Eventually they will get it all figured out.

That was more of a lead in questioning if you could be more specific as to the bugs in countered. You say "buggy"... I say "how so?"

On Mar 19, 2015, at 12:17 PM, Jeff Dale jeff.dale@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Well to be honest when you layer virtual on top of virtual you have to expect some bugs.

Since Uniden doesn't have 20 developers working on this project I suspect that they can only progress so far at a time.

Eventually they will get it all figured out.

1949. Need Help Configuring for WAN (Internet Access)

Yahoo group: BCD536HP
Date: 2015-03-20 03:01:27 UTC
From: kg5aen@...
Topic: 1949 Message: 1949

I have an IP of 192.168.1.154 that I have reserved for the Scanner. While connected to LAN everything works perfectly.

I have then forwarded 554 (Scanner Audio), 50536 (Scanner Control) both tcp and udp to 192.168.1.154. I then try to access the scanner by Public IP (24.32.48.249) (Wish this supported FQDN) and I get the scanner control but I am getting an error on the RTSP side of things.

Error: Connection Failed - (RTSP/1.0 400 Bad Request).

Any help would be greatly appreciated!

Chris - KG5AEN

The fastest way is to put the scanner IP address in the router DMZ then point the app to the public address (NOT the 193.xx.yy.zz). Not challenging for most here.

The biggest problem is if your public IP changes often (DSL). You need a method to show the current IP.

You're still limited to one listener at a time.

The control port isn't being forwarded. I'm not sure what is being used, but try port 80 or 8080 (common).

Each connection has a control port and data port. Almost no one uses TCP 554 for rtsp for control (proper protocol), but will use UDP 554 for data stream. UDP is good because it doesn't wait for ack before sending more data, it presumes arrival and continues. It's bad because of the same reason, packets can get 'lost' (dropped).

Thank you for the heads up Michael! Interesting. That is extremely disappointing. You seem fairly knowledgable about this scanner stuff. I guess VPN would be an option albeit not a good one. My understanding when I bought the scanner was that the Siren App would give this functionality. I think the App would be able to act the same with the proper forwarding.

Thanks,
Chris Moore

Thank you I will give it a try and report back. Unfortunately the way my Cisco firewall is I am not able to create a true DMZ as it in itself requires separating the network with VLAN's and port forwarding or using 1:1 NAT. Since I only have a single IP that isn't possible.

Thanks,
Chris Moore

From: Rick Bates
Topic: 1949 Message: 1959

Chris,

I didn't use a VPN but did use router port forwarding. A VPN would not be the most efficient nor the easiest way to stream the scanner audio and allow control (and requires a computer 24/7).

But since I'm only port forwarding the two scanner ports I can't test further until I get the rtsp re-streamer running on my Linux box because I use port 80 (and others) on that box (in the DMZ) and altering that routing would disrupt my servers. The audio stream is fragile, easily disrupted and the re-streamer would shield the scanner and allow for multiple listeners. Win win.

The re-streamer concept works, I've tested that and listened and watched and controlled (Siren) on two iOS devices at the same time.

Soon I'll make time to play. I'll post the results. The tools are likely reproducible in Windows (VLC was tested), though I'll use Linux (my shack computer is already busy, I don't wish to add more tasks; the Linux box almost snores in boredom even though it actually does more; it is efficient).

Putting your scanner IP in the router DMZ should allow testing until a proper answer (app) is produced. I don't suggest that anyone leave anything in the DMZ that isn't capable to protect itself (the scanner is not). Test, then go back to normal.

The DMZ creates a potential back door into the LAN, don't leave stuff there if you don't know how to safeguard. It drops the networks pants.

I'm still hoping for a web browser based solution (watching, hearing, not controlling). We'll see.

From: Rick Bates
Topic: 1949 Message: 1960

Chris,

Unfortunate. Are you sure? My Amped router NAT handles DMZ perfectly. So did my former Cisco.

Port forwarding first, connected packets to the appropriate computer, then punt everything else into the DMZ.

I dumped the Cisco, the hardware was prone to failure. But only when I was 1,000 miles from home. ☐

So I have tried forwarding port 80, 8080, 7234, 50536, 554, to no avail. Again I can get the control piece up and can see the channels, but no audio. Same RTSP error as before.

If you are getting a RTSP error, try closing SIREN and re-open it. I don't mean just minimize it - I mean double-click the home button and swipe it up to close it.

Did you reboot the router after creating the forwarding? Not all routers apply immediately (Cisco).

We may have to hear from Uniden to know which ports are correct for creating the rtsp link.

Rick Agreed! What about using a raspberry Pi for the restreamer? I would assume that would work and take up valuable space on the bench. At least that's my thought. I can't say I totally follow along on that aspect as I have never messed with it, but I do like and understand the concept.

Thanks,
Chris Moore

I hit the same wall (turned off the iOS wifi to force an outside network) but figured the DMZ idea would fix it until we get more info.

I can't change the DMZ without breaking my servers.

Chris,

The Pi should work, it isn't CPU intensive, but storage space becomes the issue (for libs, software and OS, usually trimmed WAY down). I'd check around to compare what might fit. I'm not a fan of CF or SD cards for storage, they have limited write cycles, far less than SSD. Murphy lives.

I already have Debian running services so that's what I'll use to re-stream. That box is totally solid state (SSD) no moving parts to wear and draws about 12 watts of 12V. No fan, no noise, barely warm. It cost me ~$500 to build. It's slightly larger than the size of the 536 (or GM300 if you know that radio).

It evens runs 'ok' on Windows but is wimpy on that bloat.

Power use is a consideration as I convert the shack to battery. Only the monitors and amp will be offline in a power outage but I can still remotely run the station. ☐ I like toys.

I am in the same boat. To me it is simply not a viable option. Hopefully progress will be made quick now that the app is out. I still like your idea of re-streaming and still being able to maintain remote control over the scanner.

@Joe, yes I have tried closing the app. I have no issues using Siren on the LAN. It is the WAN side of things that is the issue.
Rick, I did reboot. I am using a Cisco Meraki Firewall. You can read over this and see if I am missing something. It looks like to me you still have to port forward. Not a true DMZ in my opinion.

I changed your password to the phone number you entered when you registered (no hyphens). But, as mentioned, there is no need nor reason to register the scanner at this time. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Teamviewer shouldn't be over looked. I get my scanner audio anywhere and I'm using the RH536 software for control and display

Chris,

There should be no reason to require a VLAN. You should be able to simply put the scanner IP address in as the DMZ. In fact, you do NOT want separation like this article is suggesting because you wouldn't be able to hear the scanner from the other VLAN (the rest of your house), something you WANT to do.

Rick, WA6NHC

iPad = small keypad = typos = sorry ;-)

Ill look into this further but from talking with Meraki today this is simply how they currently achieve a DMZ zone.

1975. WiFi using Access Point

Yahoo group: BCD536HP
Date: 2015-03-22 22:55:56 UTC
From: N1CHU
Topic: 1975 Message: 1975

Report of oddity using WiFi...

I have my 536 installed in my truck along with an IPad mini, primarily just for a larger display readout. But It will do as advertised when using WiFi, access point. Until today that is... For some unknown reason the 536 would not produce an IP address. It read 0.0.0.0

Realizing the issue was with the radio, and not the iPad I concentrated my efforts towards restoring the radio's WiFi capabilities. To this end, I repeatedly tried to rewrite the IP address by changing to open security and back again, or just going through the acceptance of each step, progressing towards the wait period at the end, each time turning off the radio, thinking it might need to see a soft reset of sorts after setting changes. Then I would check the IP address... Still 0.0.0.0.
Then, without any input on my part, 192.168.1.1 appeared. Now before someone says I didn't wait long enough, I waited at least 4 times longer each time I tried changing something than it took before. And it hasn't done it again... Yet. I can't explain it. I am wondering if anyone else has had this occur?

Bill

1976. Owners of newly purchased (past 3-6 months) 536 scanner question

Yahoo group: BCD536HP
Date: 2015-03-23 11:35:35 UTC
From: xtraham@...
Topic: 1976 Message: 1976

It's no secret that the first produced 536's had some production issues. I've been sitting on the sidelines waiting to purchase a 536 because of those issues. New owners (past 3-6 months)... have the radio's issues been cleared up, and is the 536 now a "non-issue" piece of equipment, or are there still hardware (not software) issues popping up?
Thanks.
Scott

From: Rick WA6NHC
Topic: 1976 Message: 1977

Scott,

I bought a 536 late last summer. I liked it well enough that I also bought the '436, the next week. Other than the dongle issue, since resolved and the wait for Siren, it is a work still in progress*, it has been faithfully running nearly non-stop. The 536 is augmenting my ancient analog only scanner downstairs (now I don't have to blast either but can have each at reasonable levels). The 436 travels with me on short trips (else I'll put the 536 in the RV and use Siren from the cab). I do not have the RTC/battery issue, that appears to be a very small percentage.

I would say fear not, be comfortable enough to buy in. There are many more happy users than what you'll see on any email list or blog. Lists like this tend to focus on problems since the rest are happily listening away...

* I say a work in progress because more scanner firmware is coming out adding the promised features not currently available. And because Siren is lacking on on some finer details as well. With a limited budget and programming staff, this takes time, but what has been released shows great promise of things to come. A few more user features on the Siren app (and/or vast improvements on the utility for PC control) plus a couple new things to add to Sentinel (print out what's on a list; search for a given frequency) and we'll all be in great (listening) shape.

1978. Re: [BCD536HP] Owners of newly purchased (past 3-6 months) 536 scanner question

Yahoo group: BCD536HP
Date: 2015-03-23 19:57:01 UTC
From: N1CHU
Topic: 1976 Message: 1978

Scott,

This is my take on these products;

I purchased 2 BCD536HP's and 1 BCD436HP a year ago. I saw only two issues with the radios, the causes have been identified and are in the process of being rectified... Namely the clock battery issue and the Siren App issue. Where the clock battery is concerned it looks like Uniden was not expecting it as it is using proven technology in previous radios but found the cause to be faulty component(s). A process for customer satisfaction, correcting the radio, is being formulated. The Siren App issue was known when the BCD536HP was released but originally expected to be available by the end of the first quarter of 2014. But Uniden had "unforeseen" concerns. The App and/or WiFi dongle firmware kept missing Uniden's expectations. But just recently Uniden released the Siren App. It's not completely finished but as time goes on Uniden has promised to complete all promised functions. The analyzer function included.

I wasn't happy about having to wait a year (my faith was shaken) for the primary reason I made my purchases, but true to their word, Uniden is coming through with all that was promised, restoring my faith.

There may have been other issues and I will stand to be corrected on all I wrote here, but as far as serious problems? I only regarded the two as serious, and no longer consider them serious because the causes have been identified. And can be and will be corrected.

Hope this helps,

Bill

Twiki/update info are at..
http://info.uniden.com/twiki/bin/view/UnidenMan4/BCD536HP

Note the free sentinalsoftware updates the radio firmware and weekly database.
Follow the instructions closely as the WiFi dongle may need special instructions BEFORE updating the radio!

The way you asked, the question, the answer is: Nothing.

The 996P2 is basically a BCD996XT with P25 Phase II added, and the front connecter changed to a Mini USB. That's the P2 in a nutshell.

Well, I guess you could call the Backlight alert light one thing
that the 536 does not do, as it is a separate light on the 536.

LOL you should work in politics :)

Ok, thanks - I was basically trying to figure out if there was some big advantage over the 536 .. And curious why there was no announcement here or anything (that I saw!)

Funny it uses (it looks like) the old Uniden Director software and not Sentinel?

Wow. What did I do to deserve that dig? :-)

There is also a BCD325P2 coming out which is basically a BCD396XT in a BC125AT case that also has P2 and a USB connector. No alert light on that model.

Also, they both use Freescan, Proscan, or ARC-XT. There was no UASD released for the XT series scanners. No - definitely not Sentinel.

Oh wow. Never used any of those 3 . Used Sentinal and Director. I'm
suggesting my friend try to get the 536 if he can :)

So you want to assign different IP addresses to each radio to do what? Have 3 different Siren Apps running on your iPhone at the same time? Or 3 different iPhones/iPads listening to 3 different radios?

Ok... Maybe you can get away with two different IP addresses... Using your LAN for one (infrastructure) and the other on the radio's dongle (access point)?

But I don't think there is a way (at least not yet) to manually change the radio's automatically assigned IP addresses.

And, I could be wrong...

Caveat: I have not tried this, and am traveling so cannot attempt until next week (but someone will surely beat me to it).
You might try running only one of the scanners in AP mode and the others in Infrastructure mode connected to the first scanner's access point. UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Scott,

If I might make a suggestion...

(If in a vehicle, put a router in your car too, basically as a WiFi switch. Then...)

Put each of the scanners on the network. Have the router assign each scanner MAC address the same IP address each time it logs in. That keeps scanner A /always /192.168.xxx.yyy etc. (add comments in the router for you later, "Cops", "Fire", "Medic", whatever makes sense to you). Make note the address(es) that are assigned to each scanner so ...

In Siren, since you know what each address for any of the scanners will always be, so you know which scanner you are listening to at any given moment. That address never changes (.010 is cops, .020 is fire etc.).

If you're a glutton for punishment, listen to scanner A on iPhone, scanner B on iPad, scanner C on Android/PC via VLC at the same time. ;-D [run screaming from the room...]

Otherwise, if you use AP mode, you never 'know' which scanner is in play if your memory clouds (happens). Each will conflict until such time that the AP IP address is changed.

This very simple setup will make your organizing MUCH simpler in the long run. Bonus: being attached to the LAN very likely will extend your listening range since many routers have (real) external antennas (higher gain, extended range).

I routinely have 20+ 'things' on my home LAN (computers, Dish receivers, Blu-Ray players, VoIP phone, tablets, phones, printers...), I do this for each one and there is never a conflict from accidental reassignment of an IP address (router belch). (When that happens, pretty much everything has to be rebooted.)

If you really want to be cute about it, if your router allows it (some won't) assign each known device (per above) to an address NOT in the DHCP range (but within the same block; have DHCP assign .100 through .200, but assign routine, always there devices to .10-.99). That means that your known devices won't interfere with the DHCP range for visiting devices, plus you can quickly see who is on the network that is visiting (or hacked in) by looking at the router to see what assignments have been made and are current.

Again, a little forethought makes things easier in the long run.

Hi UpMan,

An interesting idea but I'm not sure that would work unless the AP scanner can provide full DHCP service, assigning IP addresses to all connections. Without DHCP service, the AP mode is basically an ad-hoc network, one to one.

You'd also have to physically check each scanner for it's assigned IP address (each time) before being able to listen or control remotely. A cheap WiFi router (available on ebay or Amazon for the cost of a fast food meal) would be simpler.

I haven't used AP mode much and only have the one 536 (for now).

Rick, WA6NHC

With proper placement of the WiFi dongle (in the clear and away from walls and metal) and assuming both are running enough RF (kinda doubtful it's full legal allowed on a USB power budget for the 536), the scanner vs cheap router should have about the same coverage area. Because of the 536 USB power budget and typical placement of router AND scanner (rarely optimal for WiFi coverage), I'd presume an edge goes to the router.

The dongle is also limited to the 2.4 GHz band resulting in lower connection speeds and shorter range, compared to the 5 GHz band (wider channels, faster throughput, saturates better through walls etc.). Again that is a power consideration plus a cost consideration. While simultaneous dual band would be sweet, it's overkill for the 536 and likely triple the dongle cost. It's quite capable to do what it was intended to do, move low bandwidth data streams while keeping the costs down, I'm not taking shots at it.

My current router (Amped, dual band) has 5 dbd gain antennas and DOES run the max allowed power so it covers from property line to property line (not a huge lot) quite easily (or I can swap out for directional 'beam' or corner reflector antennas, but its cheaper to buy a range extender). The 536 was not intended to have a city block WiFi range, but 30-50 feet would be reasonable, to get to the listener or router.

But this is drifting far off topic so let's reign it in... before the admins spank us. ;o)

Rick, WA6NHC

Sidebar;

My buddy, thinking out loud, comments "Jeeze, the product isn't fully shaken out yet... More refinements to come from Uniden, (meaning Uniden's work is a work-in-progress) and already everyone is exploring the possibilities!" Which I took to mean "Why doesn't everybody wait for Uniden to finalize the product before "Beta Testing" it?"

A legitimate observation, but I for one (and I'm sure I'm not alone) am thankful for this groups endeavors. Now that Uniden has released the Siren App we can have a dialogue about the many capabilities available at this stage of the development game. It's certainly better than waiting for Uniden to totally perfect the WiFi before making it available! Thank you Uniden.

I run mine in my truck in AP mode (simply to be able to avail myself of a larger display screen) and, aside from the one glitch where the radio refused to assign an IP address, (kept showing 0.0.0.0 which finally stopped happening-don't know why it happened or what I did to stop it) the WiFi has performed quite nicely. If there is one thing I'd like to change it would be the size of the characters, make them bigger on my iPad mini, keeping that beautifully impressive multi color display.

Bill

In Siren, since you know what each address for any of the scanners will always be, so you know which scanner you are listening to at any given moment. That address never changes (.010 is cops, .020 is fire etc.).

If you're a glutton for punishment, listen to scanner A on iPhone, scanner B on iPad, scanner C on Android/PC via VLC at the same time. ;-D [run screaming from the room...]

Otherwise, if you use AP mode, you never 'know' which scanner is in play if your memory clouds (happens). Each will conflict until such time that the AP IP address is changed.

This very simple setup will make your organizing MUCH simpler in the long run. Bonus: being attached to the LAN very likely will extend your listening range since many routers have (real) external antennas (higher gain, extended range).

I routinely have 20+ 'things' on my home LAN (computers, Dish receivers, Blu-Ray players, VoIP phone, tablets, phones, printers...), I do this for each one and there is never a conflict from accidental reassignment of an IP address (router belch). (When that happens, pretty much everything has to be rebooted.)

If you really want to be cute about it, if your router allows it (some won't) assign each known device (per above) to an address NOT in the DHCP range (but within the same block; have DHCP assign .100 through .200, but assign routine, always there devices to .10-.99). That means that your known devices won't interfere with the DHCP range for visiting devices, plus you can quickly see who is on the network that is visiting (or hacked in) by looking at the router to see what assignments have been made and are current.

Again, a little forethought makes things easier in the long run.

73,
Rick wa6nhc

> At this point, I wish to have all 3 scanners on simultaneously and I wish to be able to select at least one of them to listen through the Siren app. If I have more than 1 scanner on at any given time, the scanners often randomly turn off and then on to reload the databases and resume normal operation. I have all 3 scanners in AP mode with the ultimate goal of selecting any one of the 3 536s to listen through the Siren app. As of right now, I'm very impressed with both the 536 scanner and the continuing development of the Siren software and firmware updates!

Subject: Re: [BCD536HP] "Advance" Swap should be implemented for 536 warranty issues

Not sure if that made it through, but here's an actual pic of my car

http://www.espphotography.com/carsetup.jpg

You can see how you can't access the screws on the 536 :(

On Mon, Mar 16, 2015 at 4:07 PM, Evan Platt <evan@espphotography.com> wrote:
Well I wish it were that simple..

Not sure if this photo will make it - not my car but same model

The Bezel goes around the stock stereo and the scanner. I can't access the screws (scanner is actually scdrewed in) without taking out the bezel. Taking the bezel out requires a few tabs, and then a bunch of things disconnected - the AC controls, the hazard light control, etc.

On Mon, Mar 16, 2015 at 2:31 PM, Jeff Dale jeff.dale@gmail.com [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

IF they mounted it properly you should be able to remove it quickly yourself.

If you notice on both sides of the radio there are 2 slots about 1/2" in size. These are used to remove the radio or in this case scanner from the internal sleeve.

Your installer should have left you with the removal tool. It's a small piece of metal about 6" Long.

You would simple insert these in both sides and pull the scanner out.

On Mon, Mar 16, 2015 at 2:29 PM, Evan Platt evan@espphotography.com [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I just sent my 436 for repair for the clock battery issue, and now it seems my 536 is seeing the same issue. I have my 536 on at LEAST 4 hours a day - reason I can say at least 4:
I have it wired to my igniton off of a second battery, so it's on when my car starts. It's running off a secondary battery which is on a timer, and when I turn my ignition off, it runs for an additional hour and a half. So my commute is 45 minutes on a good day, 1 hour normally. So figure minimum 2 hours in the morning and 2 hours at night. And now it's started with the "Set Clock" in the morning. I got home Friday night around 8 PM, and Saturday morning at 7 AM, it already said set clock.

So here's the problem: I'm not an installer, and the 536 is mounted in the dash - installer did a real nice job. It's right below the FM radio. So I'm going to have to go to a shop to have it pulled out. If I can go there once and just have them pull out the radio then swap in a replacement, I'm only charged labor once. Otherwise, if I have to go, have them pull the radio out, ship the radio to Uniden, then wait till I get it back and go back to the shop, I'm charged labor twice. So I'm wondering if they can send me a refurbished unit with the fix, and I send my 536 back once I get the replacement?

I'd say that's only fair and should be an option.

Well that's good to hear. I've got 2 BCD536HP boxes packed away but now I'm going to check them to see if I've got those slot Keyes. I honestly don't remember as I was using a commercial center console which has its own mounting system so I didn't pay attention to all the stuff that shipped with the radio and had to do with vehicle mounting. Another post said no, in order to get the keys you need to order the optional DIN sleeve, which makes sense, if you don't have the DIN sleeve you don't need the keys.

But now I've got to look and see if I got them with the radio...

2005. Wi-Fi won't work

Yahoo group: BCD536HP
Date: 2015-03-27 01:15:28 UTC
From: Alan H.
Topic: 2005 Message: 2005

I have reviewed as many topics as I can find but still cant get an answer. Sam at Uniden sent me a replacement Dongle and now, according to my 536HP, my wi-fi is working. I have it set to Infrastructure Mode. According to the scanner wi-fi connection info, it is connected to my wireless router. The scanner shows it's IP address to be 192.168.1.1, which is the same as my router's. (I do realize that won't cause a problem). So, I put rtsp://192.168.1.1/au:scanner.au in VLC and get the error msg that has been mention numerous times. I have even tried pinging my scanner and it times out. again, the scanner says it is connected to my network.

I have read the posts but still can't find my solution

What version of firmware is the dongle? It should not have an IP of 192.168.1.1 - are you SURE it's in Infrastructure mode? It sounds like it's in Access Point mode. Maybe check local WiFi and see if it shows up as a network of its own...

"Don't
recall a timeframe"

I doubt we will get an expected release date... Considering how many times the issue got pushed back on the current release. Understandable, Uniden was burned on their expected projections. But that's not to say we will hear nothing... My guess is we will get progress reports, like Upman has stated when there is something substantive to report, he would tell us. Until then it's "Is it soup yet?, No. I'll let ya know when it is".

Noted that the original poster mentioned the trailing portion of the URL as:

au (:) scanner (:) au

The proper setting as mentioned by someone else is:

au (:) scanner (.)au

So only a colon character after the initial au, then it’s scanner <period> au.

2019. WiFi Connection Error

Yahoo group: BCD536HP
Date: 2015-03-28 17:57:50 UTC
From: xtraham@...
Topic: 2019 Message: 2019

I successfully updated the firmware in the scanner and wifi dongle. I have also updated Sentinel successfully. Dongle now shows Version 7.28, Sentinel is Version 1.03.01.

I tried setting up the WiFi via Infrastructure Mode. My network shows up, but when I enter the network password, I get a "Connecting Error" message. I've re-entered the password several times, turned the scanner off and on, still no joy.

I know the password is correct, as it's the same passwords used for all my other devices in the house.

Any ideas?

Try cycling the power on the scanner, or try unplugging the dongle then plug it back in. (basically anything to reset the WiFi connection)

Still no joy on WiFi connection. Here's what I've tried so far..
• Rebooted router
• Disconnected amp from router and ran internet straight to router
• Rebooted router again
• Password has one "C" in it, tried a lowercase "c"
• Turned scanner off/on multiple times
• Unplugged wifi dongle, rebooted scanner, turned scanner off, reconnected dongle, rebooted scanner
• Moved dongle up, down, sideways

I still get a message "Connection Error"

I also tried to go online and get a phone number off the Uniden website for tech support. That's a joke, the "Contact Us/Phone" page doesn't load in any browser I tried.

Any ideas would be appreciated. Maybe Upman will see this and have an idea. Otherwise, I paid a lot of money for a product that does not work as advertised.

Dongle Rev. 7.28, Sentinel Rev, 1.03.01

Thanks.

Scott

Still no joy on WiFi connection. Here's what I've tried so far..

• Rebooted router
• Disconnected amp from router and ran internet straight to router
• Rebooted router again
• Password has one "C" in it, tried a lowercase "c"
• Turned scanner off/on multiple times
• Unplugged wifi dongle, rebooted scanner, turned scanner off, reconnected dongle, rebooted scanner
• Moved dongle up, down, sideways

I still get a message "Connection Error"

I also tried to go online and get a phone number off the Uniden website for tech support. That's a joke, the "Contact Us/Phone" page doesn't load in any browser I tried.

Any ideas would be appreciated. Maybe Upman will see this and have an idea. Otherwise, I paid a lot of money for a product that does not work as advertised.

Dongle Rev. 7.28, Sentinel Rev, 1.03.01

Thanks.

Scott

Hi Joe, I'll answer as best I can.

I'm using "Infrastructure" mode, not Access. I thought because I was trying to get on my existing network, "Infrastructure" was the correct mode.

The network does have WEP on it, but again, I have accessed the network with other devices (iPads, iPhones, laptops (both Mac and the dark side :-))

The DHCP question I can't answer, but again, other devices are accessing the router.

Thanks to all who have responded. Hopefully the mystery can be solved.

Infrastructure is the correct mode. But, in that mode your scanner
connects TO an access point (as opposed to being an access point).

I don't think WEP is supported. I think that may be the issue.

WPA is more secure, and is supported by the dongle.

2033. Siren App Question

Yahoo group: BCD536HP
Date: 2015-03-31 14:37:34 UTC
From: xtraham@...
Topic: 2033 Message: 2033

I'm slowly getting my scanner up to speed, now on to the Siren app. So here goes with a real rookie question. Currently, I'm using "Infrastructure mode" at home, and the scanner has connected to my router.

IF I want to listen to the scanner via the Siren app, do I have to go in a switch over to "Access Point" mode before I can use Siren away from home?

If true, then you have to switch back and forth between infrastructure and access, correct?

Thanks.

Scott

2034. Re: Siren App Question

Yahoo group: BCD536HP

From: bob.peloquin@...
Topic: 2033 Message: 2034

To listen to the scanner mounted IN THE CAR with your mobile device via WiFi while a short distance away from the car, use Access Point mode.

If you intend to try to listen to your HOME-BASED scanner from outside the home (anywhere you have a high-speed data connection) then leave it in Infrastructure mode and map the ports through your router.

For listening in the home, leave it in Infrastructure mode and connect through your wireless router.

Yes, you will have to change modes on the scanner and your mobile device to go between Infrastructure and Access Point modes.

Correct me if I'm wrong but I believe WPA2 is the only security option available that hasn't been cracked? Using other so called secure settings or "open" is leaving your LAN susceptible.

I use AP in my pickup truck (I believe I also secured it with the WPA2 setting-I would need to double check.)

I sent accidentally before done... The reason I'm concerned about AP is I use a iPad mini, containing stuff that could set me up for identity theft. Not that it's as severe a risk as my home LAN, but it's scary what can be hacked and cracked. Enough years as a IAM & IAO put me through computer penetration seminars to scare the dickens out of me. Especially when one of the instructors tells us that of all the savings institutions he's attacked (legally) the only bank he could not penetrate
was Bank of America. And then he demonstrated using nothing more than your name and your banks name. Actually transferred $5 out of an account. And did it without leaving a trail to follow! That was about 7 years ago. Hope things have improved since then.

On infrastructure I believe it's whatever security you chose for the LAN. It will ask you for your LAN password... If you chose "open" I don't believe it would ask for a password? Not sure...

Yes, WPA2, no problem. In addition, while you can't have a hidden network to make the initial connection, once the initial connection is made, you can return to hiding your SSID. That's how I did it, and no problems.

You can copy-n-paste into Excel, and either
print from that or use a converter to PDF.

That would work if Sentinel had "Copy". Or "Paste". Or if control C or control V worked. But they don't. At least not in my version.

2052. Safe Signal Level Limit?

Yahoo group: BCD536HP

From: n7xsq@...
Topic: 2052 Message: 2052

UPMan, can you provide a spec, or at least some guidance, on what I should consider a safe signal level limit for my shiny new BCD-536HP. I am not talking about overload or desense levels, but rather a limit for preventing damage to the front end.

I am also a ham, and I don't want to blow up my new scanner when I am operating. I have a nice HCF power meter that will cover -60dBm to +40dBm (with attenuators), and I want to measure what is coming down from the scanner antenna when I am transmitting, but I need to know what I should use for a limit.

If frequency is a factor in the limit, I can transmit on the HF, 2 meters, 220, 70 cm and 1.2 gHz bands.

If it's any help I run an Icom 2820 DStar, a 220MHz and a 6 meter rig in my truck. Along with the 536. The scanner antenna is on the right side of the engine hood. The 6 meter antenna is on the left of the hood. The DStar 2 meters and 440MHz dual band is on the Back Rack out to the edge of the pickup truck bed behind the cab. It's a standard cab without the extra half door or crew cab. And the 220MHz antenna is opposite on the other side on the Back Rack. Total distance between the scanner antenna is the width of the engine hood on 6 meters, about 10 feet for the dual band DStar and about 12 feet for the 220MHz. No doubt there is some level of decensing going on when transmitting, maybe some overloading, but it hasn't affected the scanner by damaging it. At least not yet.

I too had this concern, as it relates to mobile installations, placing my scanner antenna in very close proximity with transmitting antennas but was reassured by what has come to be an accepted mobile installation practice over the years without any reports that I can recall of damage to the scanner. (I am assuming the transmitter power is not boosted over that which is advertised.) If ARES response vehicles can run all sorts of ham equipment, and a scanner or two without issue, and first responder CP vehicles also do the same with high powered mobile VHF, UHF, UUHF etc, the scanner people knew up front that there better be a reasonable level of protection built into their scanners for just such applications. I don't have a problem with my scanner being less sensitive or selective (always get those two mixed up) when I'm transmitting on any ham band... It can dummy down and hear nothing while I'm transmitting. I don't care. Just as long as I don't cause damage.

But I did keep in mind the separation between the scanner antenna and the transmitting antennas should be as far away from each other as reasonably possible on my pickup truck when I did my install.

Bill

That's a pretty good setup. I would not want to see a transmitting antenna within about a wavelength (TX freq) of the scanner antenna.

The scanner antenna will also affect the coupling if it's tuned to the same band or a different band, and if the same style the coupling will be even greater.

I routinely run 50 watts on 2M (APRS and voice) and 40 watts on 440 (dual band antenna) 3-5' from the scanner antenna (depends on which vehicle), 6 meters is across the cab on the truck, HF (80-10) is a few feet away. So far no issues. In fact it's convenient, since the overload effectively shuts the scanner audio off acting like a mute switch. :o)

Rick,

Agreed... The ham buddies always commented about background audio (and still do) when another of my 4 radios including the scanner was heard on my xmits. That's what I meant by my "I don't care" comment if the scanner got quiet when I transmit. I forgot to explain why I didn't care in my post. Thanks for taking it forward for me.

Thanks guys.

I have a desktop scanner antenna on top of a tall rack cabinet, which effectively makes a little discone of it. It is right under the ceiling. The TX antenna is an Arrow dual band ground plane about 2 feet above my flat roof and about 15 or 20 feet away. I'm using 5 & 20 w on 2m & 70 cm.

2059. Traveling with BCD536HP vs BCD436HP

Yahoo group: BCD536HP
Date: 2015-04-05 20:09:38 UTC
From: jeff.hochberg@...
Topic: 2059 Message: 2059

Hi everyone!

Last week, I purchased a BCD436HP handheld scanner and I really like it. The biggest downside to the unit is the curved piece of plastic that covers the LCD display. So long as the backlight is turned on, the screen is very readable. But without the backlight, while not impossible, it is still very difficult to read.

I'm starting to wonder whether or not I should return the BCD436HP and buy the BCD536HP. From what I can see, despite the 536 being a base unit, it doesn't appear to be very big. With the AC power cord and a nice portable antenna, I think the 536 could be a viable option for using while I am traveling.

The 436 is ideal in that I can just throw it in a bag and don't have to worry about being next to an AC outlet all the time. But while I am still within the return period, I am wondering if it makes sense to exchange the devices and go with the 536.

On the other hand, I was also thinking that I keep the 436 for now and purchase the new BCD996P2 base unit in a few months.

Decisions, decisions!!! :-)

Any relevant commentary welcomed!

Depending on how you want to use the scanner, weight may be an issue. But if you only intend on setting up a monitoring station once you get where you are going then putting 536 in your travel bag isn't unheard of. I just got back from Daytona Beach Bike Week where I packed a 536 in my bag and had the 436 in the truck cab along with another 536 permanently installed in the cab. I also have a small field pack (It looks like a field pack) that is an aftermarket item for portable radio use. A lithium Ion rechargeable dry cell motorcycle battery which weighs less than the 536 powers the 536. Slap on an antenna and you've got a pack radio! But as for being better able to see the display? It's not a very viable option. Get some good rechargeable batteries, carry a spare set with you and enjoy the handheld portability of the 436 unless you also have another reason for considering a 536 like a need for additional volume or a display light that needs to be kept on continuously.

There have been complaints on the BCD996XT P2.
It doesn't work too well on a P25 system here in South Florida.

2063. Re: Siren App Question

Yahoo group: BCD536HP
Date: 2015-04-07 22:10:18 UTC
From: john_gianotti@...
Topic: 2033 Message: 2063

Is there a YouTube video that explains how to connect via the Infrastructure mode? I have mine connected but want to listen to the scanner from outside the house. Nowhere in the scanner menus can I find out how to select a port to which I can forward!

2064. Re: Siren App Question

From: N1CHU
Topic: 2033 Message: 2064

On the radio press the menu button... Scroll down to WiFi Setup... Hit Enter... Scroll to Set Connection... Hit Enter... Select infrastructure mode... Hit Enter... Select your router's IP address... Hit enter... I put your router's password... Hit enter. Allow the scanner to connect. Back out of the menu to Show Wi-Fi Information... Hit enter. You will see the IP address listed. Remember it. Back out of the menu entirely. On your iPhone/iPad go into settings and click on Wi-Fi... It should recognize your router, make it the chosen choice. Back out of settings and open the siren app. Go to settings and then Connection. Enter the IP address you remembered and hit accept. With the radio scanning, the siren app should start to play for you. Give it a few seconds to catch on. If it doesn't, go back into the Settings, Connection, double check the IP address of the router, click Accept again and back out. It should play.

Hope this helps,

Bill

At present, it's not possible. It may become possible in future firmware updates but nobody except Uniden knows for sure. Right now, in infrastructure mode, you can only listen when connected to the same intranet as your scanner. Once the firmware is updated to allow unicast or multicast packets to be routed through your router to the Internet, you may be able to do it. But right now - not so much.

2067. Sentinel New Feature Wants

Yahoo group: BCD536HP
Date: 2015-04-08 22:03:48 UTC
From: Rick WA6NHC
Topic: 2067 Message: 2067

I would like to see the following features added into Sentinel (not in priority order):

* Printing of favorite list(s) directly to a printer or PDF generator

* Search features within the database; (Is this freq stored now in faves? who's there on THIS frequency?)

* A synopsis of what is changed when the RR database is uploaded (does it affect anything I'm hearing?)

* Automatic checks for updates, both database and firmware (keep most current stored); click to download update(s)

* Posting of 'news' from within Sentinel in case it was missed on email (stuff happens)

* When an update happens in the database, automatically (user optionally) put it into the affected favorites list(s); then say what was done so it may be massaged if needed (new cops, but I don't want cops in the FD list; related to the above want)

Thank you,
Rick wa6nhc

2068. Re: [BCD536HP] Re: Siren App Question

Yahoo group: BCD536HP

From: xtraham@...
Topic: 2033 Message: 2068

Thanks Bob. That clears up a lot of my frustration in trying to get the app to work outside my home network. It's not me (us), it's the app.

2069. Re: Sentinel New Feature Wants

Yahoo group: BCD536HP
Date: 2015-04-09 00:49:36 UTC
From: Bob Peloquin
Topic: 2067 Message: 2069

Rick wa6nhc asked:

* Printing of favorite list(s) directly to a printer or PDF generator

Not possible due to license restrictions with RadioReference.com. The data contained in the list, while user-contributed by members and guests at RadioReference.com, is technically OWNED by RadioReference.com and they don't want software to be able to export it or easily print it out to protect their intellectual property rights.

* Search features within the database; (Is this freq stored now in faves? who's there on THIS frequency?)

Sounds like a nice feature. RadioReference.com already has this though so why put it into Sentinel?.

* A synopsis of what is changed when the RR database is uploaded (does it affect anything I'm hearing?)

Might give you hundreds if not thousands of information hits... See the colored map at RadioReference.com which indicates recent changes.

* Automatic checks for updates, both database and firmware (keep most current stored); click to download update(s)

That would certainly be something to think about. I hope it comes about someday.

* Posting of 'news' from within Sentinel in case it was missed on email (stuff happens)

Hmmmm.... Dunno what forum posts have to do with Sentinel but if you want it I guess it's something worth asking for.

* When an update happens in the database, automatically (user optionally) put it into the affected favorites list(s); then say what was done so it may be massaged if needed (new cops, but I don't want cops in the FD list; related to the above want)

Well, Rick, the problem with that is that Favorites Lists are often created by users from data which does not necessarily reside in the master database. There's no way, programatically, to determine what's changed between a favorites list and the master database since the contents may have no relationship to the database itself. This has been asked for and rejected many times for the same reason.

2070. Re: [BCD536HP] Re: Sentinel New Feature Wants

Yahoo group: BCD536HP
Date: 2015-04-09 03:38:18 UTC
From: Rick WA6NHC
Topic: 2067 Message: 2070

Hi Bob,

While we can discuss the wisdom or fairness to the Uniden end user of licensing restricting printing out the user's data which can also be printed from RR, let's do that another time. [Yes, I've done that printing numerous times in the past before I came back to Uniden, to manually program other brands.] That discussion would invite excessive commentary. Suffice it to say that I was talking specifically about Favorite lists, which while trade-able via email etc. are generally a private matter. It would mainly be a convenience to me only when programming my ancient (Pro-2004, circa 1990) scanner or those of others around me. Less tedious at least (I often get requests for that when fire season starts).

* The frequency user (and user license) searching on RR is only available to PAYING users (I'm a ham, I'm cheap on some things). This feels a lot like duplicated payment since one of the features of the Uniden line when you buy a current scanner is direct and complete RR database access (so I guess I'm not seeing much distinction between public RR and the private Sentinel downloads, since it feels like part of the scanner package pricing). Searching is also not possible if no Internet is available (places like that thankfully still exist, I'm there often). That data is available from the Sentinel database, already installed on the computer (hopefully updated before entering BFE) so a search would/could be useful without hurting the RR income.

Heck it would really be awesome if while during a band search, the scanner itself could search the database and tell you what you just found (not expecting it, ever, on current models; the CPU load would melt the batteries).

It's simply more convenient for the Sentinel user, which I hope we all want, to have data and search available at one source, Sentinel. That the RR annual fee doesn't cost much is not the point, that is semantics; the licensing agreement allowed an advertised feature from Uniden to have the database, with updates, searching should be part of that access. [And for what it's worth, I've happily contributed over the years too, with no recompense expected; information has been a two way street.]

* Any Sentinel database update notations should be controlled by user options (i.e. off, ALL or just what affects my favorite lists). That's just software feature management. It is tedious for the user to be expected to track weekly changes on RR to find out if any affect your specific area of concern (the Favorite lists) when the data is already available during a download. It's simpler just to do the Sentinel

database update, then it tells you what affects you, even updating the Favorite lists. Update notes alone (a pop up? <gag>) would make it simpler for the user to know if/when changes are required at the most basic level.

* Automating the updates (a background service [PLEASE NO!!!] or on program startup) would seem to be a trivial addition to Sentinel. Again, make it a user option and FULLY in the background so the user interaction isn't delayed.

* I didn't say Forum notes, I said News in case one does not get (ever or missed) the [high noise level] forums often or ever or email list (here) info. Something as simple as "New Firmware available"; "Program Update available"; "Analyze feature now available" or similar. I would hope it wouldn't be used as ad fodder as other companies have done, but that is another corporate thought (product sales, new products, etc).

* Maybe I am in the minority (certainly not the first time). I have created Favorite lists for the areas that I am commonly in, for the services that I want to hear (90% fire, that's my former career). Home Summer Fire (ALL the local fire channels for my county), Winter Fire (trimmed WAY down for noise abatement); local cops/fire in other areas (when I visit the kids) and so on. It's a quick way to focus on my primary interests while keeping ear exposure concise. When I travel, I use the ALL database, GPS and range controlled, for the selected service types (which could use improvement in definition, a discussion for another thread).

So between Favorites and ALL, things are pretty simple to change; just change the Favorite list according to what I'm doing (or time of year). ALL the data in my Favorite lists comes from the database with the sole exception of Ham Radio which is sadly not very complete (admittedly not a great loss, I'm rarely THAT bored and if I want endless chatter I'll add the cop lists). There are other sources (some really awful) for local ham radio repeater info so I pre-program my ham radios or I just put them in scan mode (the proper tool for the job). [It's not an RR issue, some hams systems are highly transient and some seem to think it's proprietary info; dream on.]

So all this explanation gets to why I feel that updates should also automagically update the Favorites lists rather than rebuilding them should something be added or change (even if you're not notified). Maybe I'm the only one that operates this way, I prefer simple to the point of: after initial setup, not having to think about it often so I can concentrate on other things. (As you know, it's simply amazing how static some systems are while other, even mature systems are often dynamic.)

We may not agree on these points since I am merely a user of the data and scanners, and I won't venture into the argument of public information converting to privately owned data (NOT a lawyer) but I thank you for your comments and the opportunity to explain my reasoning. I also applaud the efforts of RR for being THE premiere data

collection source for scanner heads. Very well done!

I forgot one wanted change: * Combine the low level editing panel into the main program more seamlessly. It feels kludgy, incomplete in the current method of adding/editing the raw data. I know, a work in progress but user input should be part of that process. Double clicking a single entry for example, should bring up the editing routine to allow changes.

Later, we can discuss how to translate the manual into common English, primarily WHEN to apply WHAT feature and some HOW-TO examples (with WHY). While I'm conversant in Geek, it's written in Engineer and not as simply phrased as it could be. :o)

Bob, since you are an admin for RR, I'll mention two OT things while I have your attention: MSIE 11.x won't load the maps about half the time (multiple computers), I haven't figured out why (I suspect it's Flash add-on caused) and second, since Flash is used, it means no iOS device will *_/ever/_* see the maps (Apple corporate policy for a push for HTML5 among other reasons). Yes, there are easy work arounds; I'm just passing that along hoping for improvements there on the otherwise excellent RR pages that I've used it for more years than I want to admit. Convert to HTML5?

Best regards and thank you again,
Rick

From: N1CHU
Topic: 2067 Message: 2072

So Rick,

What you are saying basically is you want to turn on your radio, wait for it to find an Internet connection and update what needs updating, print out the found changes and provide options to interact with the process along the way. All automatically after you have entered your preferences. In short, wait a half hour for the boot up process to complete!

Since it's not April 1st, I must assume your post is not an April Fools joke.

A possible solution might be to use the live feeds offered for cell phones. They are routinely updated (assuming the feed provider is doing it weekly in a conscious effort to stay current. :)

The previous was meant in jest, you have some valid upgrades listed. I just couldn't resist! Personally, I haven't wandered through all the many capabilities the radio currently has. In addition to what Uniden has yet to get perfected, the only wish I have is to stuff everything the 436 has into the 396 case form factor. I'm not holding my breath. I think it falls into the same request category as "People in Hell wish for ice water!" Wishing it ain't necessarily gonna get you it!

Bill

2073. Re: [BCD536HP] Re: Sentinel New Feature Wants

From: Rick WA6NHC
Topic: 2067 Message: 2073

While I don't want a half hour boot up nor a weekly reprogramming (I update about monthly, my 536 is in constant use) the point of any user interface is: make the complex, easy. Radio systems are now complex, so the interface must make it simple. Uniden has done a pretty good job of making basic programming simple, regardless of the radio network complexity.

If some things were added to Sentinel, with user control options, it would be simpler yet for the user; goal achieved.

Later, if the scanner CPU has enough oomph, remote updating of the firmware and database (and Faves) would be pretty awesome though. Park a x36 on a hilltop repeater site, remote the audio to multiple listeners... all manageable from home.

So close and yet... :-)

73,
Rick wa6nhc

2074. v1.06.10 Released

Yahoo group: BCD536HP
Date: 2015-04-10 15:05:15 UTC
From: Uniden UPMan
Topic: 2074 Message: 2074

BCD536HP v1.06.10 Revision Notes (4/10/2015) This firmware version includes the following updates, enhancements, and bug fixes:
- Improved scan rate
- Avoided an issue where a packet length of a specific number of bits locked up the USB driver.
- Fixed a issue that blocked updates if the Wi-Fi module is not connected.
- Implemented Analyze modes
- If RTC battery fails, allows user to continue operation using a temporary time setting
- Blanks the clock display if temporary time setting is used.
- Changes the default names for Favorites Lists, Systems, Sites, and Departments to be based on sequential numbering.
- If temporary time setting is used, confirm before proceeding to:
- Recording
- Discovery mode
- WX Alert Mode
- WX Priority On

- If temporary time is used, Weather Alert logs are not deleted after expiration time.
- If temporary time is used, Weather Alert expiration times are not shown.
- If temporary time is used, Weather Alert logs are deleted after power cycle.
- If temporary time is used, change the Set Clock menu operation.
- Improve P25 voice quality
UpManUpMan FAQ: http://info.uniden.com/UnidenMan4/UpMan -- Please read before emailing me directly

Why do we have to use a temporary time setting due to a failed part on the scanner? Why not replace peoples scanner. I am not sure how much the time matters. I would think for GPS it would matter but perhaps I am wrong. I feel like I am getting burned for spending good money on a scanner that has had various issues since purchase. What I really think is we all paid $600 to be a beta tester!

Chris

Maybe Uniden is still working on the exact issue, and this is a fix to solve the issue of having to set the time each time you power up the scanner. It has no bearing on GPS operation. As for testing, maybe you could explain how a few months worth of testing (maybe less) could catch an issue that takes the better part of a year to show up, and even then only in a small percentage of units.

I for one am glad Uniden has released a patch rather than make everyone wait for a permanent fix (all the while being flamed even more for "ignoring the problem"). In fact, they have done that several times this year alone - released things early just to get a taste into the hands of the customers.

I somehow doubt they'd replace the scanner. Replace the part, yes.

But good question, the time is actually part of the GPS feed, so with GPS, there's no need for a RTC.

Paul, is it possible or in the works that if there's a GPS connected, there's no need for the RTC?

Chillax dude. Wah!

As posted earlier, it's a work around until the RTC issue (not even affecting 5% of the current users) can be fully resolved. Be pleased they're reacting to an issue of the minority instead of saying suck it up.

Even if the RTC hasn't failed (mine haven't), it asks to set the time. You either reset the time (a bunch of Yes pushes) or press .No to proceed. Not a huge issue except you can't simply turn it on and walk away. Since mine are rarely off, no big deal.

Time is used in creating recording file names. Not a huge loss if incorrect. I don't use the display as a clock, too tiny to see without readers.

But why not check to see if a GPS is connected first and if so grab the current time from the data string with no user interaction? (That could even be faked from a computer via the serial port.) Yes, a GPS is UTC time, so? At least you wouldn't have to reset it twice a year :-)

Now to see if they release an update to the remote utility program (NOT just Siren) to take advantage of the changes. It's not a stable product, was never intended for public use but is an interesting utility. Hint: add an audio feed to it and it'd be 80% there for most users. For bonus points, add a restreamer for data/audio for multiple listeners.

Uniden is not MicroSloth, they don't have a buhzillion programming groups. Think smaller programming house, they do the hardware too which diverts focus.

436 firmware soon please?

73,
Rick wa6nhc

Quite frankly I am fine with them fixing the scanner. I just don't think I should have to send it in and wait weeks. Advanced Replacement with a refurbished model would be fine.

I don't think that's something that should be able to be owned / copyrighted. Technically the FCC 'owns' the Data, RR just takes the data and reformats it.

Similar to a phone book - the phone book isn't copyrighted because it's 'data'.

How can the FCC own copyright to data it doesn't maintain?

They may have copyright to THEIR database, in some small sense, as it's public data, but certainly the additional details on RR would not be theirs to claim. For example, the FCC has no idea of trunked channel assignments, TGs, CTCSS/CDCSS/NAC, user DBA (for the most part), channel assignments, channel names, and even service types since the 90s.

Joe,

It's not "maybe"... Uniden is in fact looking for a permanent correction. This is according to Upman's last two or three posts on the subject. The first eluded to Uniden creating a process whereby owners of scanners with the problem could send them in for repair. But then Uniden changed their mind. After they learned the fix might require more than first expected. So in order to examine the cause further they needed more time. And then offered up the workaround firmware, the mention of which we see in this thread. In short, Uniden is buying more time to complete the fix by giving users (experiencing the problem) a way around it until the real fix is identified. This firmware version is not a "fix", merely an attempt to stop the bleeding.

I get it. Uniden is embarrassed and has apologized. But the longer it takes (to fix the items promised) the more embarrassment is dumped on them... Adding up exponentially. It's been over a year now on identified problems they knew about before the radio was released, still not fixed. And then this clock thing rears its ugly head! It's got to be awfully quiet in the Uniden scanner department these days!

Bill

Maybe Uniden is still working on the exact issue, and this is a fix to
solve the issue of having to set the time each time you power up the
scanner. It has no bearing on GPS operation. As for testing, maybe you
could explain how a few months worth of testing (maybe less) could catch
an issue that takes the better part of a year to show up, and even then
only in a small percentage of units.

I for one am glad Uniden has released a patch rather than make everyone
wait for a permanent fix (all the while being flamed even more for
"ignoring the problem"). In fact, they have done that several times this
year alone - released things early just to get a taste into the hands of
the customers.

The FCC's files are in the public domain (with the exception of classified assignment of frequencies) so for all practical purposes, and realistically, they are not copyrighted.

Radioreference displays their data, collected from donors and the FCC database. No copyright there. However, I do expect there would be some form of copyright infringement should someone attempt to compete with RR, and exactly duplicate the RR form and function. It's ok to compete with RR but I think there needs to be distinctive, identifiable differences in the way the competition is conducted.

Disclaimer; I am not a lawyer, have no formal training (if you can't count Perry Mason and Matlock reruns). So anything I have posted above could be so wrong it's not funny. I base what I wrote on what I feel should be fairness in business practices. If that's what copyrighting is defined as, I stand corrected.

The 'maybe' was that maybe they are still looking into it as opposed to the alternative that they have identified the cause and have a solution.

I doubt anyone outside Uniden knows the exact status of the investigation.

The symptom is that the battery is not taking a charge. There are a few possible causes I can think of that would result in that symptom. Or, it might be that the batteries are going bad. I would hope the cause is still firmware-based which means the solution would be a firmware update. But, I doubt it will end up being that easy of an issue.

Ok, well, I'm no attorney, but RR is 'modifying' or simply adding data to FCC data, right?

So to make a compariosn.... Again, phone books cannot be copyrighted because it's data (again, my understanding, if I'm wrong, correct me).

So what if I took the phone book data, and added the sex of the person and added whether it was a house, townhouse, apartment, or condo.

Can I then copyright that?

To the best of my knowledge, RadioReference.com DOES NOT and NEVER DID use the FCC data to start their database nor to maintain it. It's supposed to ALL BE USER-CONTRIBUTED and therefor belongs to RadioReference.com since the user contributed data is "given" to RadioReference.com to use as they see fit.

Actually, they are not modding the FCC data at all. Their data comes from user submissions. If anything, the user holds the copyright, but likely RR has a policy that states they are granted the copyright so they can publish the data (ala YouTube or Facebook).

For your example, I'm not a copyright attorney, but I have looked into copyright laws extensively (and found they are largely useless), but if you take existing data and modify it, you MAY be able to copyright the modified data. Again, not an attorney, so I can't say for certain.

I know that in the past I modified the FCC data and sold the resulting work, and I could have filed a copyright on it. There were other companies doing the same thing, and they too held copyrights on their versions. So, I'm fairly sure that your example would be copyrightable as well. I know for certain you can take an existing patent, say for a mouse trap, improve upon the design, and file for a new patent on the improved design and it will hold up.

Good question. But I don't have a problem with compiling any info provided it was all found in the public domain. When the Secretary of the Navy tries to have the Revell Plastic Model people arrested for selling a cutaway model of a Polaris Missle Submarine back when they were the hottest classified item on the books, and learned that all the details shown on the model were readily available in the Library of Congress, I don't put much stock in copyright infringement if anyone can simply get the same info for free legally.

But that's not what this group is about so I'm getting out of this off topic subject.

So what if I took the phone book data, and added the sex of the person and added whether it was a house, townhouse, apartment, or condo.

Can I then copyright that?

There have been local state administrators who have admitted to submitting FCC data. Probably nothing more than due diligence when checking submissions against the FCC database...

On Apr 10, 2015, at 2:27 PM, Bob Peloquin bob.peloquin@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

To the best of my knowledge, RadioReference.com DOES NOT and NEVER DID use the FCC data to start their database nor to maintain it. It's supposed to ALL BE USER-CONTRIBUTED and therefor belongs to RadioReference.com since the user contributed data is "given" to RadioReference.com to use as they see fit.

From: Rick WA6NHC
Topic: 2067 Message: 2092

The FCC has washed it's hands of specific frequency use for commercial systems, only issuing the licenses and defining generic spectrum use. The commercial spectrum use now belongs to the NTIA. The FCC does do enforcement when it receives a complaint (interference) but their budget has reduced them to much less significance than even 20 years ago. The FCC still issues citations, but only enough to show they're still around (no budget, no ticket). Don't be dismayed or fooled, they still have a large hammer, but lack the finances to swing it often.

The actual data use is an interesting legal issue; basically (as I understand it) that even though the data is public domain, the collection and distribution of it can be privatized (making the RR database protected). The only open, public and available resource is the FCC database, but that is a blistering PITA to 'collect the whole set' (NOTHING in the Federal system is EVER simple). So RR steps in to make it simpler; they can copyright it enabling laws to protect and defend RR should it be necessary.

It also enables RR to sell the data in any way they wish (though I doubt it's very profitable, perhaps enough to buy the occasional meal out; the user market is simply too small to make much money). That is why the license to Uniden has been created and sold. [Would it be better to sell it all to Uniden? While that would raise the corporate standing making it simpler to exclude other brands; the overhead to manage RR would add to the budget negating much of the benefits.]

Note: RR is the ONLY database that includes things like the user ID on a digital network, or actual channel designation; it is not part of the license. The licensee obtains the frequencies but then they (the user) decides if it is a dispatch channel; NCIC channel, TAC channel etc. The FCC (and presumably the NTIA) don't care about that as long as it doesn't violate spectrum definitions or cause interference.

It doesn't have to make sense, lawyers and worse drafted then passed it; judges have endorsed it in case law. They excel at hair splitting.

My premise is that since RR access is a 'feature' used in the sale of Uniden products, that FULL access also means full ability to use, including being able to print out what data you choose to use. This ability is available when you buy the scanner and use Sentinel (two different things since you don't need the scanner to run Sentinel, but then Sentinel is merely the access point to RR, creating the licensing issue). Yes, that's a bit more complicated in the legal sphere, solved by licensing Sentinel prior to ability to use, also a complex problem with significant overhead to manage.

However, please note that I only intended the printing of only the Favorite lists, which reverts the data back to personal (public) usage; a super fine splitting of hairs but within the range of the legal types.

I find some of the legal issues fascinating, some are well, stupid and some lack any sensibility. I once considered being a lawyer, but chose a profession that allowed me to sleep better at night. ;o) You must KNOW the law to protect yourself and your rights; to know when you are breaking it and to know how far you can bend it. To do less, isn't a smart ploy.

While anything that has been released to the public domain may be free for use and not subject to copyright, compilations could easily become derivative works and be subject to copyright protection.
For example, prior to the Internet, companies took phone books and produced "cris-cross" directories that allowed you to look up a phone number and then get an address. These were fairly expensive and I remember using ones via the reference librarian at the local library who usually had an updated copy (circa 1970's).
I would think the Radio Reference database would fall under derivative works.

Evan
Look closer at your phone book... it is copyrighted. The information of who has what number belongs to the local Telco, they can chose not to publish information about a particular number (Like when you pay the Telco more for an unlisted number) or charge to provide the number information to a phone book knock off company.

In addition, the FCC "data" shown on RR is mostly links to a call sign when referenced by the user supplied data. This then links to the FCC entry for that call sign and sometimes pulls data from the FCC site.

The RR data as used in scanners such as the 436/536 and others is unique and very much copyrightable. It is specifically licensed to the radio manufacturers and others for specific use and may not be transcribed into other formats by end users.

Forget copyright, remember way back when…. the FCC also had a rule (?law?) about rebroadcasting what was heard on things like them there new-fangled scanners. Well based on LinkedIn, the owner/founder of RR is also the owner/founder of Broadcastify, the same service that many Chiefs across the nation are using to place our hobby on the endangered species list. So while a certain RR seems to get a nice piece of change out of the hobby, they restrict anyone else from doing the same thing. And if you think that's something, try making the statement about rebroadcasting and encryption in the same post and see how fast that gets you thrown off, or least a violation notice… Hmm.

And why do you suppose Lindsay Blanton split-off Broadcastify.com a year or so back? Probably to protect the existance of RadioReference.com since it's a separate corporate entity from the one "rebroadcasting" the supposedly-protected radio communications. It's still up in the air whether or not Internet feeds are the same thing as rebroadcasting over the FCC regulated airwaves where the FCC has sole authority in the USA. It'll take many years and many millions of dollars to defend or attack the process Broadcastify.com is ustilizing as if it were FCC regulated "broadcasting".

Personally, I doubt any legal challenge will gain much traction as long as the built-in delays are kept as they presently are and the feed providers follow the existing or any future feed provider guidelines/limitations. It's not, after all, a "live" feed. Due to technology limitations it always has some several seconds of latency (at least) in any feeds. And Broadcastify.com has been known to shut down certain feeds when something drastic is happening and a local admin or feed provider notifies them. Any time the feed violated Broadcastify.com's rules it should be disabled but this takes a human being to figure out. As yet, the general public and most provate industry doesn't have the technology to monitor every audio source and determine if there's something on it that might be in violation of their rules or FCC regulations.

So, in my opinion anyway, we probably don't have to worry too much about Broadcastify.com going away anytime soon. But due to forward thinking on their part, RadioReference.com will probably survive any attack on Broadcastify.com since they are not doing the audio feeds anymore.

From: Bob Peloquin
Topic: 2067 Message: 2100

The specific limitation on exporting or printing the downloaded database is not mentioned in the EULA (End User License Agreement) found in your Sentinel software's directory. However, that doesn't mean Uniden has to allow you to do something with their software (you don't "own" Sentinel by the way - you have a limited license to use their software) that could violate their own contract with RadioReference.com. And they don't have to publish what that agreement contains since all they have to do is limit your ability to violate the terms by removing or never-including features in Sentinel that could, possibly, violate those (hidden) terms and conditions.

So I doubt any of us will ever know the exact details of the agreements between scanner manufacturers and RadioReference.com because it's none of our business. Both Uniden and GRE (now Whistler) have these agreements/contracts and therefor have to follow whatever is in them as far as limitations on what we can and cannot do with the data. The easiest way to deal with it is to remove the print and export features... Pretty smart strategy IMHO.

I believe it is in the user manual, however.

At least there is some reference to data owned by RR.

Really, copyright law doesn't matter since Uniden has stated that the reason they don't allow certain functions in Sentinel is based on the agreement they have with RR, so don't look for Uniden to risk that arrangement.

That said, there is (or was) a program that someone wrote and posted to RR that prints out the data in the FLs. I don't know if it is still there, but I believe it is. Problem solved, right?

Even easier for you:

You can't currently bypass the time setting. So you will be able to with this firmware update.

But again - WILL having a GPS installed set the time correctly? Ithe scaner saves the time zone (I've had to reset the time, but the time zone is saved) so having a GPS would be a good fix for me.

And I rarely have my scanner off for too long either, but it loses the time after as few as 8 hours.

Scanner blanked out.

I was getting ready to update to the new firmware. I opened Sentinel, plugged in the mini-USB to my 536, plugged in the USB cable to my laptop, selected "E" when the Mass Storage showed up on the 536 screen. While waiting for the computer to see the 536 as a drive, so I could run the firmware, the scanner went blank. The light went out and the display is blank. It appears the scanner is dead. I've checked the power, turned it off and back on, unplugged the power-waited a few minutes and tried again with no luck. I'm not sure what happened but the scanner is now a brick. Any ideas? I'm quite baffled on this one.

I presume that you've used this port before and I'd suspect a stray voltage or static discharge occurred.

What happens with the USB unplugged and the micro sd card pulled? Any signs of life?

Take a peek at the card contents on a card reader too. There have been card issues and that one may be hosed; no firmware, no work but you should see the boot screen (reformat and reload?). Cards are cheap enough that keeping a spare around is not an unreasonable burden.

I presume you've tested the computer USB port too since this happened...

Narrow it down to what it isn't, leaving you with what it might be or is.

73,
Rick wa6nhc

Yes, this was on the same port as previously used with Sentinel. I took out the microSD card and placed it in an adapter. I can read it fine on the computer with the adapter and it does not appear to be corrupted. The USB port was tested with another program and works as expected. There is no sign of life when turning on the scanner after it blanked out after selecting the mass storage option.

Specially for UpMan Paul Opitz:

The new firmware with the analyse function is good, but there are one need, to make BCD536 much better:

Right now, with this firmware for BCD536, You can only use classical search on user defined bands, if You sitting by the receiver. Or You can use Discovery function, but only on one defined frequency band. This makes the Receiver uneffective for short therm scanning. Solution should be:

1 Return of the classical function "Search and Store"

or

2 Function "Discovery" must NOT ignore Broadcast screen

or

3 Possibility to define more than one frequency band for Discovery function.

You've eliminated the computer and the SD card. Now you check the scanner power source (voltage _under_ _load_, fuses, if any, wiggle the connector), try another 12v power source, but if that doesn't work it's likely your scanner is bricked. That blows.

In USA, You have most frequencies prepared in RR database, so You only set State or County, and you can listen if want to.

In Europe you must everything find by yourself. So everyone prefer search functions. In "old" Uniden scanners, there are Search and Store functions and classical Custom Search. If You connect it to PC, You can record audio for later identificion. BCD536 with the Discovery function does not need PC for this, that is the great news. BUT You can define only one active frequency band and in Discovery mode Broadcast Screen are ignored, so You can´t define more wider search band.

In Europe (specially in Czech Republic), we have in classical communications band data networks wide up to 5 MHz, on which Uniden does not works with classical Avoiding. For this You can only use Broadcast screen.

Easy way would be in next firmware update - enable Broadcast screen in Discovery mode, so User can define wider band (for example: defined band 144 - 470 MHz with gap between 174-230 MHz).

Or possibility to link defined Discovery frequency bands, or posssibility to define more than one band in active Discovery session.

OK so here is the latest. I don't believe it is a power issue as I've used several 12 volt sources.

I was able to format the microSD card and then use the Sentinel software to "Clear User Data..." When re-inserted into the scanner it did fire up. However, it again blanked out shortly after selecting the mass storage option. I removed the microSD card and again formatted it and cleared the data. This time it worked. However, about 5 minutes later the scanner went blank while still powered on. I suspect due to a write error from the scanner.

I then formatted a spare 32GB class 10 microSD card. After clearing the data from Sentinel and putting it in the scanner I was able to complete the firmware update. Everything seemed to be fine but several hours later I found the scanner was again blank on the screen. It now indicates a bad SD card after turning on the power. I will get another microSD card today and try again. It seems that something is corrupting the SD card. In both cases I've been able to put the microSD card in an adapter and read them when plugged into my computer.

Frustrating that the microSD card seems to be the issue.

Hate to say it, but I'm thinking there may be an issue with the scanner.

I presume the card does not have any read only switch set (sometimes the simplest of things create havoc, no insult intended).

With a magnifying glass and a strong flashlight, check for any dirt or debris in the card slot (dust, hair, stray ant). Then I'd try a gentle wash with compressed air in the card slot (gentle!) with another peek.

Lastly wipe the contacts by repeatedly inserting/removing the card. If that doesn't improve things it's time for a visit, along with your test notes, to the Uniden ER.

You might also try re-updating the firmware in the scanner and dongle for testing completeness but you've proven that this is likely a failed scanner. :-(

Are You sure, that Uniden works without problems with 32GB Card ? I have made some tests with my Rasbpberry PI and there I saw, that there are really big differences between the the card manufactureres. Not only the read / write speed, but also the memory space. (Two 8GB cards from two different producers, have not the same memory space).

So maybe Unident´s card reader does not properly works with this kind of card, you have.

In Quick Search mode (VFO mode), if You start audio recording, recorder stay in pause mode only until first transmission. After first squelch opening, recorder start to record, and it does not stopping even if the transmission is gone. Recording will be stopped only after frequency change. If recorder runs with squelch closed, it records only silence.

This bug is only in Quick Search mode, if You are in memory mode, there Recorder works (stops after Squelch closed) without problems.

I purchased a new 8GB microSD card (Sandisk) and everything is back to
normal. Cleared the user data, updated the card with the latest data
and put it back in the scanner. It has run overnight without failure.
Frustrating that a read/write error to the sd card takes down the
scanner. At the moment everything is back up and running. Thanks for
all the suggestions.

Okay, all you 536 owners. I have a problem which I need help with. I accidentally deleted my favorites on my scanner while I was trying to write to my scanner to reflect the changes I made on my Favorites List. I accidentally checked the box that deleted my favorites from my scanner. Now my dilemma is how do I get the stuff from my FL back into the scanner. I have tried all that I know not being a technical person. What can I do to fix this. Can I get the scanner to go back to new and then maybe add all my favorites with the California and Nationwide freqs. I am not sure how to do this. HELP!

i am a little lost on this one.after you ticked "delete fls box" what did sentinal do? did it complete the write to function?if it completed the write to , the new fl's with your new changes should have been written to the scanner.go to my computer, find the drive with the sd card, click to open and see whats on the sdcard.if its empty, reformat, use sentinel to write your data to the scanner..don't do a read from scanner, that may blow up your fl info in sentinel. goodluckjj

What I did to get things back in order was just rewrite to the scanner a couple of times this morning and not having any success I followed another suggestion to go to menu-set scan selection-lists to monitor and found that all my favorites were shut off but I k now I did not do it so turned them all back on and now all is well. Thanks for trying to help, it's appreciated.

In the future, if you set MONITOR to ON in your Sentinel Profile, the
FLs will be enabled when you write to the scanner in the future.

  In the future, if you set MONITOR to ON in your Sentinel Profile, the
FLs will be enabled when you write to the scanner in the future.

Yes. The good news is that they're cheap. (Buy a few and keep a spare programmed?) They don't need to be a guh-zillion gigglebytes huge, 4 GB is more than enough.

But... try reformatting the old card FIRST. THEN write to it. If that fails, the failed card makes an excellent target center for a .22 at 100'...

This sounds very familiar to my issue last week. The new SD card I purchased corrected the issue. In my case, it would not even do anything with the bad card in the scanner when trying to power on. Good luck.

Edit the channel settings. Select Set Priority and set it ON.

Then make sure you hit the PRI button to enable Priority Scanning.
(FUNC then the "./no/pri" button)

It is different than legacy scanners, but once you get used
to it, you may end up liking it more than the old method.

Try a SD Formatter/Fixer. I have used it and it seems to fix some SD Cards. Do a Google search under SD Card Formatter. But it still is a good idea to have a few spares!

2139. Unable to program nationwise systems

Yahoo group: BCD536HP
Date: 2015-04-18 10:59:12 UTC
From: jfdnp2007@...
Topic: 2139 Message: 2139

Been all over the place with this, including Uniden but with no luck. I have been attempting to add the nationwide maritime and rail channels but every time I upload these, it reads nothing to scan. The services are set correctly as are ranges and location but it still wont run. I put these in using the Butel program the same way I place the local/regional systems and have no problems with these..
Perhaps I need a 536 for Dummies if one exists.
Any help appreciated

In the BCD436HP group there is a Favorite List file called Service Search that has all the Maritime and Rail channels in it. Much easier to use than trying to use the main dB.

2141. BCD536HP Port values, Audio

Yahoo group: BCD536HP
Date: 2015-04-18 18:22:07 UTC
From: Rick WA6NHC
Topic: 2141 Message: 2141

I've made a bit of time to study how the scanner is remotely controlled and passes audio over wifi. Without actually snooping on the actual network traffic, I've hit a wall, so I'm checking to see if someone has the answer.

So far we know that port:

80 A single web page identifying the scanner
554 rstp transport setup/control
50536 scanner control/display

These port are hard coded into the scanner, no user control. What is missing is the actual port value (range) for the audio transport. It more than likely is a UDP port (send and forget, no acknowledgment).

I can port forward 50536 in my router and gain control of the scanner over the Internet (Siren on an outside network). I also can port forward rtsp port 554, but in THAT exchange, one of the setup commands is to determine what port the actual audio is passed (not 554, that sets up/controls the exchange). Without knowing the expected audio port/range, I can't forward that in the router so no out of network audio is passed.

Rephrased, if we know what the default AUDIO ports are, we should be able to also forward that range to the scanner and get audio remotely with Siren. Without network snooping, this is a challenge. Can someone at Uniden post the ports in use by default please?

Later, I intend to use VLC as an audio repeater so more than one user can listen in (and using Siren, see which 'channel' is talking), but I still need to know where Siren (what ports) expects to get the audio (because I'm guessing it's hard coded, not on the fly). I can tell VLC to use the Siren expected port range.

If I have to snoop on the network, I'll track what VLC is using to gather the audio, but posting the port values would save me considerable time.

Has anyone else gone down this path? I can post my findings as I know I'm not the only one wanting to hear my scanner when I'm not on my home network. We have all but one required critical piece of information...

Thanks,
Rick wa6nhc

Yes. I made a BCD536HP Audio Player.

http://forums.radioreference.com/uniden-software-discussion/308095-bcd536hp-audio-player-2.html#post2344108

If I have to snoop on the network, I'll track what VLC is using to
> gather the audio, but posting the port values would save me considerable
> time.

The port is determined by the client (VLC). Search " Transport: RTP/AVP;unicast;client_port=53600-53601 " in the source code

Source Code here:

It also works different depending on the system being scanned. In trunked systems, a designated priority channel, would only work if you are stopped on any channel.

Thank you!

I'll report back here when I have made progress (multitasking, may take
some days).

My end goal is to provide a single web page, showing the actual channel
in use along with the audio, all based on my hardware, for multiple
simultaneous users (NOT using Broadcastify).

Thanks again,
Rick wa6nhc

2147. How can I downgrade the firmware on my bcd536HP?

Yahoo group: BCD536HP
Date: 2015-04-23 21:16:08 UTC
From: James Luhn
Topic: 2147 Message: 2147

I installed the latest firmware (v1.06.10) in my BCD536HP. This upgrade made the reception of a local P25 Phase II Simulcast virtually unreadable. The scanner was receiving about 90% of the transmissions of this Simulcast system. Now I receive only about 10%. The upgrade only messed up the reception of the Simulcast system. Most of the time the scanner does not stop on the transmissions and when it does the audio is all broken up. Signal level is 5 bars. I have tried attenuation with no changes. Non-simulcast P25 Phase II or fine. My BCD436HP receives the Simulcast transmissions just fine using the same antenna and same programming. I have copies of the older .bin firmware but I do not know how to install it in the scanner. Sentinel is set up for upgrades rather than down grades. Please help as my 536 is useless now.

What system? You could try reinstalling the FW as occasionally a glitch will cause a reception issue too.

There is no reinstall or downgrade option, Sentinel only looks forward in the current version. I find this to be a shortcoming that I'd expect to be resolved later, for just this reason (should an update make things worse).

However, the firmware IS available on the uSD card if you want to manually change it. I've NOT tried this, only passing along info... There will be hazards involved and it's possible that the card loader may refuse to load an older version (it depends on the hard coded routines in the scanner for the actual reader). There are enough unknowns to make it dicey.

If you do not wish to risk this, try reformatting the card (or wiping just the firmware folder), inserting it into a card reader (NOT the scanner) and see if Sentinel will update to that, allowing you to reinstall the current firmware. I've not tried this either, but it's the only logical method to try off the top of my balding head. ;)

But as P25 decoding was not specifically mentioned as being changed, something else may be affecting your ability for hearing the network. A trouble report should be filed with Uniden because changing "code a" sometimes affects other areas not intended for change (1+2=yellow, because it's Monday). Listing the specific system you're trying to hear may help as it may be doing something untraditional, which may be managed differently by the engineers at Uniden.

My caveat: I have no connection with Uniden; I'm happily retired; and accept no responsibility for anything that happens anywhere or time, sometimes even if I did it! :oP

From: John
Topic: 2147 Message: 2150

Its easy to reinstall the FW. Do it by:
1: connect scanner to computer
2: turn it on
3: select MASS STORAGE
4: in windows it should open file manager
5: download the FW from the appropriate site for the 536.
6; extract the zip file
7: copy the .bin file to the firmware folder on the scanner.
8: unplug scanner and it will reinstall the firmware.
Not hard to do at all.

Paul,

How is the 'temporary' time supposed to be determined? It appears it's using 1/1/2013, rather than say the last time I turned the scanner off....

Well of course. However I thought you had mentioned (or maybe I suggested and you agreed) that an idea would be to 'write' the time when the scanner is shut off. And then use that time as the default time the next time the scanner is turned on?

ie I turn my scanner off 4/22/2015 @ 7:45 PM. It can only be assumed that when I turn the scanner back on next, it can't be earlier than 4/22/2015 @7:45 PM?

Also, sorry not sure if this has been answered, but would this be resolved by installing a GPS? ie will the time automatically set if I use the GPS?

From: bob.peloquin@...
Topic: 2074 Message: 2155

None of the HomePatrol series read the time from the GPS. It would take a pretty major re-write of the firmware to accomplish this. It was never intended in the original design. The current 'fix' is simply a patch (I assume) to the firmware to correct a problem until it can be permanently rectified eventually by a recall/repair.

2156. RE: [BCD536HP] When will the 536 be ready to purchase WITHOUT problems Anyone ?

...so I'm cleaning out my mailbox and delete all the posts that were in response to the one sporting the subject line above. In the body of that post was another question dealing with the accidental deletion of FL's and how to get them back. This question was answered to the satisfaction of all and the thread stopped. But I found it interesting that no one attempted to address the subject line question. (At least I didn't see any). Obviously, a question born out of frustration and rhetorical in nature.

Now, I'm not complaining... (Did enough of that over a year ago), but as rhetorical questions go, this one is growing gray hair! I'm just pointing out the elephant in the room that no one talks about. So in the interest of elephants, this observation should also be treated in the same manner... meaning no one need reply because anything that can be said has already been said. I wrote this post out of sheer boredom, waiting for the next firmware update.

That's likely because nobody can answer if the issues can be solved by firmware updates which would mean a 536 made any time would be ready to be purchased without problems (provided a firmware update is done).

Hi bill, I have done the latest firmware update and noticed that nothing changed. I live in CT and reception of any of the digital stations whether it be CSP, Westport or Bridgeport fire the are still distorted, garbled and bassey in sound. I can understand the message BUT it just is not a pleasant sound and you always know it is digital on my 536. As I indicated before this is not the case on my 10 year old 2096 or Pro 96 as they receive digital loud and clear. I hope at some point Uniden can figure out how to resolve this issue. On analog signals my 536 sounds great, I have no complaints here. I use the Diamond RH77 antenna on all 3 radios. thanks, Gil

I live in CT and reception of any of the digital stations whether it be CSP, Westport or Bridgeport fire the are still distorted, garbled and bassey in sound. I can understand the message BUT it just is not a pleasant sound and you always know it is digital on my 536. As I indicated before this is not the case on my 10 year old 2096 or Pro 96 as they receive digital loud and clear. I hope at some point Uniden can figure out how to resolve this issue. On analog signals my 536 sounds great, I have no complaints here. I use the Diamond RH77 antenna on all 3 radios. thanks, Gil

...so I'm cleaning out my mailbox and delete all the posts that were in response to the one sporting the subject line above. In the body of that post was another question dealing with the accidental deletion of FL's and how to get them back. This question was answered to the satisfaction of all and the thread stopped. But I found it interesting that no one attempted to address the subject line question. (At least I didn't see any). Obviously, a question born out of frustration and rhetorical in nature.

Now, I'm not complaining... (Did enough of that over a year ago), but as rhetorical questions go, this one is growing gray hair! I'm just pointing out the elephant in the room that no one talks about. So in the interest of elephants, this observation should also be treated in the same manner... meaning no one need reply because anything that can be said has already been said. I wrote this post out of sheer boredom, waiting for the next firmware update.

Gil,

Again, wondering where you are... Thinking of getting together, program my 536 and 436 like you have to compare reception. Since I have two 536's I was able to make comparisons when I questioned the operation of one 536 or the other...

I think it's a case of "Your results may vary". With all the variables in the mix. Plus he said he plugged in the latest firmware update and noticed no change. Before accepting at face value it would be wise to verify the update took. His concerns have him frustrating over a sizable investment, evident in the question he asks in the subject line of his post. Add to that his knowledge that a better signal is possible, born out by his other scanners having no problem receiving the trunked and digital stuff. So, he already knows it's possible to enjoy the same as your reception report attests to...

He has a classic "cause and effect" concern. He knows the effect and wants to identify the cause. There is a variable yet to be identified, a mystery, if you will. He has ruled out location and antenna by plugging in his old radio and comparing. What's left? That's the mystery. I love mysteries.

2168. No new posts, iPad app question

Yahoo group: BCD536HP
Date: 2015-05-20 08:37:46 UTC
From: hbmarcott@...
Topic: 2168 Message: 2168

I haven't seen any new posts to this group for several days, has something happened to the Yahoo group. I have not seen any posts on the latest version of the iPad App. If I start the app and exit out of the app the scanner audio runs in the background, which is good. But I can not find a way of quitting out of the app to stop the audio, I must mute the audio and then much later it actually exits the app. I probally did not explain it correctly but would like to know if anyone else has seen this.

Double tap the home button (the big one at the bottom of the device),
then swipe the app away. This removes it from the background operation.

2171. New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-20 20:02:51 UTC
From: Kaniecki, Chester
Topic: 2171 Message: 2171

My local dispatch center (Groton, CT) recently started utilizing new frequencies. One of which utilizes a repeater. I programmed the frequency and PL into my scanner and it works perfect as long as I manually select it. The scanner will not stop when there are transmissions on that frequency. I know the frequency and the PL are correct because I hear everything when I manually select it. The frequency is not locked out either. Any assistance that anybody can provide would be greatly appreciated. Thank you Chet

It's enabled. It stops on every other frequency in that custom 1.

If you manually go to that channel, what does
your display show next to the F and S tags?

2178. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-22 00:46:03 UTC
From: N1CHU
Topic: 2171 Message: 2178

I don't know if you tried this, or it isn't even related to your problem... BUT, I'd hate to not suggest it and later find out it was relavent, and fixed the problem.

It seems I am missing something to do with location control, causing a similar problem... either it should be on or off. But it's easy to get to the on/off switch and only takes a minute to try...

In menu go to Manage Favorites, then choose the FL in question. Scroll down to "Use Location Control" and if you find it on, try turning it off. If that works for you, fine. I'll let Joe explain what turning that option on or off does. And why it's there in the first place.

I find it a pain. I'm old school who so far, doesn't have any need to get anal about my file structures. I don't need to tag FL's, singular systems or channels. But am thankful for a radio that can manage them, when that time comes I will utilize the tagging capabilities and the location control, etc. (It's also good to own the one with all the bells and whistles, selling cost wise, if I ever sell it!)

Bill

Topic: 2171 Message: 2181

It's not so much what it *should* say, but what
it is showing as the status of the Quick Keys.

While on the channel, also press the FUNC button and a line will
scroll up with a D at the left. Note what that line is showing, too.

2182. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-22 10:18:31 UTC
From: N1CHU
Topic: 2171 Message: 2182

Sorry guys,

I got so involved with the issue at hand I confused a similar problem I was having on a DIFFERENT radio (BCD536HP) and tried to use it as a solution to your (Groton Ct. System) problem.

The BCD396XT does not have "Set Location Control" and therefore, any attempt to use my solution won't work. Just ignore my post completely.

Many apologies.

Bill

Yahoo Groups Links

2183. Portable Ops short video clip

Yahoo group: BCD536HP
Date: 2015-05-22 13:37:20 UTC
From: N1CHU
Topic: 2183 Message: 2183

I attend military airshows, listen to the comms. NAS Oceana, the Naval Air Station in Virginia Beach, Va., puts a show on each year and the Blue Angels attend. While in Virginia Beach, they stay at the Hilton. The Hilton has a pool deck on top of the hotel, open air, you can see for miles. And since the "Blues" stay there, they salute the hotel by including it in their show by doing numerous fly-bys, using the hotel as a reference point. They fly so close you could almost reach out and touch them!

The pack sports a EARTHX Lithium-ion 12 volt battery that will last for days. It's small and lite in weight. It powers the BCD536HP and a Uniden amplified speaker. The external display screen is a IPad mini with a magnetic mount. (My only concern is using a magnetic mount which I have attached to the radio's metal case-possibly incurring a magnetic field within the radio case. But it plays without a problem). Sorry, I can't tell you where I got the pack, it's been so long ago. But a search of the web for it under ham radio accessories should help you locate it if it's still being made.

Bill

... I'm going back to bed, pulling the covers over my head, and try to forget this day!

Seems I'm double confused. So I'm going to leave it at this... If the Groton, Ct. System problem is related to a BCDX36HP scanner, then my original post stands, suggesting "Set Location Control". If it pertains to a BCD396XT, disregard it. I'm getting my Yahoogroups confused.

Sorry again for the confusion.

Bill

2185. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-22 14:37:34 UTC
From: Yahoo
Topic: 2171 Message: 2185

When I go to that channel just the favorite list that the frequency is in is on. I don't have any talk groups because none of the frequencies in that list are trunked. All the other frequencies in that favorite list scan just fine. As for location services I have that selected as being off.

2187. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-22 14:45:15 UTC
From: MCH
Topic: 2171 Message: 2187

What about the System tags? (note: tags, not TGs)

I would double-check the programming of that channel to see which Service Type is programmed and make sure that is enabled. I would also check to make sure AVOID is not on for that channel (will show AVOID in the screen when sitting on that Channel if it is).

Joe M.

2188. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-22 16:01:08 UTC
From: Yahoo
Topic: 2171 Message: 2188

I don't have any thing listed to avoid but for some reason half if not more of my service types are turned off. I don't know how or why that would happen but I turned them on and the scanner immediately came to life. As for the frequency that started this all I won't know if that works since they currently have it down for maintenance. I think I'm moving in the right direction though. Thank you for all the responses. They are truly appreciated. Once that frequency is fully operational I will update everybody.

2189. Re: [BCD536HP] New Frequency problem

Yahoo group: BCD536HP
Date: 2015-05-27 13:21:33 UTC
From: Yahoo
Topic: 2171 Message: 2189

Just wanted to update everybody. The service type for Fire Tac was turned off. I turned it on and it is working great. Thank you for all the help.

2190. New Frequencies, do tell

Yahoo group: BCD536HP
Date: 2015-05-28 14:01:01 UTC
From: RJH
Topic: 2190 Message: 2190

Hi Chet,

I suspect you meant something else, but what are these new frequencies for Groton you are talking about? I sent you the Radio Reference list are these frequencies in addition to what I sent you?

Thanks,

Ray

2191. 536 Oddity - won't power off

Yahoo group: BCD536HP
Date: 2015-05-29 15:50:10 UTC
From: Evan Platt
Topic: 2191 Message: 2191

So last night I got into my car and turned on the 536. It got stuck at my custom welcome screen. I turned the power switch off, but the radio stayed on. This was for at least an hour (my drive from work, ran some errands, etc - The scanner is run through a battery tender, so it's on for about an hour after I shut off the igniton). Turned it on this morning and it was fine. And it turned off too.

Any ideas what happened?

Thanks.

I would say it was an SD card glitch.

Yes, and it will happen again several times. Then it won't work at all.
My suggestion is to connect to Sentinel, clear user data, and rewrite.
That might not fix it and then a new SD card would be in order.

Topic: 2191 Message: 2194

I did remove the card, but still it wouldn't turn off. So apparently the power switch doesn't fully do whatever is actually done to turn the scanner off - which makes sense, it goes through a power off sequence....

From: MCH
Topic: 2191 Message: 2195

When the CPU is glitched (reading the card and getting a bad byte),
removal of the card won't fix it. You need to remove the power from the
unit to reset it. I would perform the steps Gary suggested to fix it.

2197. Re: [BCD536HP] New Frequencies, do tell

Yahoo group: BCD536HP
Date: 2015-05-29 17:36:24 UTC
From: Yahoo
Topic: 2190 Message: 2197

We really only got one new frequency and renamed the other frequencies. The new frequency is "command west". The tac frequencies are now fireground frequencies. I believe they are on Radio Reference. I don't have the matrix with me right now. Command East and West utilize repeaters.

Sent from my iPhone

There is something very flaky about how the power is done in a 536, it is VERY sensitive to decreasing supply voltages.

Most likely had you shut the car off and restarted it it would have rebooted and corrected.

From what I can tell this goes back to the loss of receive that occurred from time to time. Undien made a change to the Firmware that reboots the unit after voltage fluctuations to resolve the problem.

The very annoying problem is now it will just go nutz, full volume squelch noise, no control what so ever, once the motor is stopped and the battery voltage is decaying from charge voltage down to normal state voltage. The quickest way to get it back functional again is to restart the vehicle to cause a reboot.

Seems to me like this is a design flaw in the internal voltage regulation. I can see this causing problems like the one described above as well.

Uniden hasn't mentioned this problem, I'm sure they are aware of it, and they may well be working on it. I'm thinking that I'll open mine up and see if I can determine a fix to get it to quit doing this. Unfortunately it's now fairly obvious that the R&D area of Uniden is not currently up to the task.

If all you want is a basic digital scanner, either the HP-2 or BCD325P2
may be a better choice for you. The x36 is a high end model.

Well yeah - I couldn't easily shut off power as I mentioned, the scanner is connected to a battery tender. Once it did power off then when I turned it back on it was fine :) Would have been bad if the scanner were hard wired direct to the battery :)

From: iba9241@...
Topic: 2204 Message: 2204

I'm a new 536 owner and I have set up some Alert Light colours for Fire, Law, etc. Is there a way to configure the scanner so that the Alert Light stays lit for the complete transmission? It appears to only light for a few seconds and then goes out. even though the transmission is still going on.

I couldn't find anything in the manual to address this, and I apologize in advance if I missed the answer in this forum

Thanks for any and all help;
Gord

FWIW, the BCT15X and BCD996P2 alert light work the same way as you
described for the BCD536HP.

I wish the alert would remain active for the duration of the
transmission, but haven't found a way to enable this.

You won't find a way. As I mentioned earlier, it
would violate a patent Uniden does not hold.

It's been a while since I read it, but I think it specifies solid or
flashing, and the pattern likely would not matter, nor would the rate,
but that's good thinking about a possible way around the patent.

Getting the Alert light to remain on for the entire transmission, be it solid or blinking... I have not found this capability. I believe, as the scanner was produced, there is no setting that will allow a continuously lit Alert light. It's one for the list of what we would like to see in the future.

Cute idea. As a "unique feature", I suppose it could be a patent rights question, something they would like to guard against others doing, but wonder if it would be a selling feature of the radio. If others spelled out their name, would it take away business from Uniden? I doubt that is the case. Not to mention, Uniden has better things to do with the room available in the CPU for firmware changes.

Bill

2212. Re: SD CARDS

Yahoo group: BCD536HP
Date: 2015-06-01 10:16:37 UTC
From: n1chu@...
Topic: 2131 Message: 2212

Posted below is an excerp from the Facebook group for the BCDX36HP's... It has to do with the SD card issues people experience from time to time. And it may have a bearing on the problem or not, but it's a good read. The guy who originally submitted it, which I would like to thank, is of course listed with his post and if anyone cares to check out the Facebook group, you will see who he is. I didn't capture the heading when I copied.

The long and short of it is this... When swapping out an SD card, assure it meets the scanners requirements for read/write times-replace an SD card with a "like" card.

Hmmmm…apparently there is a difference in cards. I'm thinking the only difference you might notice is how fast the scanner reads from the SD card to load the national database.This from:

http://www.pocket-lint.com/news/116714-best-sd-cards-video-cameras

Read on:

SD card class and write speed

This is probably the most important and least well understood part of the SD card mystery. The Class of your card matters. The reason you'll find memory cards of the same capacity at vastly different prices is that one will be a lot faster at writing image and video files than the other, and that's something that can make a big difference. Why? Because your camera might well be trying to deliver them faster than your SD card can scribble them down.

Whether in some super-high-speed burst mode or shooting a stream of 1080p video, that's a lot of data to get from lens to memory card in any one moment, and if the write speed of your SD choice is the weak link, then your device's performance is going to degrade.

This is where the Class system on these little, flat memory cards comes into play. With each rating (Class 2, 4, 6, 8 and 10) comes the guarantee of a minimum write speed. They are 2, 4, 6, 8, and 10MB/second as you might guess by their names, and the labelling on your card to look out for is one of these numbers surrounded by a C. The only other one you'll find is if it's a UHS-type card on which you might see UHS-1 written or a U with a 1 in it and, like Class 10, that offers minimum write speeds of 10MB/second.

I understand. I also don't know if the patent has ever been challenged, as many other companies have had activity LEDs such as GE. But, it was not on a scanner. I also don't know if a loophole might be to include TWO LEDs rather than one if one is specified.

Your comment reminds me of the guy from Shark Tank who got a patent on holes for running wires through clothing for headsets and other tech devices. He made a ton of money from suing any clothing manufacturer who added holes in their pockets for running wires, as that violated his patent. Most companies decide to settle the case as opposed to spend more going to court.

Completely unrelated to scanners, but there was a guy who travelled to some small town in California. He's 'disabled' - at least he has a disabled placard. He went around this small town, and apparently found every store to be violating the ADA requirements. So after his weekend trip, he sent violation reports to about every shop, claiming they were in violation of ADA requirements, and they had like 72 hours to fix it, or he'd sue them for some obscene amount. Or, of course, they could pay him a settlement fee.
Some places caved in and paid, a few shops actually were forced to close.

There's a special place in Hades for people like that.

Roger that! The alert lamp thing... Really? Allowing it to remain on for the duration of the transmission is hardly a selling point. Ah, but it is a "feature". I just don't see how when comparing scanners it would come down to just that one. But I do remember reading an article in Boys Life, the scouting magazine, about two people applying for a job, identical in every way, but one put down on his resume that he was a Boy Scout! He got the job! Still, it was only one feature!

I also have a PRO-197 and PSR-600 that allow you to program the activity led and I find the feature very helpful. I have set local fire flashing red and local police steady red, I use other colors for different towns with the same flashing for fire and steady for police. For me, I can tell who is talking when I am further away from the unit,

Well GRE must have had the patent as the former GRE and RS scanners all
hold a steady alert light (on a separate light) not the display that is
much nicer then the Unidens. Only wondering?

Back in 1978 that might have been the case and since the only alpha tags were on the index card of top of the scanner :-)
But alas, technology today allows you to receive virtually anything including passing by military air refueling and gives me more to listen to that I can keep track of here in Southeastern MA :-)

OMG... At the risk of acknowledging there could possibly be a credible reason for doing what you did, other than "because I can", I have a few questions;

What do you estimate the total cash outlay for all the electronic devices mounted set you back?

How much did it cost for Hydraulic suspension, including trunk mounted batteries? I'm guessing you have 4 independent suspension systems (one for each wheel) by your listing 4 separate 12 volt batteries mounted in the trunk, requiring 4 separate controls mounted up front.

Did you insure the extra electronics, how much does that cost per year?

Is the Colt your sole means of transportation? Is it garaged when home? At work? When out and about with the car, do you worry about parking it while shopping?

How, in do you pass state vehicle inspections? Talk about distracted driving!

I have 4 custom mounted radios in my truck. 3 ham transceivers and a scanner, with 4 antennas (2 antennas mounted on the front hood and the other 2 on each side of a Back Rack mounted in the pickup trucks bed). Nice console between the seats for the radio mounts. All powered by the vehicle's single battery. And I can't begin to concentrate on all at the same time plus pay attention to the road. I do a bit of hill topping... Park the truck on a local mountain top, scan the bands and loose track of time (usually causing the locals to call the police on me which I hear being dispatched to my location. Most cops will climb aboard if it's bad weather or just hang with me, listening to what I've got going on, intrigued by the comms).

Bill

The 536 has a lot more features over the 996P2.

I'm surprised that the 536 would cost less. Either
the 536 is under-priced or the 996P2 is over-priced.

The 536hp has more "features" but also comes with a built in failure mode due to the use of a micro-SD card. If you do not have steady AC power, my recommendation is don't waste your time and money on the 536. One good power blip and the SD card will be toast. You may or may not be able to recover it by reformatting.

I am currently in the process of programming a 996P2 that is replacing a 536HP due to this problem.

BTW the 996P2 should cost less than the 536HP. Check HRO or AES.

While it is true that an unusual number of OEM SD cards have been
corrupted, the fact that relatively few replacement cards have suffered
the same fate leads me to believe it's a card issue not a scanner issue.

I haven't heard about the power glitch issue. Wondering if it is a static buildup charge that hit the SD card... You don't mention if the AC power issue caused any other problems with the radio...

My experience, having both a 996 and a 536 is entirely opposite. Though each radio has its own learning curve, neither difficult to program after understanding the manual, the 536 is more involved, which requires more time in understanding the features and then programming them. As for the cost of each, I just check the Scanner Master site, haven't lately, but I would expect the 536 costs more.

Right, it's loaded with nothing. And so is the X36HP's. They are not loaded either. If by loaded you mean programmed. The only difference (frequency data basewise) is that the X36's carry the complete RR data base with them on the SD card. The 325 doesn't. So you can use the data base on the RR site to program your radio or you can use that same database (provided you updated it from RR) on the SD card. Not much difference there, just where you get it from. The use of the word "conventional" when describing the difference between the X36's and the 325 is confusing. Perhaps a different description is in order due to how we discern the difference between trunked systems and "conventional" systems. You've got people thinking the 325 doesn't do trunking.

Press SYSTEM AVOID AVOID to permanently avoid a System.
(while scanning that System)

If you re-write the scanner via SW, you will 'undo'
that, so you may want to Avoid it in Sentinel as well.

From: N1CHU
Topic: 2244 Message: 2244

If I stop the scanning by pressing the "Channel" button I can scroll through the channels manually, one channel at a time. But not if I stop the scanning (on a "Department" or "System" level) by pressing the "Department" or "System" button. I expected if I stopped scanning by pressing the system button I would still see scanning through Departments and Channel-and I do. But in addition I expected to be able to manually tune through all the different systems. Not true. At least I haven't been able to. Same thing with the Department button. Did I miss something or is this not a feature of the radio?

That's the way it works. Channel highlighted scrolls channels.
Department highlighted scrolls Departments. System highlighted scrolls
Systems. The one difference is that the Channel highlight doesn't 'time
out' as there is nothing to scan once you are holding on an individual
Channel.

It's a bit tricky at first, but you can do it. Press "System" and you will see the current system name highlighted. From there, you can scroll through the systems until you get to the one you want. Then press "System" again and the scanner will hold on that system. It would have been more consistent if they'd done it the same way as they did for Channel, but they didn't. Department works the same way.

You can do the same thing with SITE on a trunk system.

I think all the programming and sd card stuff is barking up the wrong tree..

There is definitely a power supply issue in the 536 causing this.

I'd be willing to bet the engine was off and you were running on car battery when it happened.

The quickest way to restore operation is to start your car, which causes a reboot. There isn't anything you can do from the front panel to help since the scanner is not responding to any front panel operations.

It's something to do with a dropping supply voltage that is still well within operating range that is causing this. I'm hoping Paul has picked up on what I've written here and previous messages and passed it back to engineering.

So everyone else can keep reprogramming and stuffing new SD cards in all they want, I don't think it's going to help.

Well, the car was off - overnight. I then started it, and the radio 'stopped' on the welcome screen. At that point, like I said, things were off the second battery so I had to wait 2 hours to kill power to it (when the battery auto shuts off).

I did try the SD reflash, so we'll see..

2256. Clock observastion

Yahoo group: BCD536HP
Date: 2015-06-27 22:57:10 UTC
From: Paul Wolsko
Topic: 2256 Message: 2256

Hello group!

I've had my 536 shortly after it having arrived on the scene and have had no problems at all...until today, sort-of. I last updated my Radio Reference thing last Monday, which was the last time I had the scanner on - it's been plugged in, so it's been four days since it's last been on. When I fired it up today, it prompted me to enter the date/time stamp (or skip it). I entered the info and, since then have turned it on and off a few times - no problem at all.

So my question is: How long does a full charge on the internal clock battery last? I have the latest Firmware.

Paul

The charge lasts about a week. That figure might increase if the theory
is correct about the cause of the RTC sleep state not being entered.

2259. Question about wifi

Yahoo group: BCD536HP
Date: 2015-06-30 02:44:24 UTC
From: Howie Seiden
Topic: 2259 Message: 2259

Last November I bought a new Ford Explorer has the SYNC system. Today while accidentally hitting buttons my wifi kicked on the scanner app that I have on my android onto the vehicle stereo system.As I am not to familiar due to my lack of available time I was curious if I use my 536 in the vehicle with the wifi dongle what else would I need to get it thru my steroids system. I guess I could USB or thru line in but would prefer wifi wireless so is this easily doable?
Thanks in advance
Howie.

Ford's SYNC system can use your phone's data plan to access the Internet. It connects via WiFi and Bluetooth to the phone if you have the WiFi hotspot and Bluetooth enabled. It uses the phone as the router as does the 536 if it's set in infrastructure mode.

You must have a data plan which supports WiFi hotspot to utilize the phone as a WiFi bridge/router.

You must enable infrastructure mode and set security to match the phone's hotspot as well as set the SYNC to connect to the phone's hotspot.

You must connect the SYNC to the phone via Bluetooth. Now the Uniden 536 app on the phone will use the car's stereo speakers as the output from the 536.

The display is one color only. You can only change the color
for the Alert Light which is the ring around the scroll knob.

2268. Somewhat O/T: Organization of channels on RR

Yahoo group: BCD536HP
Date: 2015-07-06 17:54:41 UTC
From: Evan Platt
Topic: 2268 Message: 2268

So wondering - who or how are channels organized in RR? (And hence pulled into Sentinel)?

For example on a number of systems, I see a horrible 'sorting' of channels:

Fire Channel 1
Fire Channel 10
Fire Channel 11
Fire Channel 12
...
Fire Channel 19
Fire Channel 2
Fire Channel 20

One would expect - the way a radio would actually be programmed would be 1,2,3,4,5.... 10, 11, 12.. etc.

I can change this right? But then it's 'lost' whenever I do an update? Or only if there's a change made? Ideally I'd change it on the nationwide list, not on the favorites...

Ideally, is there a way to suggest to RR (or maybe even a way to sort in Sentinel)?

Thanks :)

Yes, the 1/2 should be listed as 01/02, but you can rarely tell RR
anything like this since they refuse to make any changes "at the benefit
of a third party".

You're better off making a FL and changing them. If you change them
there, they will not be overwritten on an update.

Even Windoze has finally gotten this right. What you are seeing is a primitive version of computer sorting. The reason is because the system being used can only read from left to right, and not take the whole number into consideration. Therefore, ANYTHING starting with “1” will come before any other greater than zero number… Even 1000 will come before 2, because of the 1. The way around such problems is to prefix single digits with a 0, hence, 01, 02, 03,… 10, 11, 12, etc. As mentioned, the problem is the system handling the numbers is doing it in an archaic way.

Evan,

There are two different issues that you bring up in your original post.

The first issue is the sort order define in RRDB. In truth, there are several different ways to sort information in RRDB. For conventional subcategories, they are "sort order", frequency, alpha tag, and description. For trunked categories, they are "sort order", decimal, alpha tag, and description. In most cases, the admins use frequency/decimal. Sort order is really hard to maintain. It allows the database to follow a order hard coded by the admin, but has to be reorganized to slot a new entry in the middle. Note that entries with the same sort order then fall to frequency/decimal afterwards. Two talkgroups sorted using sort order and having the same sort order value will then be sorted by decimal talkgroupID. The information you see in RRDB is order how the admin desires for best usability.

Now, move to Sentinal. Sentinal is always sorting entries is description order, treating all characters as letters. 1 (space), 10, 2 is sorted in character order (x31x20, x31x30, x31x20).

Here's an easy example to illustrate Sentinal's sorting. Look at the Summit County 800 system (http://www.radioreference.com/apps/db/?sid=2707). Scroll down to Green/Coventry/Springfield/Lakemore talkgroups. Notice they are not displayed in either decimal or description order. They are using a custom sort to display the talkgroups in order by service, then by channel usage within the service. Also notice that all of the talkgroups tagged "Fire Dispatch" are grouped together.

Now, head on over to Sentinal. The system we just looked at is USA -> Ohio -> Summit -> County Systems -> Summit County Regional 800 Radio. Select the Green/Coventry/Springfield/Lakemore entry on the left to display the list of associated talkgroups on the right-hand side. Note they are in alphabetical order. One easy way to spot this is those Fire Dispatch talkgroups that were grouped together in RRDB. They are now scattered throughout the list.

I believe Sort Order is returned as part of the RRDB web service, which Uniden uses to create the master DB each week for us. I think you have to get Uniden to move the order column into Sentinal to allow us to follow the RRDB sorting. It might also be nice to allow Sentinal to define its own order for entries.

Sorry for the long explanation, but I hope it helps.

Frank

It does. It's called a Favorite List.
You can sort the channels however you want.

(Not truing to be a smart donkey, so

If you don't change the names, you can simply append the System to the
FL and any new channels will be added. Of course, you may have to
re-sort the new channels, but the existing sort should remain intact.

This was a close call freq I stored in my 536 (or maybe it was my 436, can't recall) but kept hearing this at the beginning of almost every transmission. Not all, but most.

What is it?

For the curious, this was a FBI survaillence on 172.xxx mhz - didn't sound repeated, at one point I only heard one person, and they were about a mile from me.

Subject: [BCD536HP] P25: What's this noise?

http://www.espphotography.com/noise.wav

This was a close call freq I stored in my 536 (or maybe it was my 436, can't recall) but kept hearing this at the beginning of almost every transmission. Not all, but most.
What is it?

For the curious, this was a FBI survaillence on 172.xxx mhz - didn't sound repeated, at one point I only heard one person, and they were about a mile from me.

That's the actual sound of the P-25 signal. Apparently you had marginal reception which then cleared up so the vocoder chip could correctly decode the audio. You may be having multipath reception or are listening to a simulcast P-25 system.

That's somewhat normal in digital communications as signals become weak or distorted. Usually it just goes silent but occasionally you'll hear the actual analog tones of the P-25.

It wasn't a system, it was a single channel (I believe simplex, since at one point I could only hear one of the agents. They were about 2 miles away.

Sorry Bob

P-25 transmissions are not analog audio tones.

The RF signal of a P-25 transmission is an unmodulated RF carrier that is shifted between multiple points within the assigned RF channel in a defined sequence. Analog audio at the transmitting radio is converted into a digital bit stream that is sent to the vocoder chip which "packages" the digital signal for transmission. At the receiving radio the process is reversed as the detected digital signal is "unpacked" into a digital bit stream and then converted back into analog audio that we can understand.

The sound appears to be some sort of unit identifier.

While P25 is not analog, there are distinct analog components, as there would be with any digital signal. Just listen to a P25 channel on a non-P25 scanner. It sounds pretty much identical to what the OP is hearing.

BTW, while the carrier is not modulated by audio, it is modulated. P25 has different levels (the exact levels depend on the type of P25 involved - there are several types) which represent the transmitted bits. If it weren't modulated, it would sound like a dead carrier. Anyone who has heard P25 knows it does not sound like that.

The recording sounds like a unit ID, as Milt suggests. As it's length was short in nature, and separated from what sounded like a complete transmission, the intelligible portion sounding like it did not start mid-sentence, but from the beginning. (I could be wrong-I haven't listened to the recording again to verify this point.) Why the digital ID was even heard is probably as explained, one of the many things that can happen with vocoders, fringe area reception, multi path, etc. I don't know how it was determined the transmission was simplex but if so, wouldn't it further point to the data burst as a unit ID?

Bill

If you listen again to the clear voice portion it has all the characteristic distortion of P-25 digital voice. P-25 does not use unit ID as a separate digital stream before or after the transmission - it's encoded in the data stream containing the digital voice. This can only be a bit of un-decoded P-25 before the clearly decoded (as clear ar P-25 ever is) appears.

So we're clarifying that the analog playback thru speakers is actually an encoded digital signal - I guess much like hearing a fax machine or modem.

Are there programs out there that decode the wav file back into it's digital stream? An area I know nothing about, but must be out there. Is it a standard packet much like internet traffic? Just curious.

Well, faxes and modems do use audio tones
(AFSK), so it's not exactly the same.

There are programs that will decode the P25
data, much like the x36 series scanners do.

The reason you heard the noises in the first place was the bit error rate exceeded the code's ability to recreate the packet from available data. There was data missing or corrupted by multipath or signal fading that cannot be recovered. Trying to decode that burst of data will yield nothing of value as it's too corrupted for the vocoder chip to decode so no software program will have any better luck. DSD is a program which is designed to software decode P-25 and several other digital formats. It requires a discriminator tapped audio stream to work. Once it's been through the audio chain's filters, there's no way you'll get useful digital data out of the noises you hear.

Joe, you are correct in that the carrier is "modulated" but not in the way that one normally thinks of when thinking about AM or FM modulation. Perhaps I should use the the term "unmodified" to describe the RF carrier in the data realm.

Those "distinct analog components" originate in your analog receiver, not in the P-25 transmission. To understand this back up and remember how analog and digital are different.

In analog modulation we use the analog audio to modify the RF carrier wave. In Amplitude Modulation, we vary the amplitude of the RF carrier at the audio frequency. In Frequency Modulation we vary the frequency of the RF carrier at the audio frequency within the assigned channel bandwidth. Phase Modulation can also be used, early versions of FM were actually a variation of PM.

Remember that in analog we modify a RF signal (the carrier) with the analog modulation. This is sometimes referred to as impressing the analog signal ONTO the RF carrier.

In analog reception the receiver has to detect the entire audio signal bandwidth which can include locally generated noise or interfering signals. The analog signal is SEPARATED from the carrier signal in the detector stage and then amplified to drive the local speaker.

When we shift into the digital world we no longer have a continuously varying analog audio signal to work with, we only have two states; on and off, or 1 and 0. In order to represent an analog audio signal we have to convert it into a digital waveform. We do this by sampling the analog waveform at periodic intervals. The faster we sample, the more accurate the representation of the original signal.

We then use a process to convert the sampled waveform into a digital bit stream of 1's and 0's. This conversion process follows a set of rules which allow for representation of the amplitude and frequency of the sampled waveform.

In digital we typically do not modify the RF carrier signal. We do however use the RF carrier in ways that can be detected by the receiver.

Lets start with the easiest digital signal...CW... on and off keying of a RF carrier. The RF carrier is either on or off and is unmodulated. The signal information is transmitted by a defined pattern of short and long bursts of the RF carrier signal. As long as both the sender and the receiver know the defined pattern, the information can be sent and received. Of course the most common pattern is known as Morse Code. The simple presence or absence of the RF signal at the receiver is

detected by audible or visual means and converted to a bit pattern by the operator. The pattern is then decoded by the operator. The conversion and decoding usually occur simultaneously in the operator's mind although microprocessors can also be programmed to perform the work.

Lets move forward to digital paging. The digital paging waveform is a RF carrier signal that is shifted above and below the RF channel center (the assigned frequency) by a defined amount (such as +4KHz and -4KHz) within the RF channel bandwidth (in this example a 25KHz channel). The actual RF carrier is NOT modified; the pattern of frequency shifts is the "data modulation". The information sent is by way of the pre-defined standard pattern of shifting the RF carrier between the two offsets from the center of the RF channel. This data modulation is known as 2 level Frequency Shift Keying (FSK). The digital paging receiver only needs to detect frequency shifts. The resulting waveform can be cleaned up with simple circuitry and is presented to the chip which decodes the information and sends it on to a display.

If one listens to a digital paging channel with an analog receiver you will hear what sounds like tones at the start of each paging sequence. In reality this is a fixed data pattern that signals the start of a new message. When the analog receiver attempts to reproduce the data signaling it SOUNDS like an audio tone but examination of the signal with an oscilloscope will show that it is a data signal.

Another all digital system I worked on was the IBM/ARDIS mobile data system that later became Motient before it's demise. It was a 4800 baud nationwide data system operating at 800 MHz. Again the RF carrier was not modified but simply shifted between two offsets within the radio channel.

Moving forward to P-25. P-25 is a series of defined standards that govern how digital RF systems operating under the standard will function. Going back to our CW example, it is the "Morse Code" of the current public safety digital radios. The C4FM RF signal used in P-25 Phase 1 systems is only one part of the overall P-25 system. The frequency offsets (there are 4) and bit patterns are all defined in the standard so that at a common level any P-25 Phase 1 radio can talk to any other P-25 Phase 1 radio. Again, listening with an analog receiver will result in the analog radio attempting to produce as close a representation as possible to the signals that it hears; but the signals it hears are patterns of frequency shifts, not analog tones. A receiver optimized for digital reception of P-25 would only have to detect and output the frequency shifts, not the entire communications audio spectrum of an analog receiver.

Back in the day I took a training class on Motorola's initial version of Astro that used the VSLEP codec. The sampling of the analog audio took place at 44KHz, pretty much CD quality. This high quality sample however produced a digital bit stream that was far too large to be able to be transmitted in a 12.5KHz or even a 25KHz RF channel.

In order to be able to transmit such a large amount of data in a small slice of RF space, the data was run through a process which "compacts" the data. The process looked for specific repetitive patterns of data which were removed and replaced by short pre-defined patterns of data which would serve as representations of the larger data pattern. After adding error correction bits the data was ready to be sent to the transmitter. In the receiver the process was run in reverse. IMBE and AMBE+2 codecs use a similar process to compress the data.

So to wrap this up, there are no analog tones transmitted as part of a P-25 system. Any audio input into the P-25 radio is converted into data. The data sent by the radio, when heard on a scanner receiver, will sometimes produce noises that SOUND LIKE analog audio tones.

I have found that the Uniden scanner radios do an excellent job of muting in the presence of digital signals. The duration of the noise in the audio sample is longer than the typical time needed for a Uniden scanner to mute with typical settings.

Going back to the audio sample in question, the noise is at the proper place for a Beginning of Transmission Unit Identifier such as MDC-1200 or GE-STAR. I have seen MDC1200 squawks (an Audio Frequency Shift (AFSK) data system) used for more than just unit ID.

The P-25 radio does not need to send a pre or post transmission ID because the unit ID is part of the data transmitted by the radio (those extra bits that get inserted before the digital representation of the TX audio is sent to the transmitter). Scanner receivers usually do not do a good job of accurately reproducing analog audio tones from digital transmissions, especially when the audio tones are in rapid succession.

One possible conclusion is that this was some sort of patch between a P25 system and a system using MDC1200. There is only one transmission so we are not given a whole lot of information to work with.

There are other possibilities as well.

In reality this is a fixed data pattern that signals the start of a new message. When the analog receiver attempts to reproduce the data signaling it SOUNDS like an audio tone but examination of the signal with an oscilloscope will show that it is a data signal.

Another all digital system I worked on was the IBM/ARDIS mobile data system that later became Motient before it's demise. It was a 4800 baud nationwide data system operating at 800 MHz. Again the RF carrier was not modified but simply shifted between two offsets within the radio channel.

Moving forward to P-25. P-25 is a series of defined standards that govern how digital RF systems operating under the standard will function. Going back to our CW example, it is the "Morse Code" of the current public safety digital radios. The C4FM RF signal used in P-25 Phase 1 systems is only one part of the overall P-25 system. The frequency offsets (there are 4) and bit patterns are all defined in the standard so that at a common level any P-25 Phase 1 radio can talk to any other P-25 Phase 1 radio. Again, listening with an analog receiver will result in the analog radio attempting to produce as close a representation as possible to the signals that it hears; but the signals it hears are patterns of frequency shifts, not analog tones. A receiver optimized for digital reception of P-25 would only have to detect and output the frequency shifts, not the entire communications audio spectrum of an analog receiver.

Back in the day I took a training class on Motorola's initial version of Astro that used the VSLEP codec. The sampling of the analog audio took place at 44KHz, pretty much CD quality. This high quality sample however produced a digital bit stream that was far too large to be able to be transmitted in a 12.5KHz or even a 25KHz RF channel.

In order to be able to transmit such a large amount of data in a small slice of RF space, the data was run through a process which "compacts" the data. The process looked for specific repetitive patterns of data which were removed and replaced by short pre-defined patterns of data which would serve as representations of the larger data pattern. After adding error correction bits the data was ready to be sent to the transmitter. In the receiver the process was run in reverse. IMBE and AMBE+2 codecs use a similar process to compress the data.

So to wrap this up, there are no analog tones transmitted as part of a P-25 system. Any audio input into the P-25 radio is converted into data. The data sent by the radio, when heard on a scanner receiver, will sometimes produce noises that SOUND LIKE analog audio tones.

I have found that the Uniden scanner radios do an excellent job of muting in the presence of digital signals. The duration of the noise in the audio sample is longer than the typical time needed for a Uniden scanner to mute with typical settings.

Going back to the audio sample in question, the noise is at the proper place for a Beginning of Transmission Unit Identifier such as MDC-1200 or GE-STAR. I have seen MDC1200 squawks (an Audio Frequency Shift (AFSK) data system) used for more than just unit ID.

The P-25 radio does not need to send a pre or post transmission ID because the unit ID is part of the data transmitted by the radio (those extra bits that get inserted before the digital representation of the TX audio is sent to the transmitter). Scanner receivers usually do not do a good job of accurately reproducing analog audio tones from digital transmissions, especially when the audio tones are in rapid succession.

One possible conclusion is that this was some sort of patch between a P25 system and a system using MDC1200. There is only one transmission so we are not given a whole lot of information to work with.

There are other possibilities as well.

Actually, in P25 there are 4 states, as two bits are conveyed at once.

> In digital we typically do not modify the RF carrier signal. We do
> however use the RF carrier in ways that can be detected by the receiver.

No, in digital the frequency of the carrier changes by the shift offset.
This is most often done by varying the voltage of the oscillator. Well,
perhaps I should not say most often, but it is often done that way.

If you look at the signal on a scope, you will see that the carrier is
shifted up or down by the amount of the shift, and in the case of a
4-state scheme such as P25 the carrier is not really ever at "Frequency
+ 0 Hz" although on the whole it might average near frequency +0 Hz.

Absolutely correct. But, CW is a one-state scheme. The carrier is either
on (exactly on frequency) or off (no carrier at all). P25, for example,
is a 4-state scheme employing a constant carrier "on state".

But how can you have frequency shifts if the carrier remains on the same frequency? Again, you are absolutely correct about the basics, but the carrier does change - by +/- 4 kHz as you said. I actually believe it's +/- 4.5 kHz, but let's let the shift issue slide for the sake of argument.

There are also digital paging formats that shift more than 2-states, such as FLEX which is a 4-state shift scheme (much like P25, but not exactly the same).

It will show the square wave that is a digital modulation. With POCSAG you will hear it at the beginning and end of the page (unless multiple pages are sent in sequence).

A 400 Hz square wave will sound like a 400 Hz sine wave with the exception that the square wave will have more/stronger harmonics.

But, they both manifest themselves on an analog receiver as a 400 Hz tone even though one is analog and the other is digital.

I thought it was on 900 MHz, but another point for a later time. (unless I'm thinking of another nationwide paging carrier that starts with the letter "A".)

I never said, or meant to imply, that the P25 format used analog tones. I hope you didn't think otherwise. But, it will have the distinct audio components we discussed previously. And yes, those are caused in the receiver, but the carrier does shift by +/- either 0.6 or 1.8 Hz, I believe, as the four states are transmitted (for C4FM P25). It will virtually never remain on the carrier frequency.

> So to wrap this up, there are no analog tones transmitted as part of a
> P-25 system. Any audio input into the P-25 radio is converted into

Again, I hope I didn't give the impression that I was saying P25 used AFSK, or analog tones, to transmit the data. But, on a receiver, it will have the distinct analog component sounds as you can hear the various square waves as they average out. These can be heard at any of the audio sample websites. POCSAG is one of my favorites with the distinct sound. It is also unfortunately one of the dirtiest waveforms in use - at least with respect to the 80s technology used to transmit it.

I think we are saying the same thing. But, I see any shifting carrier as one that is modified with respect to the carrier frequency. If it were not modified, it would be a dead carrier. In other words, CW.

Yes. And "what's this noise?" Is comparable to someone asking "Why doesn't my radio work?" To which you can bet at least one response will be "Did you turn it on?"

A TV repairman once told me about calls he would go to... Parking the truck outside was automatically a $50 fee. When he asked what seemed to be the problem the reply was "I turn it on and... Nothing". The first thing he would look at was if it was plugged in. Nope. So instead of embarrassing the poor woman who had forgotten to plug the TV back in after she had used the outlet to vacuum, he would pull some tubes, reseat them and do a little house cleaning, after witch he would plug it back in, mutter "just a minor adjustment, you shouldn't have any problem now" and leave. He didn't have it in him to tell the lady she had just paid $50 to get someone to plug in her TV!

Wow thanks everyone for the detailed replies. I have to assume it was simplex, because at one point, I could only hear one side of the conversation. It's long enough gone now I feel comfortable posting the freq - it was 172.2125 . This was in Fremont, CA. RadioReference shows this as a FBI freq out of - I forget - Wisconsin? It definitely sounds federal, they were talking about a CI, and they were definitely tailing someone.

And it didn't happen on all transmissions - from the same person even. So perhaps it's only on a HT and not a mobile (or the other way around)?

Also be aware that you may have been hearing the initial data burst in this case because it was likely a simplex P25 transmission (yes P25 can do digital simplex). If so, then there was no control channel that had already told the scanner it needed to go to channel X and decode a digital transmission. So the scanner will hear the signal and once it gets enough data and the decoder sees it and tells the controller, hey this is a digital signal, it will then switch to the output of the decoder.

I would guess if you program the channel into the scanner and told it Digital Audio only you would not hear the data burst at the start.

Oh.Silly me. Guess I didn't think to look under County for nationwide :)

I don't see any FBI unless I'm missing it...

But also - the frequency I heard according to RR is like Wisconsin. So preferably, there should be a list of all FBI frequencies regardless of state /county, right?

Any other suggestions? This now seems to happen just about every 4th time I turn on the scanner. Maybe a ticket to Uniden support is in order.

2305. BCD536HP Nifty Mini Manual

Yahoo group: BCD536HP
Date: 2015-07-19 17:57:38 UTC
From: halhermanns@...
Topic: 2305 Message: 2305

Just purchased a new BCD536HP. I have only had it a few days, but have managed to install Sentinal, update firmware, etc. I really like the scanner, and it is performing well. My question is with the user manual. I find the user manual vague, and it does not seem to cover all of the features, unless I am missing something. Is there a better user manual? I see Universal Radio has the Nifty Mini manual for the 536, but, it's 24.95 plus shipping, so about 30.00 dollars. Is it worth purchasing? Or is there a better manual? Any comments are welcome. Thanks for your time.

Hal

Likely the best "manual" are forums like these where
you can ask (just about) anything and get an answer.

Hal,

There is this "Easier to Read" which is free. http://marksscanners.com/536/436_536.shtml
It's referenced on the Radioreference wiki page.

I use the Jiffy Mini-Manual, along with the free one I list above when I don't understand the Uniden manual. If I still don't get it, there is this group and RR Forums and Uniden support. Paul Opitz (Uniden Engineer) does look in on this group but does not field all questions. It's not an "Answer Man" role he plays here, where every question gets a response from him. But he does track threads relating to issues Uniden has a concern with and may add his presence to a particular thread. But even if it's an issue of concern to Uniden, if Paul Opitz has answered it once, he probably won't repost it. It's up to the users in the group to research first, if it's ever been discussed within the group. Most times, when someone new to the group posts a question already asked, another group member will field it without even mentioning it's in the archives, or you should have looked it up! (I remember dialing "information" on the telephone, asking what he number was for whatever, and the operator would give you the number... but not before first stating "That number is listed in your telephone book"

Mike,

The Nifty people and I are interested in where exactly the Nifty mini-manual can be found online free to download. (Or is it assumed it is... wish I had a nickel for every time I heard "Oh, I'm sure it's online somewhere") The Nifty stuff is copyrighted. That makes it illegal to post online where it can be downloaded for free. Copyright infringement comes with some stiff fines, and not just for the one who posted it online, those who download it can also get wacked.

As someone who knows something about Federal Oversight within the Interstate Commerce Commission and the extremes to which the Feds will go to protect copyrighted material in this day and age

You need a new SD card. Many on the Facebook Uniden Scanners group have had exactly the same problem and fixed it by replacing the SD card and going through the re-formatting, clear user data, sequence elsewhere described.

I understand it may not make sense but it's a cheap fix without the loss of scanner for weeks for a $10 investment.

Evan,

I'd suspect your vehicle power glitches it. Delaying power on after start would help, along with making sure the power source is ONLY to the scanner (not stereo, A/C, wipers etc., direct to the battery) would help (along with a large inline capacitor 'filter' to smooth bumpy power 'noise'). Turning on a high draw device (A/C is huge) may be dropping the supply (momentarily <11V?) enough to mess things up. There are other ways to power the scanner, such as a separate battery (makes charging it complex).

Yours seems to be sensitive or overheated in the console? Commonly not paid attention to by most, some forget the A/C vent is also a heater vent and consoles are often HOT. Forced air cooling is preferable.

In the meantime, I suggest that you get the proper in-dash mount from Uniden (a 'key' of thin flat stock, then slide it out).

Then when it is pulled for repair, after changing to the proper mount, next time is simpler and cheaper.

There is ALWAYS a next time. :-)

Hi Rick,

Thanks for the reply. It is on a separate battery. I have a second battery, connected to the main battery via a Charge Guard. It's left on for about an hour after I shut off the car, then power is cut to it. (I can extend that hour by pushing a button but rarely do). Then, when I turn the car on, the second battery is turned on and resumes charging from the primary battery.

I do have the in dash sleeve, however to get to the rear of the radio, or to the radio period, requires taking out a dash 'bezel'. The bezel covers the sides of the radio, and has connections to A/C and the hazard lights. I have a picture somewhere. It's a 5 minute job, but I'm not too comofortable yet with trying it in fear of breaking something :)

Exactly, most have another they can scavenge from an unused camera or MP3 player. I would use a Class 10 if possible.

:(well, I guess that's a reasonable idea... I don't really need anything big, right? ie 4 gb should be fine, and as fast as possible? Or any reason to buy something beyond 4 GB?

On Mon, Jul 20, 2015 at 9:39 AM, 'Dr. Mark Levine' wb2eqe@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

You need a new SD card. Many on the Facebook Uniden Scanners group have had exactly the same problem and fixed it by replacing the SD card and going through the re-formatting, clear user data, sequence elsewhere described.

I understand it may not make sense but it's a cheap fix without the loss of scanner for weeks for a $10 investment.

Subject: Re: [BCD536HP] 536 Oddity - won't power off

WiFi is off. It's in my car in a parking lot, either at home or work.

So I e-mailed Uniden support, without any asking of troubleshooting, they tell me I need to RMA it.

I'd prefer to wait until they have a clock battery fix, as it will cost me money TWICE to have the scanner disconnected, taken out, and then put back in :(I need to see if they'll do an advanced replacement

Not really, but 4 gb should hold ... shoot 10 hours or so, no?

Following earlier suggestions on this forum I replaced my OEM SD with an Ultra-Fast SD. That made a very big difference in the scan rate and thus the continuity of conversations. So - spend $20 while you are at it and perhaps fix two issues at once.

It should not affect scan rate at all. If it did,
it was due to settings changed in the scanner setup.

I think it would work, but even the class 10 isn't any faster than the stock card (at least not more than 10% faster - if that.

I think I calculated it to about 2 weeks of average use.

2325. WiFi low volume when connected to IPad-mini

Yahoo group: BCD536HP
Date: 2015-07-26 11:46:48 UTC
From: n1chu@...
Topic: 2325 Message: 2325

I noticed when the BCD536HP is connected via WiFi to my iPad-mini the max volume level is nowhere near what the iPad-mini is capable of. Watching a Utube video, by comparison, is much louder. Is there a setting or control I need to adjust? The radio volume setting has no bearing on the WiFi connection. Does the dongle have variable settings I can access?

Bill

2326. Re: [BCD536HP] WiFi low volume when connected to IPad-mini

The output of the wifi connection is fixed, no changes available. The volume is controlled at the device (iPhone/iPad/Android/Computer, I use all of those here).

So simply turn up the volume while using the Siren app. If that isn't enough, use a headset (it should be plenty).

Rick,

That kinda sucks... Using the WiFi dongle is for when you are running remotely... a given distance from the radio and any volume control available. So if, as you say, the only ability to increase the volume lies with the iPad, and the iPad can only work with what it gets, which isn't nearly enough, making us resort to earphones etc., it's not such a great hype when Uniden waved that big WiFi carrot under our noses exclaiming how we would be able to enjoy the audio, complete with alpha-numeric tagging on our smart phones anywhere in the world where we could acquire an Internet connection. (Which was the primary reason I got two of the 536's.) I'm still waiting on them to make good on that point-going on two years later. Currently, I see a very reduced portion of the original promise. I haven't seen any statement from Uniden lately. Can you tell me if they are still working the issue?

Thanks,

Bill

Yes they are working on it, albeit not fast enough for many. ;-)

I don't have any issues with the volume on my devices. So I don't understand completely. Remember that iOS keeps track of the volumes of each running app, so adjust while its in the foreground.

Connect your 536 to your LAN, not directly to your iPad. Your range will be better than direct.

You CAN broadcast beyond your LAN out to the Internet but it currently involves other hard/software. The 536 can only send audio to ONE device (CPU overhead is huge beyond that) so you have to use a computer to act as a repeater (multiple users on the control side is easy).

I've done the proof of concept (made it work outside my network) but haven't finished that project.

Hopefully Uniden will produce a complete support package first.

My end game: I want to control the scanner, then allow many listeners via a basic web page from the Internet, showing what channel is active. I have the tools, but lack the time to polish/massage it.

Worst case (if I never make the time), I can use Broadcastify for audio and control it via device (Siren).

I am using the WiFi in my vehicle. So the LAN idea isn't going to work. The iPad is mounted in the vehicle, a simple solution to getting a larger display, with the bonus of added color! But here's the thing... I can crank up the volume on the 536 while I'm in the vehicle. But I also take the iPad out of the vehicle, and, staying within range of the dongle, want to use it... trouble is, the volume is way too low... I would have to use another add-on such as a Bluetooth speaker coupled with a transmitter. But I will give the iOS another look.

I mentioned I have two 536's. The second one is in a carry bag made specifically for backpacking a comparable sized ham radio. With a (very light weight) lithium-ion battery from a company called Earth-X, (they make LI batteries for cars and motorcycles) and an amplified speaker, I have a pack radio with a power supply that lasts for days. The iPad sits in a holder that is attached to an adjustable magnetic stand. It "clamps" onto the metal radio case nicely. Of course, the lack of volume is not an issue in this configuration. I've considered suggestions such as using the amplified speaker on the vehicle's 536 but don't want to broadcast-it would be the same as a PA speaker horn. I've set my sights on an iPad WITH proper volume capabilities.

If the iPad also has Bluetooth I could take that low level audio and send it to a Bluetooth portable speaker. But I first need to see about Bluetooth in an iPad.

Thanks again,

Bill

Try a volume booster app on the iPad.

List of several: <http://appcrawlr.com/ios-apps/best-apps-volume-booster>

You think you have it tough - volume control for the iPad. What about us poor Android folks who have yet to see anything but promises regarding the Siren app?

Feed the iPad into the vehicle sound system. It works GREAT. It is what I do with the 436. Who needs tunes when you can listen to the local traffic as you travel...

Rick, WA6NHC

iPad = small keypad = typos = sorry ;-)

Yea, that android capable app is vaporware so far... Falls under the heading of "Promises, promises"....

When (one of) a product's main selling points fails to produce its not good for customers and manufacturers alike! And then, on top of that, promises to fix drag on for well over a year just adds insult to injury.

It's time for Mr. Opitz to post a progress report, or did I miss the latest?

Bill

Rick,

That kinda sucks... Using the WiFi dongle is for when you are running remotely... a given distance from the radio and any volume control available. So if, as you say, the only ability to increase the volume lies with the iPad, and the iPad can only work with what it gets, which isn't nearly enough, making us resort to earphones etc., it's not such a great hype when Uniden waved that big WiFi carrot under our noses exclaiming how we would be able to enjoy the audio, complete with alpha-numeric tagging on our smart phones anywhere in the world where we could acquire an Internet connection. (Which was the primary reason I got two of the 536's.) I'm still waiting on them to make good on that point-going on two years later. Currently, I see a very reduced portion of the original promise. I haven't seen any statement from Uniden lately. Can you tell me if they are still working the issue?

Thanks,

Bill

I've done that Rick. As you say, it does work great. But the radio volume is sufficient while in the vehicle, using an external speaker. I just mute the WiFi Siren app's volume and turn up the radio's volume. It's when I want to take the iPad out of the vehicle and need to depend only on the volume available coming from the iPad that concerns me. I am guessing Uniden has deliberately set the level coming from the dongle for the same reason they dummy down the earphone jack, due to concerns over causing accidental ear drum damage when the radio's volume is jacked all the way up and somebody neglects to turn it down before donning a headset or ear buds.

Bob,

...seems those apps only work with Bluetooth inputs... I tried one of the free apps with zero success. They instruct to first start listening to the music being pumped into the iPad and then opening up the volume booster app, go to settings, and incorporate that app. Since I'm using WiFi instead of Bluetooth I'm out of luck. Unless I'm doing something wrong?

Bill

Please note that last I checked, the Siren app still used the RINGER volume to adjust the volume level. So please make sure that is what you are changing. It's often easy to overlook that on an iPad.

And if my information is outdated, I apologize. I haven't checked that specific function lately.

Joe M.

2339. Re: [BCD536HP] WiFi low volume when connected to IPad-mini

Yahoo group: BCD536HP
Date: 2015-07-28 09:16:19 UTC
From: N1CHU
Topic: 2325 Message: 2339

Joe,

All other functions requiring audio function correctly. The WiFi audio from the 536 is not variable. Again, I'm guessing the maximum level sent from the WiFi dongle on the 536 is a deliberate action by Uniden to protect against external devices such as earphones, headphones, earbuds, etc. allowing excessive and possibly damaging audio levels to reach our ear drums. I don't blame Uniden for this... Recognizing situations that can come back at them in the form of product injury claims/lawsuits, and enacting safeguards is good business. On the other hand, Uniden developed a product, its primary intent, to broadcast visual and audio information to smartphones and iPads. That intent is not being accomplished. But as advertised, they make no mention of a need to use headphones or earbuds because the volume level is pre-set and not adjustable.

I see my only alternative at this stage of the game is to use a Bluetooth link from the external speaker output jack on the 536 to a portable Bluetooth external speaker.

Bill

2340. Re: [BCD536HP] WiFi low volume when connected to IPad-mini

Yahoo group: BCD536HP
Date: 2015-07-28 12:09:08 UTC
From: MCH
Topic: 2325 Message: 2340

Yes, but my point was that unless you are changing the ringer
volume on the device, the volume of the app won't change.

I understand that you're sayting the streaming
audio is a fixed level over the network.

2341. Re: [BCD536HP] WiFi low volume when connected to IPad-mini

Yahoo group: BCD536HP
Date: 2015-07-28 12:35:48 UTC
From: N1CHU
Topic: 2325 Message: 2341

Joe,

Ok... Adjusting the Ringer volume... Up until now, I have understood that to mean using the two buttons on the iPad-one increases volume and one decreases volume. But your understanding of the streaming audio being fixed caused me to further investigate. So I went into settings and selected "Sounds". There is a notation and a switch which allows for turning on or off the ability to use these buttons. It reads "The volume of the ringer and alerts can be adjusted with the volume buttons." I found my setting on, meaning I can inc/dec volume using the buttons. But at the bottom of this menu there was another on/off switch allowing for "Lock Sounds". I believe that is just for the different sounds available for various alerts and phone such as setting up my phone ringer to play a train whistle (for example) instead of the default sound. But I turned it off and will give it a try this morning. I will also experiment with any other iPad variables I find and let you know what my results are.

Thanks for sticking with it. It's appreciated,

Bill

2342. Re: [BCD536HP] WiFi low volume when connected to IPad-mini

Yahoo group: BCD536HP
Date: 2015-07-30 09:30:45 UTC
From: N1CHU
Topic: 2325 Message: 2342

Further investigating but No Joy so far. Actually, I'm giving up as my primary intent was to learn if there was some way of increasing volume from the WiFi source. I have my answer for that, which is no. I'm going to use an amplified Bluetooth speaker with the iPad. The dongle is doing what it's designed for, broadcasting the display info and audio. And the iPad has Bluetooth so a cheap Bluetooth amplified speaker (instead of stealing my wife's Bluetooth speaker she uses with her iTunes on her iPhone at the beach or backyard deck) should satisfy my needs.

To think, 20 years ago, I wouldn't be discussing this. Makes me wonder what I'd be doing with my time instead? Probably wondering if I should upgrade my scanner with one that sported PL, DPL!

Thanks again for the help Joe... And all others that have contributed. I'd like to close out this thread.

Bill

2343. Priority Scan Issue

Yahoo group: BCD536HP
Date: 2015-07-31 09:40:15 UTC
From: N1CHU
Topic: 2343 Message: 2343

Can't get either 436 or 536 to priority scan. I've set up the channel to be a priority channel and turned on the priority scan feature... Menu, Select Favorites, scroll to the FL and select it, Review/Edit System, Select System, Edit Department, Edit Channel, Set Priority. Back out to Menu, Priority Scan, Set Priority, choose Priority Scan. Back out all the way and scanner scans. I have set the interval to 1 second, 2 seconds but no joy. Max Channel/Pri-Scan is set to 10.

As I have had no luck with either of the two 536's and the one 436. Since I experience the absence of Priority Scan on all 3 radios, I expect the error is mine, and not the radio. Especially when I have all three radios using the same data. I use ARC Butel after-market software to program and have all three SD cards programmed identically.

Bill

Are you trying to scan trunked channels or conventional?

Trunked is set in the menu, not the Priority function on the keypad.

Joe,

I'm trying to priority scan both trunked and conventional. But currently only have two conventional channels set for priority. I have noticed that when scanning the radio will look for "set" priority channels but I was not aware of this default setting for trunked. And that is probably why I don't get it stopping on the two conventional channels I have priority activated. How do I change the default setting?

... Haven't found the Trunked Systems Options yet... Will look after I mention some additional... It may be that it will change your advice as to what to look for next;

I identified the PRI keypad button and its 3 settings... Off, PRI, and reverse PRI, denoted by the display showing PRI in either a black background, where the letters are white, or the other PRI setting where there is no black background, the letters are black. The manual says in order to priority scan the conventional channels, it needs to display the letters in black. Figuring that must be where you want me to go, I haven't bothered looking for the Trunked Systems Options as yet...?

2350. Re: [BCD536HP] Re: [BCD436HP] Priority Scan Issue

Yahoo group: BCD536HP
Date: 2015-08-03 18:18:36 UTC
From: N1CHU
Topic: 2344 Message: 2350

Ok. That's what I'm trying to control. But it shows 3 settings. If it only controls conventional then why two other settings? It should only be one other setting... Off (or Trunked, the default setting), why 3?

On Aug 3, 2015, at 2:02 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

The PRI keypad button only controls Conventional priority.

The conventional Priority has 3 modes. But, if it is trunked you want to enable, that is done with the keypresses I posted, not the PRI button.

2352. Re: [BCD536HP] Re: [BCD436HP] Priority Scan Issue

Yahoo group: BCD536HP
Date: 2015-08-03 18:48:42 UTC
From: N1CHU
Topic: 2344 Message: 2352

Well, regardless of where I set all setting, I'm not getting the PRI to work. I have not tried it on a trunked system yet-don't have any interest in prioritizing any of my trunked stuff.

The manual doesn't do a good job explaining PRI, which surprises me because I was under the impression priority scanning only applied to conventional channels in the beginning, only afterwards including trunked talk groups. So it should be a selling point, something they should be beaming about and better explained in the manual.

This is really helpful - thanks.
Question - once having set as you describe is there a symbol that appears on the display indicating that Priority is ON?

Yes. The indicator is "PRI". It is either white lettered or black lettered, depends t upon which mode you are in. When priority is off, there is nothing showing.

From: N1CHU
Topic: 2344 Message: 2356

Joe,

I'm done. Thanks for you guidance. It's not worth further effort. I intend on contacting Uniden with a request for something more concise than what they thought would pass for acceptable in their manual. Setting up a priority scan should be child's play with the straight forward step-by-step explanation stated in the manual.

The WiFi screwup comes in as #1 on the hit parade, followed by their manual, a close second.

I feel they rushed the BCDx36HP series. And for what? To beat out GRE? When they went out of business and sold out to Whistler, causing further delay in any real competition?

I've a suspicion it won't be long before China does to the scanner market what they are currently doing to the Amateur Radio market. A dual band mobile is less than half the cost of the offerings from the big 3 established manufacturers.

Uniden can forget about any future orders from me. I've had it with their loss of product reliability. When you consider the most probable fact they will finally catch up and turn the x36 series into solid units, it a shame they came to market with promises they knew they needed more time to make happen. And if coming to market early was in an attempt to gain market share, it blew up in their face. Because this royal SNAFU is not viewed as a favorable marketing ploy. Bottom line, first and foremost, it's imperative a company treats the interests of the customer as if it were a lifeline.

On Aug 3, 2015, at 5:23 PM, N1CHU n1chu@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Yes. The indicator is "PRI". It is either white lettered or black lettered, depends t upon which mode you are in. When priority is off, there is nothing showing.

On Aug 3, 2015, at 2:35 PM, Jim Stein jdstei3@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

This is really helpful - thanks.

Question - once having set as you describe is there a symbol that appears on the display indicating that Priority is ON?

MENU
MANAGE FAVORITES
(select FL)
REVIEW/EDIT SYSTEM

(select system)
EDIT SYS OPTION
PRIORITY ID SCAN
select ON for that setting

2357. Attn Paul: Any update on the RTC issue?

Yahoo group: BCD536HP
Date: 2015-08-03 21:46:03 UTC
From: Evan Platt
Topic: 2357 Message: 2357

So I have a 536. It's now half the time failing to power up - it 'freezes' at the screen with my custom welcome menu.

I submitted a help ticket, and was told I'd need to send my scanner in. Easier said than done as I'd need to have it uninstalled from my car by the shop that installed it.

Is there any fix on the horizon for the RTC failure? Would rather kill 2 birds with one stone and have BOTH fixed at the same time. And better yet, is advance replacement available so I only have to take the car to the shop once?

2358. Can't get Uniden Siren App to Connect

Yahoo group: BCD536HP
Date: 2015-08-03 21:52:56 UTC
From: ka0hql@...
Topic: 2358 Message: 2358

Hello all, I am a new user to the group.

I just purchased a BHP536, and was impressed with how easy it was to immediately hear everything going on in my area.

I am however, very disappointed that they advertise the scanner as being able to be controlled via the Apple App "Siren" via wifi, when everywhere I read, there are problems. Even the customer feedback on the ITunes website shows this app is not working as it should.

Does anyone have any advice?

I have undated the firmware. My WiFi dongle is version 7.28. I am connected to my router. When i type in the IP address of the scanner, I get a confirmation "I am scanner called UB375Z." I type in the correct IP address into the Siren App, but it does not connect. As I see on the ITunes feedback, I am not alone with this problem

My request for assistance from Uniden ended up a with a simple note back "it works" ....thanks for the great help Uniden!

Any ideas out there?

Thanks,
Respectfully,
Mike

That would be a matter of setting the channel as a Priority channel and
using the PRI button. I don't know where I got the trunked part from.

2360. Re: [BCD536HP] Re: [BCD436HP] Priority Scan Issue

Yahoo group: BCD536HP
Date: 2015-08-04 00:42:38 UTC
From: MCH
Topic: 2344 Message: 2360

I will merely point out that while there are issues with the newer technology features of the x36 series, Uniden has put out three scanners since then that already have a very good reputation. Specifically, the HP-2, the BCD996P2, and the BCD325P2. While those are not high end models, and were built on the HP-1 and XT series, they still offer P25 Phase II and are CEC compliant.

As for the WiFi "screwup", Uniden had no control over that. That is very well documented.

Replace the SD card and the issue will likely be solved.

No, no permanent fix for the RTC issue yet AFAIK.

How are you seeing the message "I am scanner called UB375Z."???

Are you using WEP or WPA? (you need to use WPA)

Yep, replaced the card, brand new SD card. Same problem.

Did you format the card for FAT32? Did you then perform
the CLEAR USER DATA on it and write your profile?

It could be a CPU issue which would be a Uniden repair.

Also check the supply voltage, and maybe
the AC component on the 12V feed.

From: N1CHU
Topic: 2344 Message: 2365

Joe, I don't care.

And TDMA upgrades (uh, duh... big deal) done on radios that pre-dated the x36's aside, telling me the WiFi boondoggle is not Uniden's fault, that this is a documented fact (just who the hell "documented" what?) is about as much crap as I can stomach.

You see, I don't care if it's proven beyond a doubt that someone else advertised the WiFi capabilities, and it was someone else that promised it in a months time, and again, it was someone else who continued to promise only to break that promise. Because it doesn't matter who did all that... Uniden is going to get the blame for ALL of it. And rightfully so. I'm also beginning to wonder about Mr. Opitz... When's the last time anyone has heard from him? Or was he cashiered over this major screwup?

Please do not try to defend Uniden to me. I've been around way too long not to see it for what it is. If it quacks like a duck, walks like a duck... It's a duck!

I will continue to enjoy the 3 radios (awaiting promised improvements) and thank you again for the help. I do enjoy seeing you field the questions and providing help to others. You've got my vote for Most Active Helpful Member of the Group. Please keep up the good work.

Bill

On Aug 3, 2015, at 8:42 PM, MCH mch@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

I will merely point out that while there are issues with the newer
technology features of the x36 series, Uniden has put out three scanners
since then that already have a very good reputation. Specifically, the
HP-2, the BCD996P2, and the BCD325P2. While those are not high end
models, and were built on the HP-1 and XT series, they still offer P25
Phase II and are CEC compliant.

As for the WiFi "screwup", Uniden had no control
over that. That is very well documented.

2366. Re: Can't get Uniden Siren App to Connect

Yahoo group: BCD536HP
Date: 2015-08-04 01:41:20 UTC
From: N1CHU
Topic: 2358 Message: 2366

Original promises seem to have become vaporware. It's upset a bunch of people, rightfully so. I bought 2 of the 536's just for that advertised ability and am still waiting almost 2 years later. The is a group who have expressed an interest in holding Uniden's feet to the fire, threatening lawsuit-you should be able to find them on the web. There are other quirks to be worked out but what you got from Uniden when you inquired says it all. They screwed up in a major way and then try to tell everyone it's not their fault! What Gaul!

Bill

Have you set the scanner for Infrastructure or AP mode?

It makes quite a difference.

I don't think it would work, but wanted to confirm that it was FAT32.
Also just trying to troubleshoot the symptoms.

Have you set the scanner for Infrastructure or AP mode?
It makes quite a difference.

On Aug 3, 2015, at 17:52, ka0hql@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

Hello all, I am a new user to the group.
I just purchased a BHP536, and was impressed with how easy it was to immediately hear everything going on in my area.
I am however, very disappointed that they advertise the scanner as being able to be controlled via the Apple App "Siren" via wifi, when everywhere I read, there are problems. Even the customer feedback on the ITunes website shows this app is not working as it should.
Does anyone have any advice?
I have undated the firmware. My WiFi dongle is version 7.28. I am connected to my router. When i type in the IP address of the scanner, I get a confirmation "I am scanner called UB375Z." I type in the correct IP address into the Siren App, but it does not connect. As I see on the ITunes feedback, I am not alone with this problem
My request for assistance from Uniden ended up a with a simple note back "it works"
....thanks for the great help Uniden!
Any ideas out there?
Thanks, Respectfully,Mike

I enjoy both the 536 every day but I don't mess with the WiFi at all. Have had mine over a year with no problems. It's an amazing machine and does way more than I need but it's great in case I ever want to explore.

Leonard,

If you haven't already checked, this site may be of help. Go to Radioreference.com and click "Forums" in the main title bar. Scroll down to "U.S. Regional Radio Discussion Forums" where you will see a Maryland forum.

Most of the Carroll County is still operating on Phase I. The Sheriff, Westminster PD, and STate Police are all Phase I and nothing is encrypted.

The County Detention Center, Roads, and Public Works are on Phase II.

It appears that other than Westminster, policing is performed by the Sheriff or State Police. Having spent some time in Union Bridge and Taneytown, that seems about right.

Did you post your questions there Leonard? Those are the guys in the know. And if it's a statewide system, the specific county shouldn't matter all that much. I seem to remember learning about different systems from the notations within these state forums. They kept me updated on the build-outs of new trunked systems and other info about encryption for example in the states I drove through from Ct. to Fla. on I-95.

hello group thank you for your replies. i presently have a bcd 996xt and had received carroll county md before they switched and now i can only hear the fire alerts no police. if the police can still be heard i have tried broadcastify and that is listed as digital cannot receive anything analog on broadcastify.do not really like broadcastify because it will stop working after a period of time. i guess i will have to get a 536hp if i want to listen to carroll county md.
Leonard

Well, of course a 996xt won't pick up phase-II P25. It's TDMA and the 996xt doesn't have the hardware to decode that type of P25.

Leonard's original question was based upon his spending a chunk of change on a Phase II capable scanner, worried to learn encryption was or is implemented on the systems he wishes to monitor. That question has been answered by those in the know (people currently listening to the county comms). Encryption does not seem likely at this time. But just because encryption is not being implemented today does not mean it won't be tomorrow. From what I have gathered so far from the posts here, the county in question has not fully spun up to the new county/state available systems being built out, and his current scanner should suffice for the short future. But Motorola Phase II (TDMA) systems are compatible and service both FDMA and TDMA. Meaning as the older P25 (FDMA) radio gear comes due for replacement, newer Phase II gear will be installed. Eventually, the entire system will be Phase II. And encryption will be an available option. How do you keep encryption out of the picture depends upon what the system owners want, and input from those they serve. We all know about the advantages and disadvantages of encryption. If the system owners do not see a need, then fine. But those owners grow old, retire, and someone else is now running the show. What are the new owners feelings on the matter? I advocate the scanning public getting involved with our public servants, learning of expected needs down the road, setting up review boards if need be. Anything that would help both sides of an encryption debate come to agreeable expectations for all. Yes, there are times sensitive information needs to be broadcast over the net when other modes of communications won't do, such as MDT's or cell phones. And there are the other transmissions (the majority of comms) that work better for the first responders when left unencrypted, allowing for constructive input from the public (relating to something heard on their scanner).

Each locality is different, with specific needs and concerns. This drives a need by us, the scanning community, to have open lines of communications with the services we listen to.

Leonard probably has nothing to worry about, his purchasing a Phase II capable radio. And shouldn't be disappointed by the services he listens to going forward. That said, it's also important to protect any investment in new scanner technology. To that end, I check the applications for new/renewed licenses at the FCC website on a weekly basis. My local is currently comprised of VHF High Band/UHF repeater stuff. The minute I see applications for a trunked system (the most logical direction in which my local would migrate to) I'm getting involved. Not to voice objection, but to learn as much as possible what will be expected of a new multi- million dollar buildout. Why it's needed, are the needs justified, can we afford it, and last but not least, will I be able to hear it? THEN I express any objections I may have!

As someone who was instrumental in the acquisition of a new conventional VHF High Band Repeater system for the local FD when I learned they were about to spend a hundred thousand dollars to install numerous mobile repeater's which would allow the portable radios to reach dispatch (on a VHF Low Band non-repeater system) I interceded. The radio supplier was asked to fix these low band weak signal concerns on the cheap. Barring a multi-million trunked system buildout, the mobile repeater's were the only option left to us, or so they thought. No one had any idea of other options available, such as what I suggested. Using excuses such as no available frequencies in the VHF High Band, so we needed to go trunked, were false. The frequencies were available if they knew where to find them. The town had no

knowledgable advocate working for them and the radio supplier was doing what they do best, making money!

I didn't have to buy a new 800 MHz capable scanner, and the FD now had a bang-up radio system... For the same cost as all those mobile repeater's they thought they had to by. (I upgraded my stuff anyway. The future was becoming obvious as other towns and the state moved into trunking. Made me wonder how many were sucked in relating to the unavailability of frequencies and coming interoperability needs. Especially, where the FD's were concerned-the entire state, comprised mostly of volunteer FD's, with mutual aid comms (STOCS) already in place.)

Ok, I'm off subject AND long winded! So shoot me.

Just sayin...

Bill

True. But I see Uniden has come out with their newest version of the BCD996XT which is now Phase II capable.

Interesting, the differences between FDMA and TDMA... The pros and cons... Looks like FDMA is or will become a thing of the past.

(I upgraded my stuff anyway. The future was becoming obvious as other towns and the state moved into trunking. Made me wonder how many were sucked in relating to the unavailability of frequencies and coming interoperability needs. Especially, where the FD's were concerned-the entire state, comprised mostly of volunteer FD's, with mutual aid comms (STOCS) already in place.)

hello group thank you for your replies.to the best of my knowledge carroll county maryland is p25 phase 2.presently i have arcxt pro to program my bcd996xt for which i feel is not comparable with programming a phase 2 radio. i looked at the scanner master hyper link and i am aware of the 996xtp2. i am vision impaired so i do have some difficulty working with programming a scanner

Your posts are coming through on the BCD996p2 group ok. Sign in to Yahoo groups then the 996p2 group and see what type of email you checked. Choices such as individual emails, daily digest, NO mail etc.

The ARC Butel programming software for the BCD996XT, according to Butel's site, will work with the new BCD996P2. When you open the program, check for updates (if you don't have the option in the program automatically checking each time you open it). There may be an update available or not, depending on if there needs to be recognition for the Phase II version of the radio. If I had to guess, I'd say no. As the software might not need to differentiate between the two for programming purposes.

Mark what's wrong with the built in recorder? Works flawlessly only records when receiving transmissions and when you download the files to your PC off your card can be easily organize. Guess you can plug a recorder into back speaker jack might have a lot of dead air in between transmissions even if it is voice activated as there's a little low noise coming out of the jack keeping it recording.

One option to consider is ARC536PRO. It works wonderfully, has excellent file naming conventions, and the part I like best, allows you to review files and recordings while continuing to monitor and record. In this context the radio stays connected to your PC and once the .wav files are on the PC you can do whatever you want with them.

It's truly set it and forget it. I leave mine on for weeks at a time and if something worth knowing about happens, it's there with everything else but easy to find. I've been lazy about housekeeping so since the first of the year there are 377,431 files taking up 65gb worth of disc space. On a 1tb disc I can be lazy. When I get around to it, it will be almost as easy to reverse my hoarder tendencies and delete all of the files and sub-directories with a couple of clicks on the main directory (folder for you kids).

Editing correction;
Before someone jumps on the obvious...

Should read "recording feature", not "recording option". Recording abilities are not an option when buying the radio. It is included as one of the features. The only option I see is with us having the option of utilizing or not utilizing the recording feature.

The Fort Worth Regional Radio System should already be in the scanner if you've got a recent update from Uniden. The system is in transition and, depending on how the local admins are getting their info, could be quite a bit behind the current state of reality. The last update was September 5, 2015.

It's a P25 Phase-II (TDMA) system with several small sites with simulcast frequencies no more than 1-2 miles apart. If they implement it in the most efficient manner, only audio calls to and from the dispatcher and unit to unit for users registered in a particular cell zone will be heard. Due to the nature of digital communication in a simulcast system (multiple small cells on identical frequencies) you must only have good reception from ONE cell site at a time or the radio will stop but hear nothing. This is also a problem for the users of the system but their 5-7 thousand dollar radios are much better at dealing with simulcast than our $500 scanners.

BUT - and here's the big one - Almost all of the Ft. Worth police talkgroups (except interoperability and special events ones) are ENCRYPTED. There is no scanner (nor can there be by federal law) which will decrypt these audio transmissions. Sorry but you're out of luck with the new Ft. Worth police system.

Fire, DPW, Ambulance and some outlying towns are unencrypted but Ft. Worth PD is a black hole of encrypted talkgroups. If marked in the database at RadioReference.com as "encrypted", the data file from Uniden won't even include the encrypted talkgroups.

So you could, conceivably, add the talkgroups - but you'd still hear nothing but an occasional buzzing.

Bob - KB1VUA
RR db admin (Massachusetts)

Bob,

You wrote "If marked in the database at RadioReference.com as "encrypted", the data file from Uniden won't even include the encrypted talkgroups."

On the RR site I see talkgroups listed for North, South, etc., which include the other than interop and special events stuff. So I'm wondering about the non-inclusion of encrypted talk groups. They seem to be there. I must have read or taken out of context, your point. And I'm having trouble when I look for the encryption notation... where on the RR database should I look to determine if an agency is encrypted?

Thanks,

Bill

Bob,

I noticed what you are saying about encrypted talkgroups not being listed by checking RR database for New Britain, Ct. It's in Hartford County. Checking the current listing for New Britain against one that I pulled down when I first heard they had moved to a Phase II system revealed that list has now been edited. Previously, the encrypted PD talkgroups were listed. Just as I see the Ft. Worth PD listed.

Nowhere (New Britain) did I see any notation of encryption. A partial encryption is practiced. FD is in the clear. Is omitting the encrypted PD talkgroups the notation in itself? If not, i must not be looking in the right spot. I believe New Britain had encryption for police channels on their previous phase I system so their new phase II system didn't come as any real surprise.

Speaking of phase two, I'm wondering how the scanner receives two conversations that take place simultaneously (almost) on the same frequency. . I know how TDMA works, and the advantages over Frequency Division Multiple Access... guess I'm really just looking for validation, my thinking the scanner is only going to be able to monitor one conversation at a time. Does that sound correct to you?

Bill

While encrypted talkgroups are included in the RadioReference.com database, they are filtered out of the data distributed by Uniden which Sentinel uses to update the scanner's databases. So, in theory, anything marked in the RR database with a "E" will NOT appear in the Uniden/Sentinel database. There apparently have been exceptions but as far as I know that's what Uniden's data massaging does after it downloads the raw data on Sunday night. It culls everything that scanner's cannot receive like NXDN, IDEN, Yaesu-s System Fusion and MotoTRBO channels.

New Britain Connecticut's RR database entry for the Police Department

Police Talkgroups

DEC HEX Mode Alpha Tag Description Tag 1001 3e9 T Patrol 1 Patrol 1 Law Dispatch 1003 3eb T Patrol 2 Patrol 2 Law Dispatch 1002 3ea T Traffic Traffic Law Tac 1004 3ec T Police Info NCIC/Police Info Law Tac 1005 3ed T Supervisors Supervisors Law Tac 1008 3f0 E PD Enc Vice Law Talk 1009 3f1 D Training Training Law Talk 1010 3f2 T Investigatns Investigations Law Tac

The Mode column tells you what mode of modulation is in use. Most are listed as T which is TDMA. One is listed as E which is the flag for full-time encryption and should not appear in the scanner's database (from what I think I know about Uniden's data-processing and massaging). Another is listed as D which is a regular Phase I non-TDMA digital talkgroup. It WILL appear in the database of the scanner.

Looking at the latest update of Uniden's data in Sentinel it appear that, currently, the encrypted channels ARE being downloaded and distributed to Uniden scanner users. So it appears my initial assertion that those marked with an E are not downloaded is wrong.

Since the scanner will still lock on the talkgroup but will not emit any audio unless it's in fringe areas where you may get an occasional squawk or buzz, it appears Uniden is NOT dealing with encryption properly. They should NOT be sent to the scanners at all because all they do is lock on the channel with no audio. The scanner doesn't skip them - it hangs there as long as there's encrypted audio present. Not a good way of doing it IMHO.

Uniden should respect the database admin's "E" or "X" mode flags and not download it to scanners which cannot receive the audio. I believe the database format may still be in a state of flux. There is no mode flag for MotoTRBO or other common and non-scannable protocols (yet). As far as I know, only the AOR AR-DV1 SDR Digital Voice Receiver will decode the other digital formats other than P25.

I bet Uniden is having fits over this...

Bob,

My bad. I'm confusing what Uniden offers as opposed to RR. Although my previous post (I have sent you 3 including this one) looks like RR may be practicing this same omission of encrypted talkgroups. A check of the city of New Britain, Ct., Hartford County will show no encrypted TG's, when not too long ago, that listing was all inclusive, meaning encrypted TG's were there to see. Ya couldn't hear anything worth a damn but what the heck, if you are inclined, and you have some extra cash to throw at a phase II scanner, you can still dedicate a scanner to sit on that all important encrypted frequency or talkgroup just to monitor the activity. When the frequency of uses become very active, you know something is up. It's at this point the scanning adventure takes on a whole new meaning. Remembering the detective work we did in the early days predating publications such as Monitoring Times and of course, RR... of monitoring where there were no frequency listings we knew of? There are other reliable sources, some easy (extra chatter in PD that relate to a structure fire with people in need of rescue will be broadcast shortly on the FD talkgroup. The harder incidents will take a it more info gathering. One bit of info that would be nice to have is who is doing the talking-that would be the talkgroup. You may not know WHAT they are saying but you do know WHO is doing all that saying. Another question is if the unit ID's are transmitted in the clear or as part of the encrypted packets? I doubt it but do not know.

Thanks for the explanation. I knew it was me that just wasn't getting it-a senior moment...

Bill

While encrypted talkgroups are included in the RadioReference.com database, they are filtered out of the data distributed by Uniden which Sentinel uses to update the scanner's databases. So, in theory, anything marked in the RR database with a "E" will NOT appear in the Uniden/Sentinel database. There apparently have been exceptions but as far as I know that's what Uniden's data massaging does after it downloads the raw data on Sunday night. It culls everything that scanner's cannot receive like NXDN, IDEN, Yaesu-s System Fusion and MotoTRBO channels.

It was my understanding that the P25 data stream itself has a bit that is set when encrypted; further that a scanner by firmware will ignore that stream when the encrypt bit was set. If so, it matters not what mode they use at all or what is downloaded (other than consuming a small amount of storage space for that talkgroup). If the bit is set, no audio (or scanner halt) should occur but it should scan merrily along, ignoring that stream.

Otherwise the Uniden software would have to build a logic tree for each possible scanner it attaches to, each time it's run. Not a huge issue, but if the bit set stream is ignored correctly by the scanner firmware, pointless.

You might bump into the law then. Paraphrased (I can look it up): what is encrypted may not be decrypted by uninvolved parties. Even hearing the noise could be construed as an attempt to decrypt, so it should be ignored (only) if the bit is set. That is the safest (legal) position but doesn't stop someone that decides to program all virtual channels for a system and scan them (they'd hear noise, even if they could decode P25).

I'd also rather have them in the scanner so if there was a wide area situation (disaster) and outside agencies provided mutual aid using the magic backdoor key to get into the system (interop ability) there would be a strong likelyhood that encryption would be set off in that case (can't share the encryption key). Or they could simply use interop talkgroups... hard to say.

Yes, I believe the law does state it is illegal to listen the the unintelligible transmission event. But I am not inclined to even consider a law enacted solely due to Newt Gengras getting an old analogue cell phone intercepted. He got embarrassed and the knee-jerk reaction was a law that didn't mean anything due to cell phones going to a mode that scanners weren't designed to tap into anyway. The whole thing is a debatable freak show which I don't care to bother with... I pay the new law no attention. Because there is nothing in it that concerns me. Since I do none of the stuff they say I can't do, there is nothing that affects me. In my case, they wasted a lot of time writing a law. It makes about as much sense as a law prohibiting me from wing walking on the space shuttle while in flight! Suffice to say my bible is the FCC Communications Act of 1934 which states, roughly translated, it is illegal to use anything which you hear over the air, transmitted in the clear, in any effort to aid in illegal activities by yourself or anyone else. And I am careful about blaring my scanner audio at the scene of an accident. As Hipaa laws state, your medical history is nobody's business but yours. It's guarded closely. That is until you are interviewed by a paramedic or EMT in the back of an ambulance. They pass that medical history along to the receiving hospital via open channel Med frequencies. My playing "Look at me, I've got the edge on the action" does nothing to promote the hobby. Just the opposite, they will pass another law and/or encrypt the Med channels. I bought my scanners because I wanted to know what that Chief was saying, for my own interests, not allow others to know unless it turns into a safety issue. Besides, let them buy their own scanner. They can get as nosy as they want then. There is a deliberate and definite scanner educate that must be followed. There are ignorant (not stupid, just ignorant of the ramifications) children with scanners getting into all sorts of trouble because they just don't know any better. And grown ups thinking a scanner gives them some sort of authority, or worse, an edge on the cops, a license to steal.

In my case, I'm. Retired 35 year Fire Captain and the first EMT in my community FD. Old habits die hard. We did not reveal patient information then and I still do not today. You hold a lot of secrets about friends and neighbors simply because you needed to know in order to help at one time or another. Taking it to the grave is a sacred trust.

Sorry abt long windedness, thanks again,

Bill

It's a moot point (MUTE point?) as no scanner can technically decrypt
any encrypted transmission. So as long as the data is accurate, why
include data that will never be usable and just takes up space?

RR does need something to separate partial encryption from full
encryption. That may be the core issue involved here.

New Britain PD Patrol-1 is only partially encrypted. As I recall, Dispatch is encrypted while the mobile/HT's are not or vice versa. The TGs, at last I tested, did get downloaded into the TDMA capable scanners. Unfortunately the scanners could not mute the encrypted transmissions.

New Britain Connecticut's RR database entry for the Police Department

Police Talkgroups

DEC HEX Mode Alpha Tag Description Tag
1001 3e9 T Patrol 1 Patrol 1 Law Dispatch
1003 3eb T Patrol 2 Patrol 2 Law Dispatch
1002 3ea T Traffic Traffic Law Tac
1004 3ec T Police Info NCIC/Police Info Law Tac
1005 3ed T Supervisors Supervisors Law Tac
1008 3f0 E PD Enc Vice Law Talk
1009 3f1 D Training Training Law Talk
1010 3f2 T Investigatns Investigations Law Tac

The Mode column tells you what mode of modulation is in use. Most are listed as T which is TDMA. One is listed as E which is the flag for full-time encryption and should not appear in the scanner's database (from what I think I know about Uniden's data-processing and massaging). Another is listed as D which is a regular Phase I non-TDMA digital talkgroup. It WILL appear in the database of the scanner.

Looking at the latest update of Uniden's data in Sentinel it appear that, currently, the encrypted channels ARE being downloaded and distributed to Uniden scanner users. So it appears my initial assertion that those marked with an E are not downloaded is wrong.

Since the scanner will still lock on the talkgroup but will not emit any audio unless it's in fringe areas where you may get an occasional squawk or buzz, it appears Uniden is NOT dealing with encryption properly. They should NOT be sent to the scanners at all because all they do is lock on the channel with no audio. The scanner doesn't skip them - it hangs there as long as there's encrypted audio present. Not a good way of doing it IMHO.

Uniden should respect the database admin's "E" or "X" mode flags and not download it to scanners which cannot receive the audio. I believe the database format may still be in a state of flux. There is no mode flag for MotoTRBO or other common and non-scannable protocols (yet). As far as I know, only the AOR AR-DV1 SDR Digital Voice Receiver will decode the other digital formats other than P25.

I bet Uniden is having fits over this...

Not debating this statement, but it is known that one of the problems with the x36 series is that they do NOT ignore encrypted channels on systems that are in the 700 band and true Phase II. The DC PD system (http://www.radioreference.com/apps/db/?sid=7508) meets the 700 MHz Phase II, and the encrypted police channels are downloaded into Sentinel, and will drive you crazy since they are not skipped. I have read where someone else has this same problem with a different jurisdiction.

Dewey

It makes about as much sense as a law prohibiting me from wing walking on the space shuttle while in flight! Suffice to say my bible is the FCC Communications Act of 1934 which states, roughly translated, it is illegal to use anything which you hear over the air, transmitted in the clear, in any effort to aid in illegal activities by yourself or anyone else. And I am careful about blaring my scanner audio at the scene of an accident. As Hipaa laws state, your medical history is nobody's business but yours. It's guarded closely. That is until you are interviewed by a paramedic or EMT in the back of an ambulance. They pass that

medical history along to the receiving hospital via open channel Med frequencies. My playing "Look at me, I've got the edge on the action" does nothing to promote the hobby. Just the opposite, they will pass another law and/or encrypt the Med channels. I bought my scanners because I wanted to know what that Chief was saying, for my own interests, not allow others to know unless it turns into a safety issue. Besides, let them buy their own scanner. They can get as nosy as they want then. There is a deliberate and definite scanner educate that must be followed. There are ignorant (not stupid, just ignorant of the ramifications) children with scanners getting into all sorts of trouble because they just don't know any better. And grown ups thinking a scanner gives them some sort of authority, or worse, an edge on the cops, a license to steal.
>
> In my case, I'm. Retired 35 year Fire Captain and the first EMT in my community FD. Old habits die hard. We did not reveal patient information then and I still do not today. You hold a lot of secrets about friends and neighbors simply because you needed to know in order to help at one time or another. Taking it to the grave is a sacred trust.

> You might bump into the law then. Paraphrased (I can look it up): what is encrypted may not be decrypted by uninvolved parties. Even hearing the noise could be construed as an attempt to decrypt, so it should be ignored (only) if the bit is set. That is the safest (legal) position but doesn't stop someone that decides to program all virtual channels for a system and scan them (they'd hear noise, even if they could decode P25).
>
> I'd also rather have them in the scanner so if there was a wide area situation (disaster) and outside agencies provided mutual aid using the magic backdoor key to get into the system (interop ability) there would be a strong likelyhood that encryption would be set off in that case (can't share the encryption key). Or they could simply use interop talkgroups... hard to say.

There is no mode flag for MotoTRBO or other common and non-scannable protocols (yet). As far as I know, only the AOR AR-DV1 SDR Digital Voice Receiver will decode the other digital formats other than P25.

Why does it have to be external? Why not use the built-in recording?

From: theoldcop@...
Topic: 2423 Message: 2423

I just performed a download of the newest version of ARC536 PRO (for my 436) and I am having a problem with the audio or channel capture time . When in serial mode and running VC the scanner will stop on a talk group but will only hold the group for a fraction of a second. If I disconnect the radio from the PC, the scanner returns to normal operation.
Version 0.98, Build 2. No other programs running at the time.
Windows 10, HP notebook w/ AMD -8 processor, 8gig RAM, Radeon HD Graphics
Thanks in advance for any help you might be able to provide.
John

John,

Sounds like there could be a problem with ARC PRO. Have you emailed them yet? I also run Windows 10, ARC536PRO and will try to duplicate your findings today. I will post back to you here on what I find.

Thank you Bill. Unfortunately I made an error in my narrative. It is my 436 that is giving me the issue. After numerous attempts to figure out what is going on, my SD card gave up the ghost. Now I have to figure out which came first, the decking health of the SD card or an issue with the software.

I reformatted a new card via SDformatter4 , so we'll what happens. Running fem now.

This was incredibly frustrating because I had just finished changing the alert light notifications for dozens of talk groups (NC Viper)!!!!

I had it backed up on two computers. The laptop mentioned in the first post and a Surface 3 tablet. The database on the laptop went belly up on the laptop, which is where I had made the changes. I find it incredibly easier to make bulk changes via ARC. My backup disappeared and my 436 went into the “Clear user data” mode. I was able to restore my FL via the tablet without the changes.

2428. FOR SALE - BCD536HP

Yahoo group: BCD536HP
Date: 2015-09-28 11:23:40 UTC
From: ke5ubf@...
Topic: 2428 Message: 2428

All..
After careful consideration, I'm deciding to sell my BCD536HP. It has served me well, sitting on my desk in a smoke free home, but I'm finding that I use my BCD436HP a lot more than the 536, so.. it's up for sale.

Includes the AD adapter, Wireless dongle, stock antenna, stock micro SD card, and manual. I will wipe/reset and reload the complete current radio reference database on it before shipping it to you.

$400 + shipping from Bedford Texas 76095 to your town or city in the Continental United States.

Thanks,
Lee, KE5UBF
Bedford, Texas

That's actually an AC adapter, not an AD adapter.. Wondering if I said something wrong here (other than that lol!)
I guess I should have mentioned I also have the original packaging, box, including the DC connector, and cigarette lighter plug, I also have the original sales receipt where I paid $598 for this scanner in February 2014. This was one of the first units, and although it was said to have a problem with the earphone/headphone connection, I never paid any attention to it, and instead just opted to keep my investment and take the extended warranty for 3 years instead of 1, which means there's still over a year's worth of warranty on this unit.

Personally, I'm kinda surprised it hasn't sold yet.

"Please excuse typhoons and autoconnections." Ha! Don't ya just love autocorrection?

$400 is a reasonable price, abet subjective. At least to start... Especially if the remainder of the warranty is transferable. I sold my GRE800 for that, AND insisted on waiting for payment to clear my bank first before I shipped it. (Wanted to use PayPal but the buyer wasn't familiar with it so I insisted on waiting for payment to clear.) let us know when it sells.

Just a friendly reminder to please conduct negotiations via direct email. Posting For Sale listings is fine (for the 536 or accessories) but please handle the negotiations and arrangements via direct email.

There are a few reasons for this including the fact that moderation could delay your reply and cause loss of purchase.

Thank you. (and no apologies necessary)

Did you format it using a formatter that supports FAT32? Note: Windows will not do this. Next, did you use the CLEAR USER DATA option in Sentinel? That writes the bookkeeping data. Last, write the card using Sentinel.

Joe,

I just today re-formatted my HP-1 card using Windows 10. Then I plugged it back into the HP-1 and used the CLEAR USER DATA. I then loaded the SD Card without issue.

I'm not understanding why it worked if it was not formatted correctly according to what you stated?

Topic: 2436 Message: 2443

I don’t want to stray too far off the topic, but it may end up helping someone. I’m beginning to think that the newer Windoze versions are smarter, and the format options depend on the drive size (very understandable). When I insert a 8GB USB thumb drive or a 32GB SD card into both my Win 7 laptop and Win 8 tablet, FAT32 is an option and shows as default. However, when I do the same thing with a 256GB SSD, FAT32 is NOT an option. So what I’m seeing must either be the FAT32 option due to the smaller sizes of the thumb drive and SD card… OR… just being able to keep the FAT32 formatting since that is the format to start with. I might wipe the thumb drive and/or SD card tomorrow when I have a little more time to see if I still get the FAT32 option when no formatting is already on the device. To bring this back on topic, that should be good news for Win 7 and 8 users who may have to reformat their cards.

If memory serves (hey, it happens!) FAT32 only works up to XX GB (don't remember all of the details). Beyond that size, other options are required (different layout, partitioning...).

>
> I don’t want to stray too far off the topic, but it may end up helping someone. I’m beginning to think that the newer Windoze versions are smarter, and the format options depend on the drive size (very understandable). When I insert a 8GB USB thumb drive or a 32GB SD card into both my Win 7 laptop and Win 8 tablet, FAT32 is an option and shows as default. However, when I do the same thing with a 256GB SSD, FAT32 is NOT an option. So what I’m seeing must either be the FAT32 option due to the smaller sizes of the thumb drive and SD card… OR… just being able to keep the FAT32 formatting since that is the format to start with. I might wipe the thumb drive and/or SD card tomorrow when I have a little more time to see if I still get the FAT32 option when no formatting is already on the device. To bring this back on topic, that should be good news for Win 7 and 8 users who may have to reformat their cards.

2446. Whistler WS1098 vs bcd536hp?

Yahoo group: BCD536HP

From: Evan Platt
Topic: 2446 Message: 2446

So ... this whole battery fiasco has me pretty upset with Uniden. My 436 keeps losing the time, and my 536 also - and my 536 freezes half the time I turn it on. So my 536 is pretty much useless. Uniden now has a fix for the 536. Great. However, my 536 is professionally installed, and I'd have to take it to a shop to get it removed (I'm not technically inclined enough to pull apart the dash / console to get to the scanner.).

So, I'm looking at 1 hour labor. Twice. One hour to get the scanner removed. I ship scanner to Uniden, wait for repair, get scanner back, take scanner back to shop, shop installs scanner. One more hour labor.

Or, Uniden could practice this thing called Customer Service / goodwill and ship an advance replacement, and I ship my scanner back to Uniden when it's swapped, so I only get charged one hour of labor. But Uniden says no.So now it will be around $200 to have this scanner 'repaired.

I need to make the decision, do I spend $200 to repair the 536 or should I hold out a little longer for the Whistler 1098?

I made it very clear to Uniden regardless, this is really poor customer service, and this will be the last Uniden product I buy, but they don't seem to care, they already have my money.

The freezing can likely be solved with a new SD card.

As for the install, if they used the DIN mount, removal is a simple process of sliding the two keys into the slots on the sides and pulling the unit out. If they are professional, they will have left enough slack in the cables to allow full removal before they are unplugged.

Another option is to purchase your own spare unit rather than expecting Uniden to provide you with one. Good customer service in my opinion does not mean providing you with a loaner while your scanner is fixed. You would still have two removal/installs. The only difference is that you would have a scanner to use in the mean time.

Or you can simply use your scanner as-is. It is your choice.

I would be more leery about a shop that charges $100 for 15 seconds of work... TWICE. If you lived closer to me, I would charge much less. Of course if you were a friend and I installed it, I would likely not charge you at all for the removal and reinstall.

well, this isn't a standard install. There's a bezel aound the dash that needs to be removed and a metal 'bracket' around the scanner and FM radio that need to be removed. It's not an hour job, It's also not a 15 second job. realistically it's 15-20 minutes. Most shops I've seen charge minimum 1 hour labor.

http://www.espphotography.com/carsetup.jpg

I know it's a low res picture, but that should give you an idea. That wooden 'bezel' needs to come off (quite a few tabs you have to pry and very careful as they break easy) and then a metal bracket around the radios.

But again, I'm not asking for a loaner, I'm asking for advance replacement - they send me a refurbished 536, I send them my 536, and that's it - 'even' exchange. With the whole fiasco of the android app, wifi, time, etc, I see no reason Uniden shouldn't go a little out of the way to salvage customer service.And yes, I did try a brand new SD card, same thing - scanner freezes half the time on power up.

Understood.

How about this:

Buy a used 536. If it has the issue, send it in for repair.
When you get it back, take it to the shop and have them swap it out.
Then either sell the original one or get it repaired and sell it for a
little more. Or keep it as a home unit.

Selling the one you currently have should result in the one-time shop
charge and little to no additional money out of your pocket - you may
even make some money if you're selling a unit that has the issue fixed
already. That would offset part of the shop charge.

If it were me installing the unit, I would most certainly have used the
DIN mount, but I guess they elected for a more complex installation.

Evan,

I too have custom installed my 536 in my truck. And I will also have to remove it for the clock repair. The difference is, I installed it so I know how to uninstall it. I will do the work myself. All of which has NOTHING to do with Uniden. Uniden didn't tell us to custom mount it in my truck or your car, but they sure look great, don't they? It's a crap shoot when determining how many times we will need to remove/replace the scanner. Ideally, just one cycle... We install, and when we sell the car or upgrade the radio, we remove. But we got stuck with a scanner that has some outstanding corrective actions requiring it be returned. Nice try, your failed attempt getting Uniden to send you a replacement but it's not their problem.

And it should be pointed out this topic has more to do with a problem relating to install costs you anticipate yourself incurring. Which is off the topic of this group in my estimation.

Sorry for your issue,

Bill

Evan,

Very few businesses will do the swap you want, it simply impacts the available sales stock too much and is a fair sized financial risk even if they put a hold on a credit card before shipping. Then, by law, they can't sell the one you returned as new, (can as refurbished) creating a further impact on their economy. It isn't reasonable to ask them to shoulder that burden because one of their part suppliers sold them defective parts. They're fixing it on their time and dime, except for you shipping it in.

It's not Unidens fault that you have a custom install. That can't be put on them. It was clearly your choice and lack of a DIN mount install was part of that choice. It's posted as an option online and is clearly the better choice (then you'd pop the bezel off, unlock each side of the scanner, it'd slide out). If it is tucked THAT far into a dash, then heat collection becomes a concern (it'd get hot); that's bad.

Uniden fixed the wifi, has an app for computers and iOS. Android is under construction; all were/are late.

Most folks use their 536 on a desktop, table or under a dash. So for most, it is simple to remove, then return the scanner for the repair/upgrade.

You're the exception, choosing a shop to do a custom install. Again, it's no one else's fault or responsibility. It's no surprise that Uniden doesn't want further a exception by sending you a replacement unit.

Purchase of another scanner is one option, IF that scanner already has the repair in place. Taking advantage of the DIN mount would have been a better choice and the shop should have asked you about that. Maybe it can be added this time.

You can also use the scanner located in a trunk or under a seat, access by any Android (use VLC), iOS device (Siren) or tablet computer (if local laws allow that). Then you have full anytime access, as needed.

Threatening Uniden or degrading them online will have minimal impact and they honestly might appreciate it if you bought elsewhere next time to lower their noise level.

You've complained about the SD card before. I'd start there again to see if it resolved the running condition. The clock is a really trivial thing only used if you record to disk and then only to keep the files in order. It simply is not enough for me to worry about.

The 536 freezing can be cured by installing a new sd card, an $8.00 fix. You'll need to do a few steps including formatting the card and clearing the user data through Sentinel. If you are interested in this easy fix, at least fr now, I'm sure someone can point out the link

If you don't need to time/date stamp audio files, you probably don't need to have to recall performed in any hurry.

We hashed all of this out about a year ago... All the ins and outs were discussed, Din sleeves, bezels, custom install in a non-standard vehicle, etc. and here we go again.

Bottom line is I feel for ya. Sincerely, I do. But come on already, your not going to start this all over again? Nothing has changed. If you could afford to do the initial custom install, at $100, you also expected to shell out another $100 when it came time to remove. So have them remove and return the dash to stock. Don't put the radio back in the dash, instead, mount it elsewhere. Better yet, check out the local high school and trade school vocational shops. You may get it done for less money. Or get a buddy to do it for free.

But we got stuck with a scanner that has some outstanding corrective actions requiring it be returned. Nice try, your failed attempt getting Uniden to send you a replacement but it's not their problem.

And it should be pointed out this topic has more to do with a problem relating to install costs you anticipate yourself incurring. Which is off the topic of this group in my estimation.

Sorry for your issue,

Bill

On Oct 20, 2015, at 5:43 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

So ... this whole battery fiasco has me pretty upset with Uniden. My 436 keeps losing the time, and my 536 also - and my 536 freezes half the time I turn it on. So my 536 is pretty much useless. Uniden now has a fix for the 536. Great. However, my 536 is professionally installed, and I'd have to take it to a shop to get it removed (I'm not technically inclined enough to pull apart the dash / console to get to the scanner.).

So, I'm looking at 1 hour labor. Twice. One hour to get the scanner removed. I ship scanner to Uniden, wait for repair, get scanner back, take scanner back to shop, shop installs scanner. One more hour labor.

Or, Uniden could practice this thing called Customer Service / goodwill and ship an advance replacement, and I ship my scanner back to Uniden when it's swapped, so I only get charged one hour of labor. But Uniden says no.So now it will be around $200 to have this scanner 'repaired.

I need to make the decision, do I spend $200 to repair the 536 or should I hold out a little longer for the Whistler 1098?

I made it very clear to Uniden regardless, this is really poor customer service, and this will be the last Uniden product I buy, but they don't seem to care, they already have my money.

Nice picture. That's a double din install. That's the metal bracket around both radios you related to. The tabs are to mount the double din bracket. It stays. No tabs to mess with. The radio simply pulls out from the front. And yes, the radio is out in the time it took me to write this! I've been in the business for decades so when I say you are getting a snow job, or its a gross communications misunderstanding, I know what I'm talking about. Take that car to another shop and get a second opinion.

On Oct 20, 2015, at 6:50 PM, Evan Platt evan@... [BCD536HP] <BCD536HP@yahoogroups.com> wrote:

well, this isn't a standard install. There's a bezel aound the dash that needs to be removed and a metal 'bracket' around the scanner and FM radio that need to be removed. It's not an hour job, It's also not a 15 second job. realistically it's 15-20 minutes. Most shops I've seen charge minimum 1 hour labor.

http://www.espphotography.com/carsetup.jpg

I know it's a low res picture, but that should give you an idea. That wooden 'bezel' needs to come off (quite a few tabs you have to pry and very careful as they break easy) and then a metal bracket around the radios.

But again, I'm not asking for a loaner, I'm asking for advance replacement - they send me a refurbished 536, I send them my 536, and that's it - 'even' exchange. With the whole fiasco of the android app, wifi, time, etc, I see no reason Uniden shouldn't go a little out of the way to salvage customer service.And yes, I did try a brand new SD card, same thing - scanner freezes half the time on power up.

Try Best Buy they might take it out put it back in for under a hundred. Just don't start talking about the other shops charging you to installed it and take it out or they will do the same to you charge big money. Some of them guys take side jobs do it at their house.

You can't get to the radio without removing the wooden bezel. That's the tricky part to remove. That has the plastic tabs, and connections to the a/c, hazard lights, etc.

The custom install initially was done as trade work. I traded a few items I no longer needed for the labor for the install.

Yes, I anticipate when / if I get rid of the car to shell out something to get it removed, obviously. But now we're talking TWO installs to get it removed then put back in.

I'm certainly open to suggestions as to where to mount the radio, but as you can see, it's a Hyundai. There's literally nowhere else to mount it. And regardless, I'd STILL have to pay twice for labor to get it installed when it comes back from Uniden.

I guess I'm the only one that thinks Uniden should think outside the box and try to go above and beyond for someone that spent over $1,000 on their top of the line products which were plagued with problems, and now I'm at the point where I won't buy another Uniden product.

Ever.

Customer service used to mean something. I guess it doesn't for Uniden.

No, there's no way for the 536 to get time from GPS. Well - technically, it COULD from what I understand but Uniden won't implement that.

And yes - when the 536 powers on, if you have the latest firmware, it should prompt you to enter the time, and if you don't, it picks a arbitrary date / time.

I think the point here, made quite well by others, is that your perspective on customer satisfaction is having the mfg do whatever you feel is appropriate.

You are entitled to want more than they'll give you, but that doesn't mean they don't provide some measure of customer satisfaction.

If this was a foreseeable issue, then perhaps they could do more. But the bottom line is flaming them publicly in a newsgroup likely won't change their policies.

We all feel your pain, and it's the same pain whenever you buy something that doesn't live up to expectations, or causes unwanted added expense.

We seem to live in a society where we expect someone else to do something for us when things don't go our way. Need to suck it up that maybe you did something to increase your pain/costs, and that choice was yours, not something the mfg forced you to do.

Regards and 73's,

Dave, KB3YCK

There have been a number of issues with these scanners, especially the 536HP.

First the headphone jack issue, for which Uniden issued a repair campaign similar to this one. That was traced to a manufacturing issue where some units had an incorrect component installed.

Then there was the WiFi dongle issue. Which turned out to be a driver/firmware issue which took longer than anyone (including Uniden) to resolve because the issue lay with an outside supplier.

There is the dim display issue, for which a fix seems to have been developed and if you send in your 536 for the RTC fix and attach a note, Uniden will evaluate and repair as needed.
